Heh heh heh. The "Seig Heil" is, etymologically speaking, a
SALUTE...as in the speaker meaning "we salute you." :-)

What is interesting is the reverse psychology to The Big Lie
technique of the late 1930s' national socialist partei changed
that to be some kind of sole honorific to Adolf Hitler.

The major cause of the reverse psychology was a rather good
(technically speaking) totally-slanted "documentary" done by

a German gal with the given name of "Leni." :-) :-)

>>> >> But it just had to be done, didn't it?
>>

>The choice, Sir, was not yours to make - you simply could not resist
>doing so.

I mentioned a trilogy by novelist Len Deighton the other day.
Here's another trilogy by the same author, same characters, etc:
"Hook, Line, Sinker." :-)

I may have to market my bait. Sounds like its a money-maker!
It appears to be irresistable!

>>> >Is there a problem with >that? Do you think Len's slurs

Had you two been turned around on that, Jimmie would DEMAND you
SHOW THE QUOTE!!!! :-)

Jimmie thinks he be barrister in the Queen's Bench. His wig is
on crooked...

>>
>>> (a reference to the bumbling and
>>> comical 'Nazis' on "Hogan's Heroes")
>>
>>The Fuhrer was a feldwebel in WW1
>
>Godwin invoked.

Tsk, tsk, tsk. Jimmie not know that the title of "fuhrer" (with
an emphasis on the second syllable, not the first) is an old, old
European military title of French origin. It means a grade that
is usually in between the underofficer (NCO) and "commissioned"
officer...vaguely like the USA warrant officer...and means simply
"leader."

It's use got remarkably altered from origin to later times, much
the same as the word "ham" went from its original "bad, sloppy,
non-professional" radio operation to glorious noble champion of
all radio, the amateur.

>>>
>>> - always has been, always will be.
>>
>>That claim is incorrect. Usenet is not eternal.

[only Jimmie eternal...]

>>jackass behavior. Is that about right?
>
>Nope. You have avoided the question.

Jimmie do dat a lot. Mucho so when he totally pissed off. :-)

>>Perhaps you have a valid point, since if what Len seeks is
>>attention, pointing out his typical immature ethnic-slur
>>Godwin-violating bad-pun Unknown-Soldier-insulting jackass behavior
>>gives him that attention.

[K4YZ use "PUTZ," "coward," "dishonor" etc and dat be okay]

[anyting use by PCTA okay...anyting by NCTA be "immature
ethnic-slur, Godwin-invoking, jackass behavior" if not
praise PCTA and morsemanship......:-)]

>>> (73 de Jim etc. sig missing again)
>>>
>>Not missing - omitted.
>
>In a fit of pique? As an insult? Forgot, maybe!
>
>Lid-like behaviour, wouldn't you think?

Jimmie need to "put a lid on it..." :-)

>>The original meaning of "73" is "a friendly greeting
>>between operators". In the context of amateur radio,
>>this means between amateur radio operators.
>
>In the words of Hans - thank you, Captain Obvious!

Jimmie try to be cross between Miss Manners and Sister
Nun of the Above. Jimmie get as far as "cross."

Tsk. Origin of "73" (as well as "88") was among COMMERCIAL
telegraphers of the 1800s. Just a shorthand by them to cut
time in standard ending salutations common to written comms
of that era.

>>
>>It would be inappropriate to use the greeting to
>>someone who is not an amateur radio operator.
>
>Which I am. And have stated many times before.
>
>Poor memory? Google 'er up.....

Tsk, tsk. Jimmie, representative of the "amateur community,"
dons his barrister wig and robes and proclaims "appropriate"
and "inappropriate" behaviour (especially with his "you") by
"all hams." Looks impressive but is dumshit behavior by
self-proclaimed, self-righteous ruler-spank by Sister Nun of
the Above.

>>> 73, Leo
>
>(73 de Jim omitted apparently intentionally - boo hoo :))
>
>73, Leo.

Heeheeheeheeheeheeheehee.........

Ok, one more round but that's it. All the licensing requirements are arbitrary. Every single one of them. There are several radio services for which no testing is required. So if some services do not need testing, then it is arbitrary for those that do. However the goals and purposes of amateur radio make it desireable to test candidates for these licenses.

> If you wish to discontinue healthy, legitimate discourse with respect
> to amateur policy, I understand. It is not for the faint of heart.
>
> Best of Luck, Brian
>

The problem with the Morse discussion is that every possible conceivable argument on either side has been aired dozens, if not hundreds, of times. It is not healthy to continue discussing this policy issue. No new data comes to light. No new rational has come up. There's no point in rehashing the same issues. Sooner or later the FCC will rule and we'll all have to live with the consequences good or bad.

If the result is as the NCTA state that it will be, i.e. a big wave of new hams plus a big wave of hams upgrading and getting on HF, just watch the DX stations, especially the rare ones, hide down on CW even more than they are now. If you exclude Japan, the US has more amateur radio operators than the rest of the world combined. If the bands get as busy as the NCTAs imply they will from this rush of new and upgrading hams, a lot of us will be drifting even more to CW just to find some room.

On the other hand, if the PCTAs are correct, i.e. the impact will be insignificant just as other changes of the recent past have been, then there is NO reason to change the requirements. Changes that have little to no noticeable impact aren't worth the bother of implementing.

>

Well I'm a lady engineer/ham who lusts for a nice, quiet antenna farm in the country and am married to a city boy. However, he's also a ham and happens to like the quietness of the rural areas. But the work is in the cities. Oh there's some engineering jobs in rural areas and I used to take those. But then when the company cuts back, you are automatically slated to move when you find a new position as it sure isn't going to be in that rural area where you worked at the only firm using engineers. Moving every 5 years or so got old fast.

That is my opinion too. There's another factor that crops up. Women do not like to just arbitrarily change jobs in search of higher pay or a promotion. They prefer stability. So they seek out and stay with those firms that seem to fit that bill. There's been some sort of study that I read somewhere on that. The end result is that they rise up the wage scale and promotion scale more slowly. The men who get ahead rapidly are usually those who make judicious job changes every 5 years or so in the early years of their careers.

Doesn't bother me in the least. Nor are my beliefs shaken. It is simply a waste of your time and my time for either of us to continue further when it is quite obvious that each of us is firm in our point of view.

Who say "big wave on HF coming if no code test?" Who? WHO?

Show reference, show work.

> If you exclude Japan, the US has more amateur radio operators than the
>rest of the world combined. If the bands get as busy as the NCTAs imply
>they will from this rush of new and upgrading hams, a lot of us will be
>drifting even more to CW just to find some room.

Ham bands get crowded? Hams ask for more bandwidth. Simple.

Ask ARRL to lobby for more bandspace. ARRL "representative of 'all'
hams."

Not too swift. ARRL try to get new band at 60 meters, get only
five channels. League not very good now. Why not?

PCTA Elite at "inside" of league, should be able to effect what
they want. FCC no give. Why that?

>On the other hand, if the PCTAs are correct, i.e. the impact will be
>insignificant just as other changes of the recent past have been, then there
>is NO reason to change the requirements.

Old = Good. Change = bad.

> Changes that have little to no
>noticeable impact aren't worth the bother of implementing.

"I'm all right, Jack!" [old Brit saying]

"We've got ours, nyah, nyah, nyah" [old childhood taunt]

All must show DEDICATION and COMMITMENT to AMATEUR COMMUNITY
by learning and testing for morse code! [PCTA mantra]

Meanwhile, since 1991, that no-code-test (horrid!) Technician
class license got OVER a HUNDRED THOUSAND *NEW* radio amateurs
BEFORE restructuring. Many, many more new than all the other
old classes combined and the only ones which contributed to

holding the average total licensee numbers not quite constant.

Right now, the two Technician class licensees make up 48.4%
of ALL invidual (non-club) licensees and it keeps rising and
rising and rising. Why that? The Novice class, the supposed
"entry level" license NEVER grew like the no-code-test Tech
numbers. No way. You don't suppose the (dedicated, committed)
code test could have anything to do with it, do you? Of course
not. The dedicated, committed amateurs would "always" struggle
and work to learn code, the best of all possible modes, right?

Ho hum. The "arguments" continue with the PCTA Extras NOT
listening. They will not accept arguments against their beloved
code test. They are manly macho morsemen, dedicated and committed
to their "service." None shall naysay them, no way.

Screum say I (in a most non-gender-specific way, of course).

Yours most sincerely and with all best wishes,

LenAnderson@ieee.org

Real hams don't have buttons...just code keys and rotary knobs
and switches, lots and lots of them... :-)

Jimmie and Stebie and Davie all try to manufacture as many
"buttons" as they can. Tsk, tsk, they find that those "buttons"
don't connect to any of my circuits, don't do anything. :-)

But, they hang in there, wearing out their pudgy lil fingers,
pushing, pushing, pushing. Parallel-connected triodes in
"push-push" connection, running unneutralized and breaking into
oscillation at the least disturbance! Tsk, tsk.

>> Stalemate. Looks like everyone is getting exactly what they want.

That's your choice, maybe you shouldn't try things that pain you, like ham radio.

--but I pity you and your juvenile
> attempts at gaining attention... even to the point of provoking negative
> acknowledgements...

Let's see now, a ham post how he had fun with his 7 year old operating ham radio at kids day, and all you can come up with is how millions of children access the Internet, how ham radio pales to the Internet without barriers as if to say his child must be stupid to even think of ham radio which would require learning something to obtain a license.

Talk about negative, all you can do is run down ham radio, you jump at any opportunity to slam ham radio and how it poses barriers to anyone who might be interested. Just go back to you cb johnnyboy, there aren't any barriers there past knowing how to turn a cb radio on, which just might be a 'barrier' to you.

I think, after she stated that ALL exams are arbitrary, that she decided to duck and run. Apparently, none of the PCTA heard her remark, which included the Morse/Farnsworth exam. Right now she's zagging across the lawn in Newington, looking for sanctuary.

> Jimmie can't bear to acknowledge that the current percentage of

That was good advice. I did the same thing. I had my Novice for 3 months, skipped the Technician, and got the General. I could have got on 2m AM as a Novice. I had a Gonset II on load from Civil Defense. I flat refused to do so until I got the General. Glad I did.

I'm not stating that there will be hordes of unwashed nor waves of
intelligent technogeniuses. But if the code exam remains, I don't
think there's much hope of anything positive happening.

Of course, I disagree. I think it is worthwhile to have regulations and a licensing structure which makes sense, regardless of negligible impacts.

Yep indeed....it was "up or out". Novice good for 1 year, non renewable
and can't get it again. Talk about incentive licensing.

A very good friend mine, Ray, K8DEN recently passed away. I am so happy
he finally was able to get on HF. Thats right as a 5wpm General. He was
like you said, just could NOT learn the code. Whether physical or mental I
don't know.

Yes indeed VHF back then was tough. But it was fun. I had it both ways. I
was on CW on HF and phone on 2m AM. Loved them both.

It is much easier for the beginning ham now than it was for us Jim. Perhaps
it is too easy and that is the problem.

Perhaps the FCC should sent out invitations to upgrade if they want so
desperately for it to happen.

Not a clue as to what else is out there.
What a shame the dont.

That is what I meant and you know it.

Yep I am an extra, so what? I've been one since I passed in in front of
the FCC in 1977. Again so what?

I spend most of my time talking with, as you think, lower class amateurs.
Most of my SSB on HF is in the General sub bands. Most of my CW is the
same. ALL of my VHF is in the Tech sub bands, and I operate there a LOT.

Don't come off with this crap that I have a problem with the Tech ticket.
Screw you N0IMD.

You lose again, as usual wogie, but now that you mention that blog site
I will go see what is has to say. Didn't even know about it until now,
so thanks, there will probably some really funny reading there about you.

> Word for word. You are nothing but a lousy plagiarist.

Didn't use anything word or word wogie, just read on a newsgroup where
someone said you ex-wife claimed you wet the bed. I bet she was right.

> You still
> fucked up though, since you can't find Roger's ex-wife to begin
> with.

Why would I want to find your ex-wife wogie? I doubt she would ever
admit to knowing you anyway.

> You and Lardass Davies have made about 3 different guesses
> and they've all been wrong. So any thing you say about him
> regarding his ex-wife and wetting the bed has no credibility.

Face it wogie, you lost when Riley made you retest because of your
jamming actions on the air. BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!

Funny how Riley made you retest to keep your license after you were
caught jamming on 20 meters. BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!

>
>
> Still waiting on proof you have a pilot's and 1st class

Still waiting for you to name a time and frequency for a little cw
practice, two-test. Of course you won't because we all know you can't
copy cw. BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!
>

Still think I live in Missouri just because that is where my ISP is
located wogie? You think everyone who uses AOL lives in VA wogie? You
think everyone who uses Earthlink lives in Atlanta wogie?
Poor wogie, dumber than a bowl of dirt.

Well, dumbass, you got it from that website on blogeasy.com.
Word for word. You are nothing but a lousy plagiarist. You still
fucked up though, since you can't find Roger's ex-wife to begin
with. You and Lardass Davies have made about 3 different guesses

and they've all been wrong. So any thing you say about him
regarding his ex-wife and wetting the bed has no credibility.
Just like you.

> >
> > Funny how the retest letter from the FCC gives no indication

> > BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!
> > You lose as usual.
>
> Funny how you had to retest to keep your license after you
were caught
> causing malicious interference on 20 meters, you lose as usual.

Funny how the retest letter didn't specify that, plagiarizing
Butt Cornholer. In fact the only reason given was:

"Pursuant to Section 97.519(d)(2) of the Commission’s
Rules, 47 C.F.R. Section 97.519(d)(2), the Commission has the
authority to re-administer any examination element previously
administered by Volunteer Examiners (VE’s). The Commission
may either administer the examination itself, or under the
supervision of a Volunteer Examiner Coordinator (VEC) or VE
designated by the Commission."

Face it, dumbass, you lost, that's the only reason (well,
besides your Altzheimer's) you keep whining about something that
was 5 years ago and besides, Roger passed the test and
upgraded... you can't even do that.

BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!

> Still waiting

Still waiting on proof you have a pilot's and 1st class
radiotelephone commercial license.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!

Then there's room for doubt. Perhaps you are an amateur radio
operator, perhaps not.

> Starts with VE3, though - issued in 2002.

Maybe...

> >You can state almost anything here, but as long as you
> >remain an "anony-mousie", there's room for doubt.
>
> LOL! Anony-mousie? That's a Len term.

Yep.

> You may not like the guy much, but you seem to be learning from > him!

I've learned some things from Len. For example, I used to think
that he might be capable of a reasonable discussion on amateur
radio policy issues, even with those who disagree with him. I learned I
was wrong about that...

> Good for you.
>

That's easily disproved, Leo. Just look at how many posts Len
makes that I don't respond to. Then look at how many I make that
he responds to. Also look at the tone and content of the responses.

Just a suggerstion.
>
> Doesn't look like a choice - more like an obcession.

By whom? Not me...

> can't push 'em!

??

If you let kids know where the buttons are, they'll push 'em
constantly.

Speaking of "buttons", it's clear that Len has the most "buttons" of
all. All anyone has to do is hit his big button (disagree with
him on the code-test issue) and then Len will respond in a very
predictable, negative, attacking, insulting way to almost anything the
person posts. If someone who has hit Len's Big Button dares to point
out a mistake (even a minor one)
in one of Len's posts (such as the in-service date of a particular
Soviet aircraft, or the legality of US hams operating with
expired-but-in-the-grace-period licenses...well, the results
are all there in Google. Not pretty, either.

For example, some time back I posted info about a new War Museum in
Canada. (I don't recall the exact correct name of the museum right
now). I pointed out that some of the windows spell out a message in
Morse Code.

Len, of course, went ballistic in one of his typical tirades. You'd
think I'd said something truly awful by pointing out the windows. I
don't know why he reacts that way - it's just what he does.

But don't ask Len what JT65 is...

73 de Jim, N2EY

>
>Nope. With good reason.

I'm sure that we'd all love to hear your good reason for resurrecting
the work history of the long departed Fuhrer back there, Jim - please
share!

You of course realize that there is a school of thought that
invocation of Godwin's Law can be interpreted to include any such
reference to that - um - Teutonic regime of the 1930's and 1940's?

Especially the Big Guy himself?

Oh - I forgot - you said you use another interpretation of that
rule.......

Well, that's a bit childish, but it is Fathers' Day, so I'll help you
out a bit here.

Because you should! Why should you let the behaviour of others
negatively influence yours?

If Johnny jumped in the mud, would you jump in the mud?

Jeez. Kids these days!

>
>Zing! Was that written in a fit of pique? As an insult?

Of course not! Simply an illustration that, in the absence of
conclusive and irrefutable proof, one has no other means to ascertain
whether another individual is misrepresenting themselves other than
the evidence that they present in their posts over a period of time.

So far, we haven't seen much of anything posted that would support
your claims of post-grad education - no thesis references, no detailed
insight which would require that level of training, no written
expressions of advanced theoretical knowledge. A few moderately
complex calculations, perhaps - some correct, at least one not by a
long shot.

In short - your word is all we have.

One can choose to doubt anything at all, Jim. You can. I can.
Anyone can.

But to choose to doubt someone simply because they no longer appear to
agree with you or support your views - doesn't seem particularly
brainy, now does it?

You see where reasonable doubt might creep in - right?

>>
>> But don't worry - I believe you! :)

It's a NEW "Godwin" observation in here. Whenever someone goes
against the league-published grain of the olde-tyme hammes, they
are immediately labeled "slamming ham radio" or, in Danterms,
"agitator and disgrace." :-)

Them olde-fahrt morsemen gotta have...:

> >> ALL shall march to the same drummer, in ranks, with one voice
> >> counting cadence as taught in the Church of St. Hiram. NONE
> >> shall speak against the Elite, the PCTA Extras.
> >>

>> ARS only has "fun" when all licensees do as the Elites do, that
>> is, doing narrowband morse beeping.
>
>And one keeps asking me where the Techs have gone. Hi!

They haven't gone to the "lower part of the bands" (on HF).

Olde-fahrt morsemen ought to be very happy. :-)

They aren't. Still so ANGRY!

>> The LAW is the LAW and NO LAWS CAN EVER BE CHANGED according to
>> these "guardians of amateur paradise." Code test MUST remain.
>> PCTA say so. No arguments against. Period. [sigh...]
>
>There must still be some of them working for the FCC.

Must be. Or FCC cares so little about amateur radio that they
aren't doing anything about those 18 Petitions. No sign of
reaching a decision on which or what.

>> Happy Father's Day to you, Brian.
>
>And to you, Len.

Thank you. Maybe next year it might be (for me) "great-grand"
instead of just "grand." :-)

Watch for responses to THAT little gem! :-) Davie gonna
chime in with "all those years you said you were 'interested' in
radio you never got a ham license!" Tsk, tsk, Too bad I got a
commercial ticket and then went into the electronics industry,
huh? :-) Sister Nun of the Above gonna try some ruler-spank
on that, too, lotsa stuff about "how many children I parented."
Sister NOT say how many he have parented...will ignore and
try misdirection to avoid answering.

Lotsa fun wid dese PCTA Extra folk allatime "sitting in
judgement" and hollering "order in da court!" :-)

"Book 'em, Danno!"

beep, beep

>
>Dipshit/Dumbass

Plenty WRONG, "dipshit dumbass Dan." FCC did NOT "want anyone" to
do anything but obey the law.

Here's a clue, you southern-fried Einstein: FCC is NOT in ANY
position to endorse or motivate any radio amateur. They aren't
charterd by Congress to do so.

"Wanting anyone to upgrade" is a subject for clubs and private
organizations. Mostly that means the ARRL. Here's another clue:
The ARRL does NOT regulate U.S. amateur radio...regardless of
what they infer.

Sunnuvagun! [thank you Hans for originating that into the
mainstream of American colloquialisms over a
century or so back... :-)]

>> Thanks for the insight into the "Mind of Dan."
>
>Just tellin the truth and you cain't stand it.

Tsk, dipshit dumbass Dan, the southern-fried Einstein (wannabe).

Good luck with that now...

Ain't that the truth! :-)

Again I'm reminded of a science fiction movie..."Logan's Run"
when Logan and Jessica were on the run looking for Sanctuary
and encounterd "Box" in the freezer... :-)

"Box" froze everything. Seafood, runners, etc. Like the
archaic rules about even older regulations. Gotta keep it all
FROZEN in the freezer. Nobody gets away. No thawing of
anything. All cold. Beep, beep, brrrr, brrrr.

Logan and Jessica got away. "Box" got disassembled. Tsk.

Tsk, tsk, Michael. The "horrid-ness" wasn't about a particular
person, it was about NOT HAVING CONTROL OVER WHO POSTS!!! :-)

The PCTA desperately want to hang onto "control" of content in
here, negating any of that heretic talk of (shudder) removing
the code test! PCTA want everything in here just like ARRL
approves, like this is just "Newington South." Everybody be
nice-nice to morsemen, etc.

It shows that the word "feldwebel", when it was used in connection with
a specific person, has Godwin connections.

> You of course realize that there is a school of thought that
> invocation of Godwin's Law can be interpreted to include any
> such
> reference to that - um - Teutonic regime of the 1930's and
> 1940's? Especially the Big Guy himself?

Oh sure - but the classic interpretation is that Godwin only
applies when someone refers to another in such terms. Which
I have not done.

That school of thought reminds me of the episode of "Blackadder III" in
which two characters are superstitious about the name of
a particular play by Shakespeare - supposedly, saying the name brings
bad luck. They refer to it as "the Scottish play", and if
someone says the actual name, they have to do an elaborate ritual to
excise the evil spirits.

Of course Blackadder says the name of the play for them at every
opportunity.
>
> Oh - I forgot - you said you use another interpretation of that

> >
> >Thanks!
>
> Actually, it is neither an answer nor a refusal to answer. It > is nothing at all.

No, it's a valid answer. Look at the way opinion polls are
usually structured - they often have a six-choice scale, to be applied
to each statement:

Strongly agree
Agree
Neither agree nor disagree (no opinion)
Disagree
Strongly disagree
No answer

Often the last is implied - if the respondent doesn't choose any of the
first five choices, the sixth is applied.

> >> In short, I have
> >> no answer to your (rhetorical) question.

> negatively influence yours?

It's a question of fairness and equality. Also experience with
what is done with the information provided.

> If Johnny jumped in the mud, would you jump in the mud?

Not a valid analogy. Try this one:

A neighbor is always asking to borrow your tools, but won't lend
you any of his. If you get a tool back, it's dirty, broken or both.
Meanwhile he keeps his tools in perfect condition.

Should you keep lending him your tools?

Wipe your grandkids' cum off of your cheapassed keyboard the "8"
key is adjacent to the "u" key, stupid, it looks like a simple
typo, unlike your fucked up spelling of "slobbered" above.

> Drunk at the keyboard
> again wogie?

Butt Cornholer makes good spell ...What's "Two-test" "Wogie"
"slobberd?"
Is your colostomy bag full again? I notice you didn't deny

Poor Butt Cornholer, he can't even do 5 wpm, he sure can't pass
the Extra 20 wpm or he would have gotten his Extra Class when it
was 20 wpm if you can do 30 wpm as you "claim". But, like
everything else you claim it is always unsubstantiated.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!

Keep flying those model airplanes and dream you actually have a

Therein lies the heart of the issue. There are some in here who respond all out of proportion to others missives. We have them on both sides of the Morse/no Morse issue.

Jim, you are obviously not one of them.

At least for me, when someone gets too abusive, I just don't bother to reply. Does that mean they "win"? Only as much as anyone wins one of these protracted whizzin' contests in here.

It's all entertainment. 8^)

I don't wear one wogie, but if it did it would be full of you.
Notice you never denied wetting the bed. Poor two-test, wets the bed and
had to retest to keep his license.
>
> Poor Butt Cornholer, he can't even do 5 wpm,
'
Put up or shut up two-test, name the time and frequency. We'll see if
you can even copy 2 wpm.

> he sure can't pass
> the Extra 20 wpm or he would have gotten his Extra Class when it
> was 20 wpm if you can do 30 wpm as you "claim".

Really? I have no need for an extra class, I can work all he stations I
want with the Advanced. The only way you were able to make the Extra is
because it only requires the 5wpm test now, but you can't even copy 2wpm
now. BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!

Name the time and frequency two-test hide-behind-the-curtains fatboy and
we will see if you can copy any cw.

Yep.

> Jim, you are obviously not one of them.

I hope not!

But it can get a bit odd to point out (in a nice way) that someone has
clearly
misunderstood something in Part 97, or has a couple of relevant facts
wrong,
and then be set upon as if I had desecrated a national monument.

Or to be blamed for what someone else has posted. (KH2D, a PCTA Extra
named
Jim, has obviously offended Len, so he takes it out on me, a PCTA Extra
named
Jim...)

Or to be quoted as writing things I did not write. (N0IMD's misquotes
of what I
wrote about the code test and its incentives for code use).

> At least for me, when someone gets too abusive, I just don't bother to
> reply.

Yep - in some cases I simply stop reading what they write.

> Does that mean they "win"? Only as much as anyone wins one of
> these protracted whizzin' contests in here.

The question comes down to whether or not one should allow an error of
fact
(not opinion) to go uncorrected, or to allow a misquote to go
unanswered, or
to engage in a multiround series of posts correcting the error of fact
or
the misquote.

>
> It's all entertainment. 8^)

When is "back then?" And how can an LOS path be "busy" in a
non-urban area? Picture sitting around waiting for ducting or
temperature inversion to reach out beyond 30 to 40 miles...

>> The other choice was to work on your code. The novice license was issued
>> for one year and was not renewable. I took this choice and it took me a

So? I traveled 90 miles by train to the Chicago FCC office for
my First 'Phone test. No snow and I kept my shoes on all the way.

>> Of course, there were those that were only interested in VHF and above.

The Army's Project Diana proved the feasibility of moonbounce
right after WW2. 70 to 90 MHz and 250 MHz VHF radio relay was
already operational at that time and capable of working 24/7.
Aircraft radios were already up in VHF via the SCR-522 and the
last versions of the ARC-5 sets. Many, many VHF radios for
vehicular mobile were working away, first for the military during
WW2 and a few police departments before WW2...FM of course. TV
broadcast had already begun right after WW2 on VHF and production
was beginning to ramp up for the virtual explosion in set making
for ordinary consumers. AT&T was planning the microwave links
that would span the country and making the prototypes in the lab.
FM broadcast had already started on low VHF and was reassigned
at double the frequency after WW2. Consumers could get "AM/FM"
table model radios off the shelf. Raytheon near Santa Barbara,
CA, was testing something new called a "Radarange" that would
shortly afterwards evolve into a microwave oven...and would be
sold entire (big mistake financially) to Amana. All that taking

place in the latter half of the 1940s.

USA amateur radio was all about "working DX on HF with CW" at
the same time...real "radio pioneering." Read all about it in
library copies of QST.

>> Moonbounce was just starting to happen and dx records at 1.2 GHz and above
>> were likely measured in miles. Not many. A very low noise pre-amp on 440
>> MHz probably had a 4.5 dB noise figure. Once you headed into microwaves,

>> most from operation much above 500 MHz. There were lighthouse tubes,
>> travelling wave tubes, and others (I had a couple of gizmos that looked like
>> Sputnik. I never knew what they were intended for LOL).

Vacuum tube transit time was an already known phenomenon prior
to WW2. A magnetron was a vacuum diode...it's path from cathode
to plate(s) was MUCH longer than a wavelength at 10 GHz yet it
worked quite well at high-KW power levels. TWTs were a post-WW2
innovation and were already flying in the McDonnell "Quail" decoy
missles in 1958. GE and others were already using inverted
lighthouse 2C39s at 1.8 GHz in 1953 for multichannel radio relay.

>> Funny thing is that if you do get to a reasonable level of code proficiency
>> (as required by the General class and above back when) there was yet another
>> danger: you just might enjoy it :))

The olde-fahrts in ham radio had already decreed that amateurs
had to begin as they did in the 20s and 30s...working to make
sure the rules would make all newcomers do AS THEY HAD TO DO.
"Excellence" in ham radio of the 40s and 50s was radiotelegraphy
on HF...as it is a half century later. [olde-fahrts breed other
olde-fahrts in some strange twist on perverse Darwinism]

Communications carriers were ALREADY ESTABLISHED on HF prior to
WW2, including SSB (but at a wider format of 12 KHz BW for SSB).
The Solar cycle was known as was the ionosphere (courtesy of the
academics, not the amateurs) and all that remained post-WW2 was
to study more intimate details of the ionospheric layers...which
was mapped by commercially-made ionospheric sounders.

Returning veterans were busy at the Legion Halls, telling stories
of radio derring-do "during the WAR" with CW saving the day, etc.
The more alcohol intake, the greater their telegraphic "heroism"
became. Pretty soon they were all "sending intel from behind
enemy lines with CW" until tossed out of the Hall at closing.
That dipshitness kept on with some all the way to 1991, including
one in here whose "son did that in the first Gulf War." BS.

>Yep indeed....it was "up or out". Novice good for 1 year, non renewable
>and can't get it again. Talk about incentive licensing.

INCENTIVE! WORK HARD! SHOW DEDICATION AND COMMITTMENT TO THE
AMATEUR COMMUNITY!!!

For WHAT? A HOBBY? A recreation? A passtime?

Prior to 1956 ANYONE could go to an FCC Field Office and take
a First Class exam for a COMMERCIAL license for WORK. None of
that hoop-jumping of union-enforced "skill levels" and "going
through the ranks" bullshit. For money-paying WORK.

No, the HOBBY rules HAD to be like some union hall or guild or
craftsmanlike apprentice-journeyman-master with CW being the
ultimate "skill." A bunch of olde-fahrt-inspired "rules" of
PRETENSE AT EXPERTISE AS IF THEY WERE "AT WORK." Hobbyists,
making like they were pros. Make-believe.

>A very good friend mine, Ray, K8DEN recently passed away. I am so happy
>he finally was able to get on HF. Thats right as a 5wpm General. He was
>like you said, just could NOT learn the code. Whether physical or mental I
>don't know.

Sorry, that's NOT GOOD ENOUGH. In order to DEDICATION AND
COMMITTMENT TO THE AMATEUR COMMUNITY AND THE "SERVICE" one
MUST show morsemanship of high rates. According to all these
"radio experts" in hamdom, ANYONE CAN LEARN THE CODE!

WORK HARD FOR A HOBBY! Make CW your prime committment in life!

Radiotelegraphy is EVERYTHING in amateur radio!!!

>...then was tough. But it was fun. I had it both ways.

[we aren't interested in your early sex life...]

>It is much easier for the beginning ham now than it was for us Jim. Perhaps
>it is too easy and that is the problem.

AWWWWWWW..... Poor babies...you WORKED SO HARD, ALL THE EFFORT,
SWEAT, STRAIN, STRESS and now nobody respects your mighty
accomplishments of overcoming pre-WW2 standards and practices in
a HOBBY RADIO!!!

I can wear out my ticket punch on all your TS cards, southern-
fried Einstein, but I'll toss 'em right back in your florid face.

Fifty-two years ago I and two other newbies got one afternoon's
"schooling" on QSYing a 1 KW HF transmitter. Do this, do that,
all without having done it before. See MSgt Ouye for manuals on
"how it works." One HF transmitter out of three dozen ranging up
to 15 KW at that time (bigger ones to come). 24/7 operation for
a headquarters command, the Korean War still going. We all
learned that and more, did our thing. No stories, no phony
braggart herioism. This was WORK. Wanna be better? OK, just
grab a TM and study. Nobody gets neat certificates suitable for
framing, no "high scores" in "contests," no "personal callsigns"

to make out like we were "big shots." We just kept the messages going through. 24/7 on HF.

OH! how "tough" you AMATEURS had it! How you must have suffered! Nobody worked as hard for a HOBBY as you mighty morsemen did!

Have you considered Grief Counseling, mighty troubled warrior of the AMATEUR airwaves?

>
>Hey Lennie....did that beating you took with the lye soap leave any
>permanent scars?

No "beating," no "lye soap," no "scars," you southern-fried
dumbass dipshit.

I never ever suffered something that YOU must have gone through.

>I've figured this guy out folks. He was a barracks lawyer that got caught
>up in several barracks parties. A total loser.

"Loser?" In what? I was in Signal, not Judge Advocate Corps.
A long time ago. Radio communications for a major area
command. Began that as an E-2 no-striper, ended it as an E-5
with three up and one down after three years in last assignment.
Half a century ago. Never had to learn/use radiotelegraphy then
or since in a career in electronics design...nor in electronics
AND radio as a hobby activity.

What am I a "loser" IN, southern-fried dumbass dipshit Dan?
I've got an education via formal schooling and self-study, money
in the bank, house(s) long-ago all paid off, a brand-new car in
the garage since Friday (all paid off fully this Monday) and am
happily married to my high school sweetheart.

Oh, yeah...I'm a "loser" because I don't "respect" and "honor" your amateur radio ethos and mythology about morsemanship? I'm a "loser" because I won't sit back and take your FILTHY comments when you act all "tuff" in words? It's absurdly easy to call others all sorts of filthy names like "dipshit," "dumbass," "putz" and other things. Maybe that's it...I'll have to get all "manly" and start calling others names?

I'm a "loser" because I was interested in ALL radio and did NOT get a ham license first as I "was supposed to?" Must be. I "cheated" and got a COMMERCIAL license FIRST and then went to WORK in the aerospace industry. Yeah, a "loser" because I don't worship at the Church of St. Hiram and tell tales down at the Hall about radio heroism in southern Asia, a war that ENDED THIRTY YEARS AGO.

Yeah, I'm a "loser" because I don't kiss your extra ass and give you TLC when you make all your sob stories about "how tough YOU had it" long ago...? Is that it?

Oh yeah, I'm a "loser" because I just want the government to eliminate the code test for a HOBBY radio license...and watch all those PCTA extra "winners" sit here and call the NCTAs lots of filthy names and make up stories about what I "did."

Dipshit Dan, ordinarily I'd tell you to just "go to hell." I don't need to. You've made it there on your own. Enjoy.

>It shows that the word "feldwebel", when it was used in connection with
>a specific person, has Godwin connections.

Oh. I see.

I was wondering, because - well, there are a couple of errors with
your statement .

Let's have a look:

1. "The Fuhrer was a feldwebel in WW1".

Well, no. According to several historical references, our friend
Adolf never achieved a rank higher than the equivalent of Lance
Corporal by the end of WW I. Several translation facilities available
on the Web (see below) translate "Feldwebel" to "Sergeant". This was
a rank senior to his.

2. "It shows that the word "Feldwebel", when it was used in connection
with a specific person, has Godwin connections."

Well, no. Even if Mr. Hitler had indeed held that rank in the German
(Bavarian, actually) Army during WW I, that was before the creation of
the Nazi party in 1920. Bu that time, he had left that rank and
entered politics.

All you would have proven was his rank in the Army during WW I - just
like thousands of other soldiers - none of whom attained the level of
notoriety that Adolf did.

Not exactly Godwin invokable stuff at all!

A few references for you:

FELDWEBEL

>>
>> Oh - I forgot - you said you use another interpretation of that
>> rule.......
>
>The correct one..

Well, no. Part of it - but not all. The intent of Godwin's Law was
to provide an upper limit for the length of a Usenet thread - he
theorized that, eventually, someone would make reference to the Nazis,
and that would be that. End of thread.

I pointed out earlier that you really hadn't achieved anything useful
by invoking Godwin, as the arguement would continue - your
response,was that you had "won the arguement" because Len had referred
to the Nazis.

Mr. Godwin would disagree - if the thread continues, then the
invocation of his law has failed.

You can't use the 'correct' version if you don't use it all! :)

>
>Len can do no wrong by you.

Well, no. That just ain't so Google back a couple of years ago, and
you'll see that Len and I haven't always been at peace..... :)

Len has done no wrong to me - giving me no reason to do any wrong to
him.

Now, if I was to get on the keyboard and tell him that his
professional knowledge and experience isn't worth anything, or that
acquiring a ham license is better than sex, or that a Ham without
Morse is like a day without sunshine - or worse - rag on him every
chance that I get that he is 'wrong' about something.......well, then
Len and I might have a problem getting along here.

Wonder why that would be? Heh heh heh.

>

Oh - I see - it was an opinion poll and not a question. Sorry then -
I thought is was a question! :)

If thaat's true, though - "no answer" is a valid answer - it's right
there on your list. But, you said that I had to have an answer, and
that 'no answer' was not an answer. Waaaah!

I'll pick that one then. No answer.

>
>Should you keep lending him your tools?

Actually, my analogy was right on the money. exactly two variables
(jump / not jump) just like your option regarding the question (answer
/ don't answer). Yours has a few more variables.

In your example, the correct answer (following your logic) is: Borrow
the neighbour's tools, break them and get them dirty, and give some of
them back. After all, like you said, "It's a question of fairness and
equality. Also experience with what is done with the information
provided."

Thanks, Dave. You are correct - my spelling of the word "obsessive"
was incorrect. Appreciate the help!

With regard to your second point, though - 'obsessive' wouldn't refer
to Jim's 'treatment' of Len - it is in the relentless pursuit of
proving the individual wrong that we would find the true definition of
the word.

Thanks anyway, though!

"Loser?" In what? I was in Signal, not Judge Advocate Corps.
A long time ago. Radio communications for a major area
command. Began that as an E-2 no-striper, ended it as an E-5
with three up and one down after three years in last assignment.
Half a century ago.

<Lennie's angry tirade snipped...>

My, my, Lennie. You are obviously, as evidenced by your tantrum, much more
capable of handing out insults than you are at receiving them.
What ever is the matter, Lennie? Did big, mean and nasty old Southern Fried
Dan, as you put it, hit a soft spot on Poor Lennie's overly inflated

cranium?
Three up and one down? An E-5?? In whose Army?

My, my. That big, nasty old Dan sure got you riled!

WAY TO GO, DAN!!!!

Dee Flint wrote:
> All the licensing
> requirements are arbitrary. Every single one of them.

I would use the phrase "only based on FCC's judgement and experience"
rather than "arbitrary", but that's a minor point. Otherwise agree
100%. Not only that, but many if not most of the
rules are only based on FCC's judgement and experience too.

For example, the maximum power an amateur station may use in
the USA is 1500 W peak output. Why 1500 W - why not 1000 W,
or 2000 W, or something else? Why not any power level that an
amateur can put on the air and still meet RF exposure and spurious
emission rules?

> Tthere are several radio services for
> which no testing is required. So if some services do not need > testing, then it is
arbitrary for those that do. However the
> goals and purposes of
> amateur radio make it desireable to test candidates for these
> licenses.

And those goals and purposes are based on FCC's judgement and
experience as well. FCC could, if they wanted, simply define
amateur radio as "hobby radio", but they haven't done so.

> comes to light. No new rational has come up. There's no point > > in rehashing the same
issues.

I disagree!

There's always the possibility that some new idea, argument, or
information will result from a discussion. Even the passage of time
gives new insights.

For example, the 2000 restructuring that reduced both code and
written testing did not result in sustained growth of the number
of US hams. We saw a small rise for a few years, but since April 2003

or so the numbers have been in a slow decline. This data clearly
indicates that the license test requirements aren't the
limiting factor to longterm growth.

> Sooner or later the FCC will rule and we'll all have to
> live with the consequences good or bad.

Yep. But until they do, we can refine and develop our
arguments on both sides.

As for it being unhealthy to discuss, I'd say that as long as
the discussion remains at a civil level, without misquotes and
personal attacks, it's healthy.
>
> If the result is as the NCTA state that it will be, i.e. a big > wave of new

That's one big reason we have subbands-by-mode.

> noticeable impact aren't worth the bother of implementing.

That's true. But there are other factors:

- Reducing the license requirements still further may have negative
effects.

- If there's no real effect, the solution obviously lies elsewhere. But
some may not want to accept that fact.

- Once the requirements are reduced, it may be near-impossible
to get them raised back up.

Hello, John

I passed my amateur extra, 1st phone, and 2nd telegraph in 1966. After letting all my tickets expire, I simply re-tested and passed with no study my amateur extra (20 wpm) in 1993 as well as my GROL (which is considerably simpler than the old 1st phone).

I have worked with a lot of surface mount technology, computers, programming languages, and still know pi to 100 places.

What amazes me is that folks think that if you have an education that is 15 years old or more or possess a license issued more than 15 years ago, then you can't possibly be up-to-date.

Sounds like you've got earlyheimers disease to me :))

With all due regard from Rochester, NY
Jim AA2QA

Jim:

I just took it for granted that everyone experienced life a lot like me. Remember when your were 21? And how back then 50 year old people looked like they had one foot in the grave? How 60 year old people looked as if they were preserved in formaldehyde? And, were just about as interesting to chat with as window drapes?

Now that you are old--suddenly you got blind?

I am 55 and people even 65 are about as interesting as rocks--there is that kind of difference which occurred in the 60's and has been occurring ever since...

Get real--the only reason some old geezer type will have a younger woman on his arm is for the money....

You can extrapolate on that to figure out how it applies here at amateur radio...

If your views weren't so narrow, you might find what those 60 somethings
have to say is interesting. I suppose that when you get to be 60+ you
will of course be absolutely enchanting.

I suppose everyone has something to say...

We are experiencing a time in our history where people are living a lot longer than they ever used to--and in better health.

This is causing a problem in how to get them moved aside so younger and more capable minds can grab the reins. However, those grizzled old hands hands have a death-grip while the buggy heads for the cliff...

>

First off steve, those letters WERE going through my blog and some one
was posting my email on it. the headers even state it. As I stated
before those were fake.

> As for the suggestion that Todd was not responsible for the
> threatening letters, I look at it this way...Even if he didn't send

> irresponsibly.
>
I don't control the people who vist my site, and my view is that ehat
you did was wrong, if you didn't like what I said on here then you
should of complained to googles, because as you know that's who I am
using. what you and your little buddies on here did was restrict my
free speech. Everyone has the right to free speech, but you don't have
the right to be heard, right? however the federal courts had ruled in
the past that it's only is true provided that it doesn't completely
restrict the person conducting the speech. There were three alteratives
that you could of done, the first simply don't look at my post. I know
many people on here that don't look at my comments and simply put you

could of done the same. Second is complain to googles because like I said you know that is the service I am using. and finally complain to the ISP. only after the two has been used up should you and your friends done the complaining on the Internet. My blog is my thought hence, the address n9oglvoice. if you don't like what I have to say there quit coming since I was kicked off you and commander cornhole has visited my site repeatly. As you've stated this is an open forum, and you are not the moderator nor due you own this newsgroup. AS for the email's, emails can be faked, of course a newbie like yourself wouldn't understand it. the first thing that tip me off they were fake was the fact that in the IP there was a question mark, and secondly although it is a "consolidated communication telephone" IP address it was not mine, but, again someone who has no real skill in figuring that out would believe it to be real.

> I asked him repeatedly to stop using my name and callsign on his
> blog, and he just repsonded with more threats and profanities.
>

I have NEVER used you callsign on my blog, anyone can sign in as whatever they want. Nor have I threaten you, as for profanities on here or on my blog like I said above you could of simply ignored it....if you want clean talk I know some religious sites that would love to have you.....you see your forgetting this is the internet, I know sites where they say things ten times worse then what I've said.....if you want a clean communication go back to radio....radio and the internet as I've stated before are two different forms of communication and different sets of rules.

> Also, I am obviously NOT the only person who's been busting Todd's
> chops with his ISP.
>
and it will be funny when they have to answer to the FCC since they are not only an internet service provider but they are also the phone company who controls the broadband in this town.

> He played with fire...He got burnt...Oh well...

Other references refer to him as "feldwebel" as in "feldwebel
schikelgruber. However, it appears that, in fact, he never actually
held that rank.

So it comes down to whether the original writer of the sentence "shut
the hell up, you little USMC feldwebel" knew those facts or not.

Not at all. Some people are still addressed by their rank long after
their
military service is done, such as "Captain" Peacock and "General"
Sarnoff.

You don't need to do all that. I haven't done any of it.

All you have to do is disagree with him about the Morse Code test,
defend
that opinion, and then point out an incosistency or two in his
postings.
>
> Wonder why that would be? Heh heh heh.

I read all of it. Do you read the responses I get from Len?

> Jeez, I'll bet you dream about the guy!

Nope.

> >> Heh. "Those who ain't with me are agin' me....!"
> >> - what movie was that from again???
> >
> >Not a movie - a good description of Len's newsgroup behaviour,
> >though!
>
> A pretty accurate description of your behaviour too, sadly enough.

That claim is incorrect. Unlike Len, I have many civil, uninsulting
discussions here with those who disagree with me on a variety of

issues,
including the Morse Code test. Google up any exchange between N2EY and
K2UNK,
for example.

The number of variables is irrelevant in this case.

> In your example, the correct answer (following your logic) is: Borrow
> the neighbour's tools, break them and get them dirty, and give some of
> them back.

Nope.

The question was whether to keep lending him your tools (yes/no).

Note that it was already stated that the neighbour won't lend you any
of his, so your solution is not feasible.

You didn't fully understand the analogy.

> After all, like you said, "It's a question of fairness and
> equality. Also experience with what is done with the information
> provided."
Note that it was already stated that the neighbour won't lend you any
of his, so your solution is not feasible.

Aha! Gotcha!

You forgot to mention the changes in elevation over changes in
distance!!!

3360. Re: Robeson gets Todd kicked from his ISP based on Todd's irrational behaviour

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-21 10:16:04 UTC
From: K4YZ <k4yz@aol.com>
Message-ID: <1119348964.691868.115100@o13g2000cwo.googlegroups.com>
Source record: 110693

QUOTE:

First off steve, those letters WERE going through my blog and some one was posting my email on it. the headers even state it. As I stated before those were fake.

UNQUOTE

And like >>I<< told >>YOU<< those "letters" were allowed to happen because YOU wouldn't exercise some control over your blog. "Freedom of speech", you kept harping.

Whelp, Todd, there are RESPONSIBILITIES that come with our freedoms, and making sure that others don't take advantage of them is one of them.

QUOTE

I don't control the people who vist my site, and my view is that ehat you did was wrong, if you didn't like what I said on here then you should of complained to googles, because as you know that's who I am using.

UNQUOTE

Oh, but I >>DID<< talk to Google, Todd...THEIR response was that it was YOUR resposibility as "site owner" to do smething about it...Just like I told you it was.

QUOTE

what you and your little buddies on here did was restrict my free speech.

UNQUOTE

No...what I did was exercise MY rights to file a complaint.

EVERY TIME you posted a new post calling me a MF or AH or other such profane adjective, I had the legal RIGHT to file a complaint, and that's exactly what I did.

You got to have your "say", and it was all obscene and offensive. I had MY say and it was "I'm not going to take this".

What happened "happened" because I was right and had "my ducks in a row".

QUOTE

Everyone has the right to free speech, but you don't have
the right to be heard, right?

UNQUOTE

You have every right to be heard...You do NOT have the right to
publically insult, demean or otherwise overtly offend people after they
tell you that they are offended by your behaviour.

QUOTE

however the federal courts had ruled in
the past that it's only is true provided that it doesn't completely
restrict the person conducting the speech. There were three alteratives

that you could of done, the first simply don't look at my post.

UNQUOTE

Not looking at your post in a public forum is like trying to avoid the
smell of a dead skunk, Todd...It's right there in front of you.

QUOTE

Second is complain to googles because like I
said you know that is the service I am using.

UNQUOTE

Did it. They said you were responsibile.

QUOTE

and finally complain to
the ISP. only after the two has been used up should you and your
friends done the complaining on the Internet.

UNQUOTE

Did that too. I told you I would. You persisted in your behaviour.
Your ISP even told you to stop but you persisted. You were told "six
ways to Sunday" that something would happen but you ignored me.

Bad idea.

QUOTE

My blog is my thought
hence, the address n9oglvoice. if you don't like what I have to say
there quit coming since I was kicked off you and commander cornhole has

visited my site repeatly.

UNQUOTE

Your last post was May 27th, Todd...I didn't post anything there until your comments day before yesterday.

QUOTE

As you've stated this is an open forum, and
you are not the moderator nor due you own this newsgroup. AS for the email's, emails can be faked, of course a newbie like yourself wouldn't

understand it.

UNQUOTE

Sure they can be faked. And they were being "faked" via YOUR site. I asked you to control it, you said no. The results were "predictable".

And I'm not a "newbie", Todd...That's why I was able to push the right buttons and get the desired results.

QUOTE

the first thing that tip me off they were fake was the
fact that in the IP there was a question mark, and secondly although it

is a "consolidated communication telephone" IP address it was not mine,

but, again someone who has no real skill in figuring that out would believe it to be real.

UNQUOTE

Then here's the step YOU should have taken since you seem to be in a mood to tell folks the steps to take:

(1) You should have IMMEDIATELY gone to your blog and compared IP's and canned the author.

(2) You should have IMMEDIATELY called YOUR ISP and notified them

(3) You should have IMMEDIATELY posted, both on your blog and RRAP, those IP's along with yours to show the true origins of the letters.

Instead you let it happen...To me, letting something deceitful happen when you have the means to stop it is as if YOU were the originator.

QUOTE:

> I asked him repeatedly to stop using my name and callsign on his
> blog, and he just repsonded with more threats and profanities.

I have NEVER used you callsign on my blog, anyone can sign in as whatever they want. Nor have I threaten you, as for profanities on here

or on my blog like I said above you could of simply ignored it....if you want clean talk I know some religious sites that would love to have

you.....

UNQUOTE

First of all, you've already removed a bunch of posts when you
re-worked your site. Yes, You did use my callsign...Repeatedly.

And secondly, one does not have to use profantities in every third word
to effectlively express themselves.

See what all the profanity got YOU?

I didn't use a bit of it.

So how do you explain THAT...?!?!

QUOTE

you see your forgetting this is the internet, I know sites
where they say things ten times worse then what I've said.....if you
want a clean communication go back to radio....radio and the internet
as I've stated before are two different forms of communication and
different sets of rules.

UNQUOTE

Well, Todd...I don't go to those "other sites" for those very
reasons...I don't care to be associated with people like that.

Secondly, had YOU not introduced all of that foulness to RRAP, I
wouldn't have been complaining about THAT...I wouldn't have known about
this "blog" had YOU not brought it to the attention of RRAP, either.

QUOTE:

> Also, I am obviously NOT the only person who's been busting Todd's
> chops with his ISP.

and it will be funny when they have to answer to the FCC since they are

not only an internet service provider but they are also the phone
company who controls the broadband in this town.

UNQUOTE

BBWWWHHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
! ! ! !

Todd, I spent an hour on the phone with an aide in the office of a
certain Midwestern Congressional representitive, and it was
enlightening.

I gave them YOUR blog, your e-mail address, and the links to RRAP.

They're on to you!

QUOTE

> He played with fire...He got burnt...Oh well...

there is an old saying steve, what goes around comes around.....your day will come.

UNQUOTE

Yes, it will, Todd, just as will your's...but mine won't come at the hands of a foulmouthed impotent toad who thinks adulthood is about screaming profanities and threatening "I'LL SUE! I'LL SUE!" at every opporutnity.

QUOTE

THE N9OGL SHOW
14.321.00 MHz

UNQUOTE

There are no "shows" on Amateur Radio, Todd...that's broadcasting.

Steve, K4YZ

Well, Todd...You've only posted one item on RRAP since May and
already it's begun.

However, here's the benefit of the doubt: Here's a copy of the
e-mail I got along with headers. I am e-mailing it to you also.

Now you can take it to your ISP and let THEM deal with it.

Steve, K4YZ

Does it matter?

I don't remember the FCC making a point of sunspot numbers in
licensing requirements other than discussing propagation
characteristics.

Good advice, Brian.

Are you going to take it, or are you about to take us on yet
another "...'they' chased all the Techs away.." story..?!?!

You, as usual, missed the point, Brian.

Many of the "dx" operators do NOT have the means by which to
obtain megabucks multimode/digital Amateur facilities.

> Jim is right. Civil discourse leads to new insights on arbitrarines
> and prejudices.

Where did he say that, Brian...?!?!

A quote, please, or is this yet another "I said it but I really
didn't say it" dance?

The "requirements" (ie required knowledge) for an Amateur license
are as steep as they've ever been...But when there's no real incentive
to LEARN the material, of what use is it...?!?!

John, you are showing signs of being an ageist.

A person's ability to do a job is not specifically related to their age. That is an old paradigm.

In fact, in the technical fields, there is a dramatic lack of young Americans.

So if the geezers have that "death grip" on the reins removed, there likely won't be anyone to take it up.

Michael:

So, your logic goes something like this, "That problem exists in other places too--we have nothing to worry about."

I find that similar to, "Well, the neighbors paper wasn't delivered--same as ours. And, their toilet is plugged up--just like ours, nothing to worry about."

And, that is EXACTLY a very-good example of why I say younger minds need to be called to play here--with more energy and willing to face up to truths and take on these problems.

I disagree!

I am simply persistent. I offer strong opposition to some of
the errors of fact and reasoning presented here by Len and others.

Len gets all upset by that, and attacks the messenger (me).

Is it unacceptable behaviour for me to be persistent about getting some
things right (such as whether or not Novices and Advanceds can
renew and modify their licenses without retesting)?

I can't control someone else's posting of information and reasoning
that is in error. But I can refute it with facts and clear logic,
and resources permit I do just that. Hardly obsessive, IMHO.

You were quite persistent in coming up with proof that I was
mistaken about the use of the word "feldwebel". It's clear that
the person to whom that rank was attributed never held it. Was
that "obsessive" on your part? I don't think so, just persistence
in getting something right.

"Younger" doesn't necessarily mean an improvement. Then you need to
define "more capable". You need to explain why younger and older can't
co-exist.

> However, those grizzled old
> hands hands have a death-grip while the buggy heads for the cliff...

Your agenda is given away when you use terms like "grizzled old" (maybe
you meant "grizzled, old") and "death-grip".

Finally, you'll have to establish as fact that there is a buggy and that
it is heading for a cliff.

Not a valid assumption, John.

> Remember when your were 21?

Yep. I remember all the way back to when I was 3 years old.

> And how back then 50 year old people looked
> like they had one foot in the grave? How 60 year old people looked as
> if they were preserved in formaldehyde? And, were just about as
> interesting to chat with as window drapes?

I don't remember older people that way at all, from when I was 21. Or
any other age.

Sure, when I was 21, someone who was 51 looked "old". That's natural -
someone who is 21 looks very young to me now.

But they did not look like they "had one foot in the grave", nor "were
preserved in formaldehyde". Just older.

A few were uninteresting old grumps. Others were *very* interesting to
chat with, talk to, learn from, spend time with.

When I was attending the University of Pennsylvania in the early-mid
1970s, there was one professor who was absolutely adored by all of us
EE students. He was Professor Cornelius Weygandt, who taught a number
of courses like Electrodynamics and Power Systems. He was at least 70
at the time and looked ancient to us.

But he had an energy that, for lack of a better word, was pure
electricity. He'd walk into class with a half-sheet of paper on which
was written a complex problem. He'd draw the problem on the board and
then proceed to show us how to solve it. No notes, no books, no
calculators, no slide rule, just his own knowledge. His explanations
were clear and precise, making complex concepts clear and
understandable to all. We would toss variations on the problems at him,
and he'd solve the variations too, with no preparation at all.

One time in Power Systems he gave us a homework problem from the book.
Looked simple but the answer made no sense no matter how we solved it.
The book had a misprint, and the numbers given could not exist in
reality. Of course the *real* lesson was to check your data. When some
students protested, he asked "Do you mean you trust everything that's

written in books without question? Next thing you'll tell me is that
you trust everything that comes out of a computer!"

Lesson learned.

Sometimes (outside of class) we could get him to tell stories of when
he was our age (he'd graduated from the same school in 1921) or his
work on the Differential Analyzer. Great stuff.

He's just one example - I have many more.
>
> Now that you are old--suddenly you got blind?

No. But there are none so blind as those who will not see.

> I am 55 and people even 65 are about as interesting as rocks

to *you*, maybe. Not to me.

>--there is
> that kind of difference which occurred in the 60's and has been
> occurring ever since...

Consider that the problem may be *your* perception and interaction with
them. I know plenty of interesting people in their '60s, '70s, '80s,
even some in their '90s. Plus plenty of interesting younger people.
Their different perspectives are illuminating - all of them.

And if people are living longer, and staying healthy longer, then
there's no reason for them to step aside just because they're old. Ever
hear the phrase "60 is the new 40" or some such?

> Get real--the only reason some old geezer type will have a younger woman
> on his arm is for the money....

There's a lot more reasons than money. Sometimes a younger woman wants
a daddy figure. Sometimes she wants someone who's more experienced,
mature and stable. And yes, sometimes it's the money.

There are also men who prefer older women, for similar reasons.

I suggest you rent the film "Harold and Maude". (no, it's not
about Ashton Kutcher and Demi Moore).

> You can extrapolate on that to figure out how it applies here at amateur
> radio...

>From what I see, all ages have something to contribute - if they want
to.
And if those of other ages are willing to listen.

Take a look at the comments to the various restructuring proposals -
both the 18 current ones and the 1998 one that led to the changes of
2000. There
were fewer than 2500 comments in 1998. I'm not sure of the number of

comments to the 18 current proposals (they're all long past their comment periods) but in total there are only a few thousand. And support for continued Morse Code testing is in the majority!

All those people who supposedly don't accept the Morse Code test - yet they cannot even bother to comment to FCC.

Say - if you really believe older folks should step aside, maybe *you* should step aside for a younger guy like me!

I passed the Extra in 1970 - at age 16. Graduated with BSEE in 1976 and MSEE in 1992.

But my education isn't 15 years old, because it's an ongoing thing.

Dave:

Ohhh, younger is much better, means you will still have hams left when the old ones are SK (i.e., not still moving about above ground.)

... also, it will bring a breath of fresh air to the hobby--anyone on the bands know we suffer an overload of people older than 40 and need some new blood...

Dave:

It is quite obvious, anyone who does not agree with you is a
troll--well, in you interpretation of the word...

I stand behind those words you have fault with. I think they are right
on and the truth. I know some think that simply denying them for a
sufficient length of time will cause them to go away...

... all we have to do now is watch declining numbers, take tally on the
oldsters about and lack of youngsters and the truth is quite obvious.

Really, no argument is needed. What the future looks like has already
been stated. Now the proof which is hidden in the pudding only needs to
be given a sufficient length of time to come out.

As long as we are watching and able to argue for changes to improve and
save the hobby, I have faith in the younger people coming along--they
will eventually make the right decisions when they come into power...

N2EY:

Well, it is quite obvious it is NOT as it was when I was younger--you are correct--back then there were real men/women who knew how to interact with youngsters and improve the hobby--and give a welcome and "hand-up" to the newbie's.

Now, today, you see an example of the problem right here. The older generation has not learned how to gain the caliber, stature and wisdom of those who gave them a hand up. This new bunch is a "good ole boys" club with a closed door policy. They are a self-serving bunch of self-centered "small men/women." Long as they can rag chew and rant their personal issues, likes, wants, etc they will go to their doom--it is just up to thinking minds to make sure they don't carry the hobby to doom with them...

They lack sorely when gauged against the those of yesteryear... hopefully those who will now take the reins will learn from these lessons and be able to correct this blight which has descended on this once great hobby...

Hey Doofus:

The same problems exist which existed a year ago--NO PROGRESS! Get a clue...

That is as accurate today as the day it was written--that IS my point--some here are stuck in the twilight zone--no improvements...

Quotes even!

I don't recall saying "we have nothing to worry about"

We do, and ham radio is waay down on the list of problems that occur due to the lack of US citizens going for technical careers. And it isn't going to be fixed by Ham radio.

Aha! John, you have an age thing going on here. When I was a young 'un I did indeed notice that my elders looked different than me. They looked bigger than me too. But other than that, it was no big deal. And they definitely were not uninteresting. My Grandfather got me started in electronics, giving me old car radios, power supplies, and showing me how to fix them. Great memories, that. Not a trace of the dreary picture you paint of older people.

A bad path to go on, John. Lord willing and the crick don't rise, you will be ancient some day. I hear despite the drawbacks, it sure beats the alternative.

That isn't how quotes work. I don't quote myself, save when I look up
something I wrote or said earlier.

> I am asking a question, and giving what I hear as the interpretation of

No need for interpretation needed, as far as I can see.

What personal attack, John Smith?

If you interpret my responses as a personal attack, then what on earth
are *your* missives?

But if that is how ya are, okay. I can quite botherin' ya.

Hello, Mike

There is a dearth of young folks in technical fields as the religious right has no (perceived) need for them.

Our engineering is now done in India and manufacturing in China. I've had two small appliances now that failed in 6 months or less. The "warrantee" is you send them the bad unit and they give you a replacement - and half price. So, they simply sold another unit.

Meanwhile, I note we are quite a bit down the line in life expectancy. We have a much higher incidence of infant death than many others.

I'm tired of hearing how great we are. We are leaving a rather poor legacy to the young folks.

That'd be "In what am I a loser?", Leonard. Let's start with use of the English language, Mister PROFESSIONAL writer.

> ...southern-fried dumbass dipshit Dan?

You seem to be losing it at about this point, Len.

> I've got an education via formal schooling and self-study, money
> in the bank, house(s) long-ago all paid off, a brand-new car in
> the garage since Friday (all paid off fully this Monday) and am
> happily married to my high school sweetheart.

That's all very nice and I'm sure that we're all very happy for you. Nobody else here has ever gotten an education, purchased a home or car or has been happily married. Yessir, you've really trumped us.

> Oh, yeah...I'm a "loser" because I don't "respect" and "honor"
> your amateur radio ethos and mythology about morsemanship?

It really matters not whether you respect and honor anything in amateur radio, Leonard. You aren't involved in amateur radio at all. If you choose to vent yourself as you do in this newsgroup, you become fair game. Deal with it.

> I'm a
> "loser" because I won't sit back and take your FILTHY comments
> when you act all "tuff" in words?

FILTHY comments?

It's absurdly easy to call
> others all sorts of filthy names like "dipshit," "dumbass,"
> "putz" and other things. Maybe that's it...I'll have to get
> all "manly" and start calling others names?

"I don't work for scale, Mikey. Wait til you get BILL!"

"league-published grain of the olde-tyme hammes..."

"March, march, beep, beep..."

"Tsk, since Jimmie became "tollmaster" in here..."

"Olde-fahrt morsemen ought to be very happy."

"Davie gonna chime in with..."

"Jimmie and Stebie and Davie all try to manufacture..."

"Jimmie be judge of ALL"

"Coslo reach "edge of space" yet?"

"Above all, let's all do our best to ENTERTAIN MIKEY!"

"Screum say I (in a most non-gender-specific way, of course)."

"Jimmie thinks he be barrister in the Queen's Bench. His wig is on crooked."

"Jimmie try to be cross between Miss Manners and Sister Nun of the Above."

"ARS (aka Archaic Radiotelegraphy Society) is in full flower in here..."

--recent quotes from Leonard H. Anderson

You're going to start calling others names, Len? Now, there's a frightening prospect!

> I'm a "loser" because I was interested in ALL radio and did NOT
> get a ham license first as I "was supposed to?" Must be.

Interested in ALL radio? You declared a decades-long interest in *amateur radio* and you have yet to act upon that interest, much less live up to your "Extra right out of the box" boast. I'd say that qualifies you as a loser.

> I "cheated" and got a COMMERCIAL license FIRST and then went to
> WORK in the aerospace industry.

Again, that's all very nice but it has naught to do with amateur radio. I know a guy who went to dental school and who has his very own dental practice. He's been a ham for nearly fifty years.

I know another fellow who attended law school and who makes a handsome living through the practice of law. He's been a ham radio op for about fifty-five years.

> Yeah, a "loser" because I don't
> worship at the Church of St. Hiram...

I'm not familiar with that place of worship, Leonard. Where is it?

> ...and tell tales down at the
> Hall about radio heroism in southern Asia, a war that ENDED
> THIRTY YEARS AGO.

No, you must not be eligible for hall membership. You've regaled us countless times with tales of a war which took place over fifty years ago, while you were snug, far, far to the rear--in Japan.

> Yeah, I'm a "loser" because I don't kiss your extra ass...

Don't feel too badly, Len. You may kiss my Extra ass any time you'd like.

> ...and
> give you TLC when you make all your sob stories about "how
> tough YOU had it" long ago...? Is that it?

No, I don't think that's it. There are a number of areas where you'd be considered a loser but it wouldn't be this one.

> Oh yeah, I'm a "loser" because I just want the government to
> eliminate the code test for a HOBBY radio license...

Which hobby license would that be? Would it be one in which you have some stake?

> and watch
> all those PCTA extra "winners" sit here and call the NCTAs lots
> of filthy names and make up stories about what I "did."

Filthy names?

Nobody makes up more storied about what you did than you do. It has been continuous, non-stop self-aggrandizement at its best.

> Dipshit Dan, ordinarily I'd tell you to just "go to hell."
> I don't need to. You've made it there on your own. Enjoy.

That's right. Dan has arrived at r.r.a.p. -- the hell of usenet, self-declared home of that little devil, Leonard H. Anderson. He's mad as hell and he's not going to take it anymore.

Hello, John

Even worse is an old guy hanging out with kids. Did you see where that guy is suspected of many 10s of thousands of cases of abuse?

Nah, gimme a few acres in the Northwest with a lake or stream nearby and a fishing pole.

I fear that this country has expanded beyond its' capability of supporting its' own population (or, rather, will shortly). We consume 1/4 of the world's oil output whilst the administration continues tax breaks for SUVs over 3 tons. To heck with the cost of gas; cut welfare, Medicare, Medicaid, education, social security, the VA ....

Just make sure the very wealthy continue to pay *less* percentage than folks making 80 to 100 grand per year.

I'd give it a few more years before many morons will understand what has been happening. Then there will be a revolution at the polls.

Unfortunately, if another party wins by too high a margin, they may also feel they can play loose and free (as the Republicans currently are doing).

What we need are some moderates. Very hard to find.

Hello, John

Certainly there are a few curmudgeons, but the hams I know well have been always willing to help youngsters.

I think the biggest problem we've had is this code/no code argument that never seems to die.

Myself, I wouldn't mind a retest for everyone rather than a free pass every 10 years. That might be an interesting "equalizer".

Mike:

Let me break this to you gently, what you have to say is just not important in the whole scheme of things--a year from now we will see what we all feel as whole--after debate and argument...

I didn't come here for you to teach me english--rant on if you must--just know it is ignored...

No, there is little need for interpretation of what you say, it is obvious:
1) there is no problem
2) even if a problem exists--no reason to worry
3) we need not do anything
4) I (Mike, meaning YOU) am happy, everyone else shut up and go away
5) status quo is all which matters
6) etc, etc, etc

I don't make personal attacks--however, if the truth offends someone, so be it...

Mike:

I say to you, "This is a proper quote."
I have said in the past, "This is a proper quote."
I will say in the future, "This is a proper quote."

If you would ask me about the weather, I would say, "It is hot."

I think, "You are a self-centered person who cannot see further than you
ancient nose."

I believe your philosophy is, "To hell with the younger people... all
they are good for is to morse with me and keep my old butt company."

I say the world if for the living and we all will soon be dead, I think
I hear you saying, "I am all which matters."

>
>Other references refer to him as "feldwebel" as in "feldwebel
>schikelgruber. However, it appears that, in fact, he never actually
>held that rank.

Well, no. That would be a reference to another person entirely.
Although "Schicklgruber" was Adolf's mother's maiden name, it was
never given to him. He went by his father's now-famous last name for
his entire time on this Earth.

Same references should yield this information.

>
>So it comes down to whether the original writer of the sentence "shut
>the hell up, you little USMC feldwebel" knew those facts or not.

That was not a part of our discussion - as such, it is irrelevant in
this context.

>>
>> 2. "It shows that the word "Feldwebel", when it was used in connection
>> with a specific person, has Godwin connections."
>>
>> Well, no. Even if Mr. Hitler had indeed held that rank in the German

>military service is done, such as "Captain" Peacock and "General"
>Sarnoff.

Well, no.

Although that is certainly true in many instances, I am unaware of any
historical references which refer to Mr. Hitler continuing to use the
prefix "Corporal" (in German, of course) at any time following his
departure from the Army. I would suggest that is indeed quite
unkilely as it is a very low rank - and I would expect that anyone
addressing the man in that fashion would have had some serious
explaining to do.....

>

>Not "to" you - "by" you. Different thing entirely.

Not at all. I personally deal with those who do wrong 'to' me. Doing wrong 'by' me is subjective - not my problem unless it impacts me directly.

In society, we have police who deal with issues where people do wrong 'by' others. in here, apparently, we have you!

>
>>- giving me no reason to do any wrong to

>
>You don't need to do all that. I haven't done any of it.

I suggest that you may want to rethink that statement - you have been telling Len (and others) that they have been "wrong", Incorrect, "in error", etc. for at least the last eight years, with almost weekly frequency (at minimum).

A few Google examples:

Subject: Keep the quality, lose the spectrum Jul 17 1998
"Len, you are just plain wrong here. You just don't understand the issue."

Subject: Who Is What? Feb 9 2001
"No, Len, it is not correct. Let's look at what you wrote:"

Subject: ARS License Numbers Mar 4 2003
"So you are incorrect again, Len. Mistaken. Just plain wrong."

Subject: Wrong Again, Len! (Communicator Power) Mar 18 2004
(Hmmm - that was your thread - quote not required for that one at all!

You don't think that eight years of "you're wrong, you're wrong..." wouldn't be deemed by a reasonable man to be a bit excessive?

LOL!

>
>All you have to do is disagree with him about the Morse Code test,
>defend

>that opinion, and then point out an incosistency or two in his
>postings.

An inconsistency or two? For eight years?
Do you actually believe that, after all of this time, that you are
going to change anything by whining on?

Jeez, you'd make somebody a great ex-wife.... :)

>>
>> Wonder why that would be? Heh heh heh.
>
>> >> I simply refuse to

>for example.

Agreed. So why bother ragging on for eight solid years about issues
that the folks you are arguing with will never agree?

Jeez. Even Ghandi would have taken up golf by now. :)

>
>I disagree!

There you go - you've finally got it! You've been disagreeing to no avail for eight years here, on and on and on - that's the problem!

Just 11 more steps to go!

>
>I am simply persistent.

Or persistently simple. Time will tell! :)

>I offer strong opposition to some of
>the errors of fact and reasoning presented here by Len and others.
>

Oh, that's nice. How's that working out for you? Changed anybody's mind lately?

>Len gets all upset by that, and attacks the messenger (me).

You don't really believe that, do you? You're not the entertainer - you're the entertainment! He pokes and prods, and you sing and dance - been that way for 8 long years now.

>
>Is it unacceptable behaviour for me to be persistent about getting some
>things right (such as whether or not Novices and Advanceds can
>renew and modify their licenses without retesting)?

I submit that those who need to know the correct answer to those types of questions probably already do - if they are actually interested in the answer, then they would listen. The rest might just be pushing your buttons.....for fun.....y'think?

Let me guess - you opted out of Psych 101 at good ol' Dreidel U too, didn't you? :)

>
>I can't control someone else's posting of information and reasoning
>that is in error. But I can refute it with facts and clear logic,
>and resources permit I do just that. Hardly obsessive, IMHO.

You can only control your own postings. You may also refute and argue points. That is not obsesssive.

To do so fruitlessly for eight years, on a nearly weekly basis, is very likely just - weeeelll - a tad obsessive.....! LOL!

>
>You were quite persistent in coming up with proof that I was
>mistaken about the use of the word "feldwebel". It's clear that
>the person to whom that rank was attributed never held it. Was
>that "obsessive" on your part? I don't think so, just persistence
>in getting something right.

In a way, yes.

I asked you several times if being correct was important to you.

You replied that it was.

I asked if being correct was very important to you.

You replied that it was.

I confirmed this again, and you agreed that it was very important to you.

So, I spent about 20 minutes on Google and provided you with the correct info and a few references for you to read.

That's what you said that you wanted - and that's what I provided.

Obsessive? No. Persistent? Not really - it wasn't a lot of work - and I knew the correct answers before Googling the references - so I wouldn't say persistent exactly.

However - If I kept doing it every week or so for eight years, with no success, over and over again - yup, that might be a problem - I'd be wondering if some parts fell off the ol' brainpan on a curve a ways back there or something.....

>
>
>73 (to all hams) de Jim, N2EY

73, Leo (is it just me, or is there a diss aimed at me again in ol' Jim's sig above? heh heh)

"Familiarity with VHF" wasn't needed. ALL that counted was getting
the morse code speed UP...that yielded absolute knowledge of all
theory thus guaranteeing rank-status-privilege.

I designed and built an external VFO for a few Sixers. Worked fine.
One of the recipients was showing an olde-fahrt extra how it
operated and olde-fahrt said "Nice, did you build it?" "No," said
my friend and, pointing to me, "He did." "THAT'S ILLEGAL!" shouted
the olde-fahrt. Heh heh heh...the same anal attitudes existed four
decades ago as they do now.

Heh heh heh. In northern Illinois the elevation changes amount to +/- a yard. Not even close to bragging rights... :-)

However, to kill time waiting for the return train, I saw a matinee of "Oklahoma." Sat in the balcony, undisturbed. That was good for a change of a couple stories in height! :-)

Too bad it was a sunny day in Chicago. No snow to brag to anyone ("uphill both ways through"). Passed no problem, even with the interruption of a fire drill in the Federal Building halfway through the test.

[a lot of the anony-mousies won't know what we're talking about on this subject...they weren't here to see some of the astounding bragging going on by the late Dick Carroll and others in here]

>
>Well there you have it.

Right. The FCC has all the "judgement and EXPERIENCE" even
though not a single staffer or Commissioner is required to
have an amateur radio license!

But here's an interesting point. If the FCC rules in favor
of something about morse code, Jimmie will say it was due to
the league or other amateur's comments...no credit is given
to the FCC. If the FCC rules against morse code in any form,
then it is the FCC's "fault" and they are to "blame." :-)

>> For example, the maximum power an amateur station may use in
>> the USA is 1500 W peak output. Why 1500 W - why not 1000 W,

>> experience as well. FCC could, if they wanted, simply define
>> amateur radio as "hobby radio", but they haven't done so.

There we have it. Amateur radio is a HOBBY activity...but it
isn't a hobby activity. :-)

There's no such thing as "ham" radio in Part 97 but hams like
to use that term almost to a man.

Gotta love some of this "reasoning." :-)

>> There's always the possibility that some new idea, argument, or
>> information will result from a discussion. Even the passage of time
>> gives new insights.
>
>Ther's not if you continually avoid such discussions.

Avoidance and misdirection are a standard ploy of the
PCTA extras. They seem to figure that stalling for time
will be to their advantage. Like WRC-03 and the rewrite
of S25 endorsed and promulgated by the IARU and opposed
to by the ARRL. With more stalling of time and some
adroit spin by the league the league will say that they
no longer oppose that international change. :-)

>> For example, the 2000 restructuring that reduced both code and
>> written testing did not result in sustained growth of the number
>> of US hams. We saw a small rise for a few years, but since April 2003
>> or so the numbers have been in a slow decline. This data clearly
>> indicates that the license test requirements aren't the
>> limiting factor to longterm growth.
>
>Were the sunspots in decline during this period?

Jimmie seems to suffer "sunspots" of thinking. He gets
his neurons ionized by all of us free radicals...! :-)

The NUMBERS are unmistakable. Without the creation of the
no-code-test Technician class in 1991, the total number of
amateur radio licenses would have continued to DECLINE,
"restructuring" or not. The number of Technician class
licenses have kept on growing until no-code-test Techs are
now 40+% of all U.S. amateur licensees!

If there is a "slight decline" in ham numbers (there is),
but the no-code-test Tech is markedly INCREASING (it is),
then, arithmetically, the total of other classes are
DECLINING (they are).

Jimmie will probably, as he has in the past, go into some
creative rationalizing of DENIAL on that, say "I'm wrong!"
and the usual spin (trying to disguise the denial). :-)
[that's very predictable] I'm not a part of either growth
or decline, just observing the numbers as they change...and
he will say I am "wrong," "mistaken," or other equivalent
phrases. Jimmie will look around at his immediate "ham
neighborhood" and see little change...he gets his ham

magazines regularly, hears the beep-beeping every time he
turns on his ham receiver...and sees "no change," his little
ham world is still intact, no problem.

Regretably for the hobby, the ARRL is only RECENTLY starting
to realize all those NUMBERS! They aren't attracting the
(now) 40% of all licensees as they once expected they would.
ARRL membership has declined.

Olde-fahrt morsemen hams don't much seem to give a shit.
[Hans Brakob seems a rare exception] They strut around,
posturing and preening, babbling about "good old days"
and emptying their mental chamber pots on the "lesser
classes."

>> > Sooner or later the FCC will rule and we'll all have to
>> > live with the consequences good or bad.
>>
>> Yep. But until they do, we can refine and develop our
>> arguments on both sides.
>
>Showing disdain for Technicians who cannot or choose not to learn The
>Code certainly tells a lot.

It tells a very BAD tale. But, they >>ARE<< the self-righteous,
self-promoted "superiors" who seem to feel they "control" it
all and have some "qualifications" for disdaining those
"lesser" folk. But, they cannot be convinced they are
hurting the hobby. They RULE it in their minds.

>> As for it being unhealthy to discuss, I'd say that as long as
>> the discussion remains at a civil level, without misquotes and
>> personal attacks, it's healthy.

Point well made. I was really concerned with some that cause many problems
for a lot of folks.

My elmer, back in 1961, was Russ, W2ZS. He was in his mid 60s then and
passed away in the mid 70s. Heck of a great guy.

Certainly there are good folks, young and old.

Some of the things that have happened of late will likely keep some of the
older folks from trying to get involved, as well as keeping some of the
youngsters away in fear as well.

I'm not always that careless with my comments; I have had my rabies shots
:))

Interesting topic drift, but yes you are correct. It is of great
interest that the righteous religious have a love/hate relationship with
technology. While they are very happy to use the technology that exists
to subdue the "enemy", they are most uncomfortable with any new
technology. The problem is that the mindset of those who would pursue

new technology is in general anathema to them.

However looking in the wrong places for solutions won't solve the problem
either.

You want to repeat solutions that haven't worked.

You ignore the concept that the average age of our entire population is
rising.

You ignore the idea that radio will only appeal to certain types of people.

You ignore the fact that many people simply don't know about ham radio.

You ignore the fact that all hobby activities are having trouble getting new
members because now everyone is split over more activities than ever before
and that it's not unique to ham radio.

You think one "magic bullet" (eliminating the code test) will fix the
problem.

Changing the testing requirements are highly unlikely to cause a significant
impact because they do not address the main issues.

If I had a buck for all the mistakes the fellows with "... time for new ideas and motivated minds with energy" made and that I had to straighten out, I'd be rich. Every activity needs a BLEND OF OLD, NEW, and IN-BETWEEN to get the best results.

Didn't' you know, Hans - there are a brand new set of laws of physics
now - and the big thing is that they can only be understood by those
under 25.....

Yep, more attacks, no solutions offered... but then, that is quite
natural for here... now back to:

1) analyze the problem to death.
2) claim there is nothing wrong
3) claim even if there is something wrong, nothing will work to fix it.
4) pretend no one notices what is really going on
5) go back to the few old guys on the net and rant with them.
6) pretend that we will live forever
7) argue one new license a year is enough
8) don't ask the people who are NOT hams why they don't get a license
9) if they tell us why--deny that it is a valid reason
10) carry on as if it is still yesterday.
11) etc, etc, etc...

... yawn...

First of all John I see little humor in this discussion bringing into the mix those poor souls with Alzheimer's syndrome ..... It is like the idiot who posts here with references to colostomy bags ..... I sincerely hope that either of you never have to go through that in your lives.

I am still awaiting John for specifics on what you have done to foster an appreciation in younger people for the service.
General bitching about the way things are won't cut it ...that my friend is too easy and is the tact of a pontificating twit. Yesterday was a day I will always remember at our club meeting. Matt, a teen with a LD passed his no code. He studied his backside off for the test ....took it 3 times before. I have more respect for that young fellow than incessant moaners I see on this list and in other places.

Looks like you are the one that just dosen't get it johnnyboy. The older generation isn't just a bunch of usless people taking up space here on this earth as you seem to think. It seems you are the self-serving one, you don't want to be bothered by anyone older than you, you seem to think you have all the answers. Got news for you johnnyboy, you don't, many of that older generation you seem to despise quite often know more than you ever will.

Yeah, I should have caught it myself - didn't seem right when I wrote
it, but too lazy to look it up, I guess!

Not sure I can agree with you on that point, Dave. It's been going on
for years on a pretty frequent basis - see my reply to Jim elsewhere
in this thread....

funny the only IP address on there is Internet Assigned Numbers
Authority, Googles, and Internet Assigned Numbers Authority hmmm so it
seems some one used a anonymous mailer, used my email address, and if
this was sent today it is fake since I'm no longer with consolidated.
So it is a fake coming from a liar. Anyone can fake a email address,
apparently you don't have the brains to understand that and
consolidated communication were stupid enough to believe your lying
ass. Just like those tapes of my program are fake....then again were
talking about that information coming from a liar

Something pretty compelling drives this sort of behaviour - that's
probably the seed, all right!

>
> Or: "Leggo my ego!" [and I'm not 'waffling' around :-)]

Ouch! :)

>
> Twenty years doing this kind of computer-modem communications
> and it is endlessly fascinating to watch the egos jumping up
> and down in high agitation! Everyone always "right" and
> everyone else always "wrong!"

That pretty much sums up my experience over the last twenty years
online as well - unlike in real life arguements - things are very
black-or-white in the newsgroups.....with little compromise. Didn't
seem quite as bad on the BBS systems, though - Usenet really seems to
bring out the big egos. YMMV, of course!

I find it continually amazing what people will argue over - or how passionate they'll get over the most simple and unimportant issue. I'm sure that there's a group somewhere on Usenet where death threats are exchanged over whether rotary dial phones are superior to TouchTone phones... :)

Can you imagine if real-life arguements played out like some of the ones in this little alternate reality? Somebody would end up doing some time for assault...or worse...

But here, in Fantasyland (not the one near you - this one...heh heh), everyone feels safe and secure, so the inhibitions drop. Look at the folks wrassling with some tool in another thread here for the last few days, for example - if that 'discussion' took place in a bar, he'd probably be waking up in Emergency somewhere early tomorrow morning. But, because it's here, and that possibility doesn't exist, it's no holds barred. Even the most bookish guy is Tyson when he's on here.....ding ding!

Funny thing is - people are trying to convince the guy that he's wrong, or heartless, or insensitive, or cruel - duh, it's obviously intentional trolling, but somehow, that got missed by several otherwise savvy folks..... Guess some peoples' radar doesn't work when the face-to-face interpersonal aspect is isolated from the conversation.

I will probably never fully understand the psychology of this.....

But, I suppose, as Barnum said..."There's a sucker born every minute."

Hey - maybe that's the psychology of this! :) :) :)

Hardly, ARPA's original USENET was the start of it all!

I saw it begin, clickety-clacking on a Model 33 wasting lots
of paper (that a corporation bought). Pages of sound and fury
signifying nothing much. Incurable mental disease infecting
all terminals!

>>>>I am simply persistent.

>Heh - I remember those commercials - good rewrite!

Alka-Seltzer would cure one headache, then induce millions to
have more with that commercial! It should still be in the
collection of famous commercials over at the Television Academy
on Lankershim Blvd in North Hollywood. Haven't been there for
a while...

>
>Not even a teensy bit? :)

Not for a boneheadedly stubborn true morse Believer fedayin!

I liken it to an excrutiatingly slow "suicide bomber" act.

Only thing is, only the "bomber" will destruct. It's like that
Opel (?) TV ad that was circulating around the net, the one
demonstrating the "great German engineering!" Funny!

>>>However - If I kept doing it every week or so for eight years, with no
>>>success, over and over again - yup, that might be a problem - I'd be

>probably the seed, all right!

"R U Siriusly" speaking (I'm a fan of Brewster Rockit, Space Guy),
it's the time-space insulation of the simplex communications via
computer-modem medium. Nearly everyone beginning that sort of
comms takes every word on the screen at face value...at first.

Some figure out that they can actually say ANYTHING they want
in a message (especially with no moderator there to censor them)
and they go bananas. They can say anything without fear of
reprisal. It's amazing the false courage these mighty message
warriors display! :-)

>> Or: "Leggo my ego!" [and I'm not 'waffling' around :-)]
>
>Ouch! :)

The pun is mightier than the sword? :-)

"When puns are outlawed, only outlaws will have puns!"

etc.

>> Twenty years doing this kind of computer-modem communications

>bring out the big egos. YMMV, of course!

No moderator present. All can drop their social conventions and
BE "all that they can (imagine) be." War heroes, sex kittens,
"doctors" (with PhDs from a correspondence "college"), all kinds
of better-than-everyone-else! :-)

As a co-sysop on a "social" BBS, actually a couple of them,
there was a chance to meet the real person in-person and find
out some were really what they said they were while others
were totally unlike their screen personna or just total flake
faux pas-sers. Lots of stories on that subject in this ultimate
geographical collection of really-real hams (in entertainment
industry). :-)

>I find it continually amazing what people will argue over - or how
>passionate they'll get over the most simple and unimportant issue.
>I'm sure that there's a group somewhere on Usenet where death threats

>TouchTone phones... :)
>
>Can you imagine if real-life arguements played out like some of the
>ones in this little alternate reality? Somebody would end up doing
>some time for assault...or worse...

Actually I was once quite close to a real-life argument going
on live. Was along one side of a mini-mall in Burbank, CA,
that had the local HRO outlet (now moved to the other side).
Two hams (apparently) were into the finger-in-the-chest sort

of fight foreplay when I passed close to them with some
finished dry-cleaning (neatly wrapped). Not wanting to go
through the dry-clean cycle again, I avoided the heating-up
situation. A third (ham?) guy came out and spoke to both
and I drove off to home without seeing any fracas. Something
about "sub-bands" and individual license classes seemed to be
the main thesis of the testosterone-adrenaline-pumping exchange.

Once, on a social BBS, a group of "avenger" males decided to
"change the mind" of a womanizing schmuck. They did and said
schmuck later departed for other sites of conquest. Younger
type males, one a reservist (military) helo driver. Heard from
him what went down. Not pretty.

>But here, in Fantasyland (not the one near you - this one...heh heh),
>everyone feels safe and secure, so the inhibitions drop. Look at the

>But, because it's here, and that possibility doesn't exist, it's no
>holds barred. Even the most bookish guy is Tyson when he's on
>here.....ding ding!

It's like a real macho tuffy sauntering into a bar and
announcing "he'll lick any man in the joint!" All the
patrons smile in his direction. Doesn't realize he walked
into a gay bar...

>Funny thing is - people are trying to convince the guy that he's
>wrong, or heartless, or insensitive, or cruel - duh, it's obviously
>intentional trolling, but somehow, that got missed by several
>otherwise savvy folks..... Guess some peoples' radar doesn't work
>when the face-to-face interpersonal aspect is isolated from the
>conversation.

I liken it to morse code mode communications. Monotonic
arrhythmic tone bursts representing words and phrases. NO
tone of voice clues, no real emotion, no body language clue,
just the beeping. The beeper could be male, female, or
some unknown species...no way to tell for sure. Some hams
say they "make lifelong friends this way." OK for them, but
that's a bit like buying a used car sight unseen.

>I will probably never fully understand the psychology of this.....

Ah, but the field observation can be totally fascinating! :-)

>But, I suppose, as Barnum said..."There's a sucker born every minute."

Er, you weren't IN that bar I mentioned, were you?

>He's doing it - I know he is..... and he knows that I know he's doing
>it too :)

Tsk, tsk. :-)

Thanks for the invite, John, but I already have a date with
a gal from East McKeesport to go out to the junkyard and
watch the cars rust...gonna be an exciting evening! :-)

Well, it's either than or watch my hard disk defrag.

Either one is more exciting than this "discussion" about
late leaders of a national socialist partei or the
Pennsylvanians are always right, no matter what!

Epoxy is curing in the workshop. Maybe I'll go in there and
watch it set up instead...

I didn't lie, Todd.

I forwarded those letters to Consolidated. I didn't generate
them.

However those letters aside, there's one thing YOU seem to not
grasp...And that is that even WITHOUT those e-mails, there was more
than adequate justification to pull your service.

You were warned. You ignored it. You lost your service.

It really is THAT simple.

> Just like those tapes of my program are fake....then again were
> talking about that information coming from a liar

Redirect your accusations of tapes, Todd. I don't ahve a horse in
that race.

> Todd N9OGL
> THE N9OGL SHOW
> 14.321.00 MHz
> Saturday@4.00 p.m. CST

There are no "shows" on Amateur Radio.

"Shows" are broadcasting.

If you're promoting a "show" on an Amateur Radio allocation,
you're breaking the law.

ah Stevie Boy nice to see you haven't changed a bit.

well in point of fact that statement is lie, but I am not shocked.
Still taking anything not confroming to your particular POV as proof of
illigality or falsehood. I noticed the Nursie refference made it up to
RN yet last I recall you were an LPN or was it PN the lowest rungs on
the nursing ladder

Hmmm easy enough to call that a lie. In sending anything anywhere you
do in some generate it, but then that would be simply doing, what you
are so good

>

Well, no.

According to your behaviour here, nothing Len does warrants a negative
reaction from you. In fact, your interactions with him and on his
behalf
show you approve of his behaviour here. That's what "he can do no wrong
by you" means.

That you disagreed with him in the past is incidental.
>
> >
> >>- giving me no reason to do any wrong to

> frequency (at minimum).

Well, no.

I first showed up on rrap in late 1997, less than 8 years ago.

There have been periods of much longer than a week when I was gone from rrap.

As for:

"telling him that his professional knowledge and experience isn't worth anything" - I haven't done that. I have said that his professional knowledge and experience don't qualify him for an amateur license, and that is a fact.

"acquiring a ham license is better than sex" - You won't hear that from me.

"a Ham without Morse is like a day without sunshine" - Not me again. I have said that a ham who doesn't have any Morse skills is not fully qualified as a radio amateur, and that is a fact.

"- or worse - rag on him every chance that I get that he is 'wrong' about something" - Not me! I have pointed out *some* of Len's mistakes, when he
has been in error - wrong - about something. Is that not allowed?

> >> ....well, then
> >> Len and I might have a problem getting along here.

The references to "Dreidel U." are very like Len's reactions when someone
catches him in an error and points it out.
>
> A few Google examples:
>
> Subject: Keep the quality, lose the spectrum Jul 17 1998
> "Len, you are just plain wrong here. You just don't understand the
> issue."

What *was* the issue? Was Len wrong about it?
>
> Subject: Who Is What? Feb 9 2001
> "No, Len, it is not correct. Let's look at what you wrote:"

What *did* Len write? Was he correct or not?
>
> Subject: ARS License Numbers Mar 4 2003
> "So you are incorrect again, Len. Mistaken. Just plain wrong."

Was Len correct that time? Or was he mistaken - just plain wrong?

> Subject: Wrong Again, Len! (Communicator Power) Mar 18 2004
> (Hmmm - that was your thread - quote not required for that one at all!

Well - was he right or wrong about "Communicator Power"?

> You don't think that eight years of "you're wrong, you're wrong..."
> wouldn't be deemed by a reasonable man to be a bit excessive?

Well, no. Not if the person really *is* wrong - mistaken - in error
about the subjects discussed.

Is there a time limit beyond which I cannot tell Len he's mistaken
about something?

> LOL!

> >
> >All you have to do is disagree with him about the Morse Code test,
> >defend
> >that opinion, and then point out an incosistency or two in his
> >postings.
>
> An inconsistency or two? For eight years?

I'm saying that if someone disagrees with Len about Morse Code testing
and then points out some incosistencies in Len's postings, Len will
go off in his typical fashion. Even if the errors are pointed out in
a courteous way, Len will go into attack mode.

> Do you actually believe that, after all of this time, that you are
> going to change anything by whining on?

"Whining on"?

btw, Len's been posting to rrap longer than I have, posts more and at
greater length than almost anyone else in rrap, and makes more mistakes
here than
I do as well. But I guess that's OK with you.

> Jeez, you'd make somebody a great ex-wife.... :)

Well, no.

> >> Wonder why that would be? Heh heh heh.

You didn't understand the analogy I made.

> You avoided my question, threw in
> your own to obfuscate the issue, and blamed it on my understanding?
>
> Not gonna happen, Bud!

The neighbour who borrows your tools and treats them badly but won't
lend you any of his is just like the person who asks you questions but

won't answer your questions. Why should you continue to lend the
neighbour tools - or answer someone's questions - when they behave
that way?

>
> >> After all, like you said, "It's a question of fairness and

You misunderstand.

It would be a simple matter for someone to write postings in one
location and have them posted to usenet from somewhere else. That your
postings to rrap originate where they do is not proof of where or who
their author is.

That's all.

> >> >> A few moderately

It appears that this whole exchange about obsession is really just a disguised way of telling me to shut up and let Len post his mistakes and attacks without challenge. That's really what you want me to do.

Maybe you have a point. Perhaps I should simply step back and let you, Len, Brian/N0IMD, and "John Smith" rant on without comment.

Maybe I will.

3434. Todd's Hero Backed Into Corner, Act's Like Caged Animal He Is...K1MAN's Radio Days Numbered

K1MAN EDITORIAL - ED050616 -

WHERE IS THE OTHER SIDE OF THE STORY?

You read what the FCC says about K1MAN. You read about what other
hams say about K1MAN. Where do you read about what K1MAN says?
ARRL? No! QST? No! CQ? No! World Radio! No! K1TP? No!
QRZ? No! What is wrong with this picture, you ignorant hypocrites?

I'd say "nothing". What obligation do those other entities have
to promulgate your BS and sad story?

You got yourself into this corner all by yourself.

The ignorant one is the idiot facing his third NAL just before his
license is due to be renewed!

No wonder the Arabs hate our guts so much.

For whatever reason persons of Arabic nationalities may dislike
the United States, I'm willing to be that NONE of them have ANYthing to
do with Amateur Radio.

No wonder Amateur Radio is going down the tubes, led by ARRL.

It's not going down ANY tubes led by the ARRL.

It's going "down the tubes" coutesy of lawbreaking,
hate-mongering, selfish punks like you, N9OGL, AB8MQ, etc etc etc...

I love both America and Amateur Radio, however.

No you don't.

If you did, you wouldn't break the laws of the first and
practicies of the second, then try to rub everyone's nose in it.

> K1MAN will be on for many many years to come...(SNIP)

I forecast no longer than your next renewl date plus the period of
time your application will be under review/prosecution.

>...(UNSNIP) and the true scum of our precious hobby and
service will be thoroughly exposed in the upcoming court proceedings.

"We" already know where the scum is. He's a selfish, self-centered
egotistical idiot living in Maine, with an ugly step-cousin in
Illinois.

K1MAN has been on the air with IARN information bulletins since 1987,
and the FCC is as powerless to stop them as K1MAN is powerless to stamp
out amateur radio ignorance.

Like I said....Your next renewal plus the period of time your case
is being litigated...Then...QRT.

Fear not fellow Radio Amateurs. You have the constitutional right to be
stupid!

That's really the way to generate sympathy and support for your
cause.

Only in America!

Only in America would a law-breaker like you be tolerated for so
long. Your "day" is past due. It's time to get the garbage off the
front step.

Join the American Amateur Radio Association today!

Why? It's not going to be around much longer either.

See www.K1MAN.com

Finally ponied-up the bucks for another Yahoo domain, I see.

K1MAN SAYS:

FCC ISSUES A $21, 000 NOTICE OF APPARENT LIABILITY AGAINST K1MAN

In a "NAL" released 7 June 2005, the FCC has opened a pandora's box,
according to Glenn Baxter...(SNIP)

What a self-glorifying putz.

Bet he's got family in Southern California.

Manager of IARN, the International Amateur Radio Network, and
AARA, the American Amateur Radio Association. Mr. Baxter was
recognized by the State of Maine legislature on March 13, 1991 and
named as a Vermont Academy Distinguished Alumnus on October 1, 1993 for
international amateur radio communications work with his IARN.

Jim Jones and Ted Bundy won civic service awards too.

Mr. Baxter says that this whole charade is being driven by petty ham
jealousy and the blatent incompetence of ARRL in failing over the years
to come even close to the work of IARN in emergency
communications work.

BBBBBBBBBBBBBBBWWWWWWWWWWWWWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
! ! ! ! ! !

Yeah...that's why the fed's are pouring hundreds-of-thousands of bucks into ARRL-sponsored and operated Emergency Communications programs!

Baxter welcomes these court actions since he has been trying to "face off" with the Commission for over 15 years. "Many heads are finally going to roll," acording to Baxter.

Nope.

Just one.

K1MAN's response is printed below together with the full text of the NAL.

In the matter of
Glenn A. Baxter, P.E.
Registered Professional Engineer

.....and UNregistered Court Jester...

Licensee of Amateur Radio Station K1MAN

File. No. EB-04-BS-111
NAL/Acct. No. 200532260001
FRN 0013164975

Reply dated 12 June 2005

Respondent Glenn A. Baxter, K1MAN, denies any apparent liability for forfeiture in the amount of $21,000 or any other violations of FCC rules, state law, or federal law...(SNIP TO...)

Respondent hereby requests the Commission to supply all documentation regarding the alleged apparent liability and criminal violations for respondent to use in preparation for the again demanded trial like hearing before the full Commission and for the other court actions.

It's apparent that Glennda is going to be representing hisself.
Had a real attorney been requeting this information, there wouldn't have been any grandstanding or "opening remarks" in his request.

Respondent will be calling witnesses, introducing affivavits, and further demonstrating many ACTUAL criminal violations of Sections 333 and 501 of the 1934 Communications Act by numerous persons complained about by your respondent and others in Felony Complaint Affidavits filed with the U.S. Attorney including the two FCC officials mentioned above.

Oh no! Glennda is going to waive his "felony complaint affidavits" in front of a REAL judge ! !

BBBBBBBBBBBBBBBBWWWWWWWWWWWWWWHHHHHHHHHHHHHHHHHHHHHHHHHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
! ! ! ! ! ! ! ! !

Maybe this is where Glennda leads the court to believe he's off
his rocker in an attempt to avoid prosecution of the complaints!

Whatta schmuck!

Steve, K4YZ

> Really? I have no need for an extra class, (sniveling excuses
flushed,like Butt Cornholer's license will soon be flushed)

Excuses, excuses. And pathetic ones at that. If you were so good at CW, then you would've passed the 20 wpm code requirement years ago. Instead, you make excuses for just one of your many shortcomings.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!

> Name (poor Butt Cornholer, always a loser, always.)

Poor Butt Cornholer, he couldn't even pass the 20 wpm code test when it was a requirement. He couldn't pass the 5 wpm requirtement today, either.

Wow. A LECTURE!

Tom, try to calm down and look at the big picture. Growing
dementia ("Alzheimer's") in older people and is a terrible
thing to observe up-close and personal. I'm quite familiar with
that, having watched my own mother go through that, little bit
by little bit every day, the last four years of her life in a
nursing home. I visited her every day and could see others in
the same hospital succumb slowly...and share the inner turmoil
of their family and friends watching their loved ones. The
same with those other patients having various physical damage
from injury or illness. Three hundred beds in that one
single-floor facility, seen every day.

Go ahead, make my day, try to lecture ME on "taking all that so
very, very seriously" about handicaps and illnesses...

>I am still awaiting John for specifics on what you have done to foster an
>appreciation in younger people for the service.

Not a requirement of amateur radio licensing, Tom.

>General bitching about the way things are won't cut it ...that my friend is
>too easy and is the tact of a pontificating twit.

...and you are as guilty as anything of doing the SAME
"pontificating" about Alzheimer's suffering.

It's no more, no less of a pontification than all the high and
mighty amateur extras in here praising the glory and majesty
and "necessity" of morse code testing or rank-status-privilege
"due them" in a HOBBY activity involving radio.

> Yesterday was a day I
>will always remember at our club meeting. Matt, a teen with a LD passed his
>no code. He studied his backside off for the test ....took it 3 times
>before. I have more respect for that young fellow than incessant moaners I
>see on this list and in other places.

Now that's just a wonderful thing...out of the blue comes a nice
MORAL LECTURE about a younger person "overcoming all obstacles"
"despite physical handicaps" "working hard, hard, hard to pass
a test." Reads like second-rate Reader's Digest material.

I've never met that young person, Tom, just like YOU have never
met hundreds of other sufferers of various things...which I don't
mention in here because they don't apply to THE SUBJECTS AT HAND
either.

At stake is some federal regulations regarding amateur radio, a
HOBBY activity, a recreational pursuit done for personal
enjoyment. "Overcoming obstacles" is NOT a part of the overall
picture. Morality lectures to others don't help a bit...except
to cure the lecturer's mild rage at others not taking things
so damn "seriously" as the lecturer does.

Oh, wow, "overcoming the obstacle of learning morse code!"
Terrific emotionally-loaded over-limit baggage. The real question
ought to be the TEST itself and why it "must" be passed just to
enjoy a radio hobby below 30 MHz. But, that isn't a thing for you
or anyone else who has already passed that TEST, is it? The real
purpose is to keep on with the myth where "hard, hard WORK" is
such a "moral necessity" and perhaps - in a screwball perverse
way - somehow closer to Godliness?

I've known, seen, been around all sorts of folks with handicaps,
just as I've already legally and successfully operated on HF in
five other radio services other than amateur radio. Any TEST
for a LICENSE is just a regulatory tool of the federal government.
That license is NOT an academic achievement, is NOT soem magic
talisman that one "Must" posssess in order to operate any radio

transmitter below 30 MHz. Morsemanship isn't a "qualification"
to operate below 30 MHz...I was long-ago perfectly qualified to
operate a radio transmitter below 30 MHz without morse code smarts
and did. That morse TEST is an artificiality of old-time emotion
that has long-since passed its usefulness. The TEST itself, and
the license, is just a regulatory tool...for a radio HOBBY.

Those who want to preach a ham radio LIFESTYLE will be outraged
at the above. TS. I got a new punch and am set for lots of
cards. I'm a bit sick and tired of these emotionally-loaded
MORALITY plays by the self-righteous unfolding in this stage.
A lot of readers are feeling the same way. Put on a bad
performance and you get bad reviews. TS. That's show biz...

3443. 27.620 FM Repeater heard ! (new rare 'DX catch')

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-22 18:40:19 UTC
From: SWL DX News <73varney@nosp.ucdavis.edu>

Exercpted from The KY4KY News : http://ky4ky.com/fyi.htm

(6/19/05) Floating Freeband (FM) Repeater On * 27.620 *

If you hear what sounds like a repeater outputting in the spectrum
between the 11 meter class D citizens band and the 10 meter
ham band, it's not an illusion. Rather it appears to be the creation
of some enterprising Freebanders who are operating this
latest, unlicensed repeater.

According to several reports received by Newsline, and others
posted to various Internet websites, the system in question
outputs on 27.620 MHz FM. It also seems to be located
not far from Pennsylvania's eastern most border.

But there is the interesting part. While it's not yet been
verified, the word on the street is that the input kind of floats
around the low end of the 10 meter ham band. There is some
speculation that the operators of this repeater monitor
the input frequency and move it when ham radio operators
running legal high power Morse come on the air on top of it.
At least there have been reports of strange announcements
which may be information to users as to where the input will next be found.

One Internet post describes this machine as one of a new
breed of Freeband roving repeater of the type first noticed
in the St. Louis area about two years ago. That is, those
who run these systems are physically moving the frequencies
and the geographic location of the machine to avoid detection
by ham radio T-Hunt squads and the FCC.

This is just the latest report in a string of 11 meter repeaters
that go way back to the early 1970's when
Freebanders - then called H-F'ers -- began tying together old
crystal controlled 11 meter AM transceivers as repeaters.
Most had outputs on channel 1 or 2 and inputs on CB Channel 40
or above. None worked very well and most were soon abandoned.

Note: We heard the "27.620 Machine" just before noon today in SE MO.
No word yet of they have a "QSL card address", although if they do this
\would be a RARE CATCH to confirm.

I have never even attempted to guess her name, 2test.

Wogie make good spell. What's 'haven'\t' BWHAHAHAHAHAHAHAHAHA!!!!

> Poor Butt Cornholer, no credibility
> about his pi;lot's license, cw skills, 1 st class radiotelephone
> license or anything.

You're correct 2test wogie, I don't have a 'pi;lot's' license, whatever
that is. I do have a pilot's license though. Poor 2test, not only had to
retest to keep his ham license, but can't type or spell either.
BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!
How is the jamming on 20 meters going lately 2test?

>
> Excuses, excuses. And pathetic ones at that. If you were so good

I'll be control opping W3GA Gota station from State College during the day. Mostly 20 and 40 meters phone and PSK31, which is a big hit with the new folks. In the evening, I'll be shifting over to W3YA. 40 and 80 meter phone. GOTA is 100 watts, and the other stations are QRO.

Since there will be a lot of RF flying around, we'll probably put up a recieving dipole at the allowable perimeter.

Darnit!!! We're supposed to hear about how it was uphill both ways
juss like the real hammes claim.

> However, to kill time waiting for the return train, I saw a
> matinee of "Oklahoma." Sat in the balcony, undisturbed. That

No real hamme could have survived that.

Yet PCTA Larry Roll/K3LT's ubiquitous use of "persons with a southern accent" was perfectly acceptable.

And Dan's initial use of profanity in an otherwise civil debate on amateur radio policy issues is not a problem.

Oh, the PCTA double-standard! When will it end? Where will it end?

Participating with the Hazel Park Amateur Radio Club.

This year I thought to myself how can I get amateur radio into the awareness of non-amateurs. So Monday evening, I sent an email to the staff where I work explaining the message sending activity on Field Day and encouraged anyone interested in sending greetings to friends or family via amateur radio to let me know. Four people have actually contacted me about this so I am really pleased.

Perhaps it was good advise in your case.

I tested for General. The Morse Code sped by at an incredible rate,
and I did not pass. In retrospect, this must have been the diff
between Morse Code and the advent of the ARRL VEC use of the Farnsworth
Code.

Anyway, the consolation prize was the Technician license. The Novice
enhancement came later, so was not a player.

3461. Re: 27.620 FM Repeater heard ! (new rare 'DX catch')

The Charleston and Little Rock freeband repeaters are linked
to business band repeaters and a seldom used ham repeater in one
case. There is a set up in Nashville where a repeater is cross
linked to repeaters in three other radio services.

That was precisely the point that N2EY made. What part of it didn't
you understand?

> Many of the "dx" operators do NOT have the means by which to
> obtain megabucks multimode/digital Amateur facilities.

How can they "hide down on CW >>>EVEN MORE THAN THEY ARE NOW<<<"
possible if they don't now have other modes available???

Idiot!

And I don't recall David Heil K8MN as RARE DX hiding "down on CW in
downtown Dar El Salaam" to avoid calls on SSB from out-of-band
Frenchmen on 6 Meters!!! He went for it!!!

Obviously, you don't understand the concept of arbitrariness.

N2EY has it down to an Art!

And you have it down to a dumb shrug and a question mark!

Let's face it square on. You're just N2EY's unwitting, unintelligent
little hatchet man.

But, but, but...

If the ARRL DX desk don't approve it ain't ham radio. They approved
the Frenchmen's excursion outside of France's 6M band!!!

> Finally, the idea of separating the contesters by limited and unlimited

It is common knowledge that many small contestors are ther to snag DX
and nothing else.

At the end of the day, the big $$$ stations win. Everyone else
supplies contacts.

When wasn't it so?

> This is just a punitive plan toward the big stations.

So you think the big $$$ stations won't go for it?

> One time I listened to one of the high-powered, high scoring stations

Yep. Recall the many, many, many times you've had to say to the qrp
station, "Say again all after xxx."

Far, far, far below. Revisit the notion when you've got that 746 and a
tri-bander at 60'.

That is the bottom of "average."

> But I put in a big booming signal to New England, and was definitely
> limited by my own skills, (still working on 'em) and not my below

Now you're talking contesting.

I'm not sure I understand that. As I remember the FCC universally used
those paper tape machines. And the method, although not called Farnsworth
that I can recall, was the same. I.E. Code sent at a fast rate with
spacing larger. This is the Farnsworth method.

Of course I may be wrong. But explain what you mean.

Hello, Cal

Frankly, the K1MAN thing seems so tiny in the scheme of things. Folks are leaving this area in droves (unemployment 6% and not all are counted. I'm not, but I'm looking for work. Something about receiving a pension ....). Gasoline is expected to hit $3.00 per gallon next year. I have two friends hurting for jobs. One, who has her BA degree, developed back problems that prevented her from sitting for extended periods. She left the Rochester Institute of Technology and is now running a cash register behind a pharmacy at TOPS supermarket. I suspect for $8.00 to $8.50 per hour.

Another has her BA degree. She lost her job at Kodak a few years ago (I lost mine in 2004) and has had a lot of trouble finding decent, permanent employment. We are all in our mid to late 50s. Of course, the answer is to raise the Social Security age.

Roadwork is being held back due to the high cost of asphalt.

My former employer has had a former executive charged in a scheme involving kickbacks to get the assessment of the property reduced. Hmmmm ... to 1/3 of what it was? The former (Republican) town assessor of Greece (a suburb of Rochester) has been charged as well as an independent assessor. Meanwhile, the former employer insists the assessments are fair and valid. The kickbacks involved many millions of dollars.

Anyone found the infamous weapons of mass destruction? Meanwhile, Bush fiddles while Rome burns.

K1MAN? Not even on my radar screen. Heck, give him a 50,000 watt clear channel AM broadcast station for all I care.

I'm not condoning K1MAN, nor arguing against him; I am simply saying that there are much more serious things going on in this country and around the world than the K1MAN question.

I do, however, appreciate the fact that if one person (or group) can do it, he feels he can do it. That, however, still precludes advertising. Beyond that, I'll not get into it further.

For honest news, however, I'd suggest the BBC (or an Australian or Canadian site).

Best regards from Rochester, NY
Jim AA2QA

Your example is specious, Mike. Generally the contester who builds a competition grade station has also invested in building the skills and techniques to take advantage of the capabilities they have sought in their station design.

Watchyerself, laddie. If it'd do yer heart a wee bit a good, me grandfather was Scottish (U.K. citizen). And I'm entitled to a work visa there ... ;)

Remember, they're our friends, pal. One of *very* few countries left that we can count as friends LOL

BTW, their tax structure is lower than ours (if you make less than 40,000 pounds sterling per year (a bit under 80k USD). Don't forget that Social Insecurity. Of course, it is higher than ours for folks earning more. Not a whole lot, but enough to balance budgets.

Also, as an aside, do you have any idea where the U.S. stands in infant death rate? Or life expectancy? It ain't in the top 10, trust me. Life expectency? It ain't in the top 20 or 30 either. Must be folks dropping dead looking for the weapons of mass destruction!

BWAAHAHAHAHAHAHAHA!

Oh, I forgot. Asphalt. Expensive due to the cost of oil. Remember the tax breaks for the over 6,000 pound SUVs that got extended? More money for the oil companies.

I know this is difficult, but do look up the change in population of the U.S. and the whole world from, say, 1900 or so. I understand that some folks think this can go on forever. If you need me to, I'll get the figures and tell you when humanity weighs more than the whole earth (what is it, 16 quadrillion tons?). Then explain how we will farm the sea to support it.

<<snort>>

You detect bias if you don't hear it from Cowboy Bob ... I mean George Bush and the spin gang. That spin is faster than a 52X CD rom (or dremal).

73 from a G3 wannabe LOL

OK.....

What SPECIFIC FREQUENCIES do they operate on then ??

Please provide your list of the same or a URL with info on the same.

Thanks!

> the same hospital succumb slowly...and share the inner turmoil
> of their family and friends watching their loved ones.

Then I am sure you would agree that we do not need to name call and use
those problems as a source of a cheap shot....

The
> same with those other patients having various physical damage
> from injury or illness. Three hundred beds in that one
> single-floor facility, seen every day.

Am I lecturing you Leonard ????..don't think so ... I just don't like to
see peoples misfortunes utilized for cheap shots for whatever reasons ....
I really think that we on this group are ALL above that.

> Go ahead, make my day, try to lecture ME on "taking all that so
> very, very seriously" about handicaps and illnesses...

Again where did you pull that from Len .... did I say you took those shots
as mentioned above ???? Don't put words in my mouth there Len ..... the
post was not addressed to LA

>
> >I am still awaiting John for specifics on what you have done to foster
an
> >appreciation in younger people for the service.

> Not a requirement of amateur radio licensing, Tom.

Quite right Len but as a "hobby" don't we have a bit....just a bit of
responsiblity to help others .....I have seen your postings on other groups

where you have done the same .....and not to be patronizing but to your credit.

> >General bitching about the way things are won't cut it ...that my friend is
> >too easy and is the tact of a pontificating twit.
>
> ...and you are as guilty as anything of doing the SAME
> "pontificating" about Alzheimer's suffering.

Just as you brought your poor mom into the mix ???????

Nope general bitching is just that .....give me some positives .....

> It's no more, no less of a pontification than all the high and
> mighty amateur extras in here praising the glory and majesty
> and "necessity" of morse code testing or rank-status-privilege
> "due them" in a HOBBY activity involving radio.

Now Len you don't know me that well do you ..... I do not consider myself the morse elite ......I have suggested things in the past regarding the place the mode, excuse me protocol, could be better served not only for the amature service but for CW itself ....

> > Yesterday was a day I
> >will always remember at our club meeting. Matt, a teen with a LD passed his
> >no code. He studied his backside off for the test ....took it 3 times

> MORAL LECTURE about a younger person "overcoming all obstacles"
> "despite physical handicaps" "working hard, hard, hard to pass
> a test." Reads like second-rate Reader's Digest material.

No Len it reads like a person despite some real problems showing some inititive and passing a test honestly. Your second rate Reader's Digest comment is a cheap shot. And may I add CW had nothing to do with this test as Matt got his No-code tech .....

>
> I've never met that young person, Tom, just like YOU have never
> met hundreds of other sufferers of various things...which I don't
> mention in here because they don't apply to THE SUBJECTS AT HAND
> either.

Oh no look out here comes the off topic lecture ..... The above comments were taken from and about the discussions on this group. Please point out to me where my comment have not been ...THE SUBJECT AT HAND .....

>
> At stake is some federal regulations regarding amateur radio, a
> HOBBY activity, a recreational pursuit done for personal
> enjoyment. "Overcoming obstacles" is NOT a part of the overall
> picture.

Oh yes it is Leonard ...look at the Handiham program and what is done there ..... those people aren't overcoming obstacles ???? I have worked many people on the air who have multiple problems where this "hobby" has been a source of enjoyment over the years.

Morality lectures to others don't help a bit...except
> to cure the lecturer's mild rage at others not taking things
> so damn "seriously" as the lecturer does.

No rage here Leonard ....just discussion .....and as far as taking things seriously on this group .....the overwhelming number of Leonard posts over the years sure bears whose rage is in this arena.

>
> Oh, wow, "overcoming the obstacle of learning morse code!"

Where in the heck have I mentioned anythng about overcoming the obstacles of CW in this latest round of comments????? Again trying to put words in my mouth Len ....please don't do that ...it really is good engineering practice ......

> Terrific emotionally-loaded over-limit baggage. The real question
> ought to be the TEST itself and why it "must" be passed just to
> enjoy a radio hobby below 30 MHz.

Have any of my posts with in the last several years reflected the CW or die mentality ?????

But, that isn't a thing for you
> or anyone else who has already passed that TEST, is it? The real
> purpose is to keep on with the myth where "hard, hard WORK" is
> such a "moral necessity" and perhaps - in a screwball perverse
> way - somehow closer to Godliness?

Here we go again with the church of CW ......frankly I am tired of this tact ...it belongs with CW always gets through and the old buddywhip-standard transmission saw ....

>
> I've known, seen, been around all sorts of folks with handicaps,
> just as I've already legally and successfully operated on HF in
> five other radio services other than amateur radio. Any TEST
> for a LICENSE is just a regulatory tool of the federal government.

Maybe not for you and your position in the radio kingdom but for many it is an achievement and I for one will not belittle those who worked for and achieved a ticket honestly ...no matter what class it is ....

> That license is NOT an academic achievement, is NOT soem magic
> talisman that one "Must" posssess in order to operate any radio
> transmitter below 30 MHz. Morsemanship isn't a "qualification"
> to operate below 30 MHz...I was long-ago perfectly qualified to

Generally but not always, Hans. Here's an example: Joe Moneybags has
always admired the photos which Hans Brakob takes. He notes that Hans
always uses a top of the line Nikon. Joe sells his Canon and buys the
expensive Nikon. His photos are still not up to the Brakob standard.
Joe fails to realize that the skill of the photographer is more
important than the price or model of the camera. You have to have seen
something similar a dozen times in DXing or contesting.

Do you think so Hans? I have examples of just that, and it has been my personal experience. Your statement is true as far as it goes, but I've seen what happens when the newbies have access to the competition grade setups, as sometimes happens during events such as Field day

So many of the newbies I have worked with come in with the expectations of sitting down, throwing the tuning knob around, and calling, then waiting for the pileup. They get frustrated with the work that you have to put into the more modest setups.

Many times we are told that the station "isn't working". And of course it is. An experienced and patient operator can start making QSO's immediately. One of the newbies decided that he wanted to use the QRO station and referred to the GOTA as a "toy station".

Those QRO stations are powerful competition for lower powered ones. It is not terribly difficult to twiddle the knob, start calling CQ, and getting return calls. Problem is, it doesn't tend to make you a good contester.

And that is my basic point. If people want to claim it is specious,
then I guess they mean that the equipment is much more important than
the operators skills.

All you have to do is pump money into the contest station, and assuming
you pump the most money into it, you will win.

Sounds ridiculous to me. Perhaps my with my setup, I should just give
up. I don't stand a chance of even doing well, much less winning, eh?

Or perhaps a person can hone their skills using a modest setup, then
move on to a hot station and start doing very well.

I wonder how many Ops have started at the top?

I think I'll buy an Indy car. If I buy the mostest expensivist one,
I'll surely win all the races, eh?

Hello, John

My you bounce around a lot :)

Given my druthers, I'd pick someone who has shown the capability to do a job other than someone with a gift of gab. We had a couple of those back in the 80s. One they caught up with - he was running up long distance phone bills to the company and was a real gem. The other could turn out twice the pile of paper of the experienced folks. I left in 1989. I sent an e-mail 2 years later asking if they had figured out why they had lost half of their purchasing information. LOL! They had the guys in the 3 piece suits from IBM running around trying to figure out what happened. I knew. They guy professed to be a genius and he pushed twice the paper of the older guys. His code was terrible. When he hit end of file on either co-ordinated file, he closed everything. Which left records in one of the buffers. The company got exactly what it deserved. I reworked one program. What cost us $150.00 per run ended up costing $1.45. It just took a little more code (which is why he pushed out more paper, but it cost them dearly). The cpu budget was over $700,000 per year in that area. They could have cut their cost from 60% to 90%, depending upon how tight they wanted to write the code. This was not my estimate; rather it was the estimates from 3 folks that reviewed my submissions with highlighter over the sections that were bad.

As far as hams go, I'd choose a guy who could figure out how to load up a stupid wire fence to re-establish communications with Guam from Saipan. I know as I was on the other end when Hans did exactly that. I had to go to

work and other guys picked up with no questions asked. Then, Captain Delaney came to the shack and secure those guys from all further duty and they passed traffic to ComNavMar directly. No problem. Military folks who could follow orders and hams than knew what to do (the regular Navy folks couldn't figure out what to do with a signal that was overloading their receivers).

I'm willing to help someone who wants to measure their antenna "resistance" with an ohm meter, but if they insist, well, go at it with a DVM :))

Heck, I've had my 5 or 10 minutes of fame. Pulled a kid out of a river years back who was going under. No big deal. I heard Hans (sparkplug1) and answered him, starting the communications between Saipan and Guam. No big deal. I showed my former employer how to do 8 hours of tool engineering work in 15 minutes (yes, I wrote a program to generate the ladders).

My question is this: who would you trust? Someone with several instances of "15 minutes of fame" or someone who talks a good story but has nothing to show for it?

I'm not suggesting shutting out young folks, that would be stupid. I am suggesting not shutting out older folks simply because they are getting old. That is also very stupid.

The fact that someone can copy cw at 30 or 40 words per minute does *not* mean they don't know anything else. Trust me on that.

Admittedly, we slow down a bit as we age. I can't easily do much over 60 or 65 words per minute typing. I used to feel a 100 word per minute teletype fighting me as I did bursts in excess of 90 words per minute. I could keep a 60 word per minute machine going continuously so that the other station assumed I was using a tape.

Who cares? How many folks can type over 60 words per minute? Cut and paste does *not* count. I can do that also LOL.

With all due regards from Rochester, NY
Jim AA2QA

Hello, Mike

I'm not sure it is necessarily the young folks. I keep hearing that pi is exactly equal to three.

Dang, I'm getting old. I thought it was approximately 3.14159265358979323846264338327950288419716939937510.

Of course, I may have well made a type. I know another 50 places or so, but if I didn't make a typo in the first 50, I sure as heck will in the next 50 LOL.

Funny how they love their cell phones and satellite television. I keep hearing that the theory of gravity is only a theory, but, if you try, you will find that you can't achieve a stable orbit with anything but the established "theory". Of course, even Einstein was mistaken for a janitor and also dismissed by folks after WWII about the dangers of atomic fission and fusion. He was, after all, old and decrepit.

BWAAAAHAHAHAHA!

Have they found the weapons of mass destruction yet?

I hear they know where Bin Laden is. So ... ????

Nada. Zilch. Zero. It is claimed that they don't want to offend certain nations. Yet, I hear that the U.K. is left-leaning. You know, I am getting sick to my stomach of the "spin" some folks are putting on things.

Sounds like a plan! Ol' Danny is getting worse. Now he thinks
I am claiming "combat action." Maybe I'll claim SEVEN of them
just to keep him happy? It works for another. :-)

The Vietnam War ended 30 years ago. I guess this post-traumatic
stress stuff really gets to some...and lasts a long time...

More and more I'm thinking the PCTA extras are going bonkers
from too much beeping.

But you HAVE claimed combat action, Lennie!

You repeatedly try to impress us with how you "served" with guys who were KIA, and you were quite eloquent trying to tell yet another person what it was REALLY like being under "incomming artillery fire"... ! ! ! ! !

> The Vietnam War ended 30 years ago. I guess this post-traumatic
> stress stuff really gets to some...and lasts a long time...

It must...You've been suffering PTSD from Korean War service even though you weren't anywhere near the fight.

> More and more I'm thinking the PCTA extras are going bonkers
> from too much beeping.

No....It only seems that way as you fall deeper into your OWN psychosis, Lennie...Comes from too much ranting and raving in newsgroups that you don't belong in.

"Mr. Baxter" has no standing here.

He's broken the law...repeatedly.

The weight of the federal government is about to (finally) land
square on his head.

With any luck, the next "thrust" "Mr Baxter" will experience will
be courtesy of his new roomate, Bubba.

Gee...the style says Markie the Disgraced Pagan Liar, but too many
multi-syllable words spelled (or pretty darn close) correctly.

And who said I am an RN? I didn't.

> > I forwarded those letters to Consolidated. I didn't generate

You do not "in some generate it" by repeating something, Markie.
You may retransmit it, copy it, report it, etc, but you do not
"generate" it. Only the original author did that.

> > However those letters aside, there's one thing YOU seem to not

What does being a Christian or conforming to Christian principles
have to do with reporting a person breaking the law, Markie?

Is it your psotition that anyone calling 9-1-1 to report a crime
in progress is un-Christian?

Are the viewers of "America's Most Wanted" un-Christian?

Compared to the absolute rape of the English language as
perpetrated by you, Markie, occassional transposed letters ae
nothing...at least they are the CORRECT letters...You all-too-often
don't even get THAT right!

> > "Shows" are broadcasting.
>
> not always but then one must not use words in different manner than you
> aprove of.

It's not what >>I<< approve of, Markie.

It's what the FCC approves of.

> sounds he mean he holds court on the freq, and time, but you
> realy did know that

Know what?

That he's illegally using Amateur Radio allocations to
broadcast...?!?! Yeah, I know that...HE is the one with perception
problems.

Run out of Illiopolis, did they..?!?!

I (don't really) wonder why...You're such a GREAT guy to have
around!

And what did Illinois do to deserve such a wretched reputation as
to be the birthplace of Lennie, Toiddie >>AND<< you...?!?!?

> at least you have droped the 73's from your posted vitriol

You have gotten SLIGHTLY better at writing, although your
sentences are still disjointed, improperly punctuated and leave the
reader wondering if you fell asleep in the middle of a sentence when
you stopped writing.

And BTW...you're NOT any "old friend" of Amateur Radio...I rate
you only about 2/10ths of a point above Lennie Anderson, but still well
below Brain Burke, who is trying desperately hard to get down there,
although he slips occassionally and leaves me with hope for his soul.

I have no such delusions about you.

Me too, Jim and Mike...

Seems that it's not technology they object to as much as science. Like any science that says the earth is more than about 6000 years old. Or science that shows we share an enormous amount of DNA with other primates. Or any science that says maybe we shouldn't have so many babies, because the earth can only support a limited number of people. Global climate change? Hole in the ozone layer? Just theory, from "liberal academics"...

Nothing new - look what happened to folks like Galileo who said the earth wasn't the center of the universe. Next thing ya know they'll take "Inherit The Wind" off the shelves...

Nope - it was a joke. A 'Top" college - Dreidel (a child's toy top) -
get it? Anti-semetic - no. It rhymes (well, sort of) with Drexel -
your good ol' alma mater.

Heh heh.

It was a zing, though - you are right about that. Not sure what they
teach there, but research skills and accuracy don't appear to be
weighted very heavily...unless you picked up those bad habits after
you left.....

Good catch, though!

>
>> >I didn't take any 20th Century World History courses.
>>
>> Heh...I'm pretty sure that we are all aware of that now, Jim!
>>
>> >> >
>> >> >> You of course realize that there is a school of thought that
>> >> >> invocation of Godwin's Law can be interpreted to include any

>> error", etc. for at least the last eight years, with almost weekly
>> frequency (at minimum).
>
>Well, no.

Oh, yeah!

>
>I first showed up on rrap in late 1997, less than 8 years ago.

Sorry - you're correct - make that seven and a half years then. LOL!

>
>There have been periods of much longer than a week when I was gone from
>rrap.

Yup - we all take vacations. On average, though, I'd estimate a
frequency of (conservatively) once per week. That means three times
this week, and none over the next two, et. etc. equals an average
frequency of approximately weekly. Actually, I have probably given
you the advantage here - it may be even more.....

They taught averages at Dreidel, didn't they?

>
>As for:
>
>"telling him that his professional knowledge and experience isn't worth
>anything" - I haven't done that. I have said that his professional
> knowledge and experience don't qualify him for an amateur license, and
>that is a fact.
>
>"acquiring a ham license is better than sex" - You won't hear that from
>me.

It wasn't a literal, Jim - interpret!

>
>"a Ham without Morse is like a day without sunshine" - Not me again. I
>have said that a ham who doesn't have any Morse skills is not fully
>qualified as a radio amateur, and that is a fact.

It wasn't a literal, Jim - come on, guy - use that education!

>
>"- or worse - rag on him every chance that I get that he is 'wrong'
>about something" - Not me! I have pointed out *some* of Len's mistakes,
>when he
>has been in error - wrong - about something. Is that not allowed?
>
>> >> ....well, then
>> >> Len and I might have a problem getting along here.
>
>The references to "Dreidel U." are very like Len's reactions when
>someone
>catches him in an error and points it out.

Once again - a reference back to Len. Does your whole world revolve
around this guy? Why?

>>
>> A few Google examples:
>>
>> Subject: Keep the quality, lose the spectrum Jul 17 1998
>> "Len, you are just plain wrong here. You just don't understand the
>> issue."

>
>What *was* the issue? Was Len wrong about it?

Not the issue, Jim. The frequency over time is. Please try to
comprehend.

>>
>> Subject: Who Is What? Feb 9 2001
>> "No, Len, it is not correct. Let's look at what you wrote:"
>
>What *did* Len write? Was he correct or not?

Not the issue, Jim. The frequency over time is. Please try to
comprehend.

>>
>> Subject: ARS License Numbers Mar 4 2003
>> "So you are incorrect again, Len. Mistaken. Just plain wrong."
>
>Was Len correct that time? Or was he mistaken - just plain wrong?

Not the issue, Jim. The frequency over time is. Please try to
comprehend.

>
>> Subject: Wrong Again, Len! (Communicator Power) Mar 18 2004
>> (Hmmm - that was your thread - quote not required for that one at all!
>
>Well - was he right or wrong about "Communicator Power"?

Not the issue, Jim. The frequency over time is. Please try to
comprehend.

In each example, do you believe that your opponent could care less
whether he was wrong?

Might there be an ulterior motive? Heh heh heh.

>
>> You don't think that eight years of "you're wrong, you're wrong..."
>> wouldn't be deemed by a reasonable man to be a bit excessive?
>
>Well, no. Not if the person really *is* wrong - mistaken - in error
>about the subjects discussed.

Therein lies the nature of the affliction. Nobody, least of all Len,
cares that you think that he is 'wrong''. It's being done to torment
you and get you to respond, for the other person's pleasure.

The rest of the folks here will watch - much like rubberneckers
looking at an accident on the highway.

You have become just that - a tragedy on the 'Information Highway'.
(oh, how I loathe that expression....!).

You're being used, Jim. Sad you cannot see it.

Real sad.

>
>Is there a time limit beyond which I cannot tell Len he's mistaken
>about something?

Sure -to infinity and beyond, if your are OC enough to go the
distance! Heh heh heh.

>
>> LOL!
>
>> >
>> >All you have to do is disagree with him about the Morse Code test,
>> >defend
>> >that opinion, and then point out an incosistency or two in his

>and then points out some incosistencies in Len's postings, Len will
>go off in his typical fashion. Even if the errors are pointed out in
>a courteous way, Len will go into attack mode.

To turn your crank, and get you dancing and hopping again - nothing
more.

>
>> Do you actually believe that, after all of this time, that you are
>> going to change anything by whining on?
>
>"Whining on"?

Whining on. Correct. Did I not spell that right or something?

>
>btw, Len's been posting to rrap longer than I have, posts more and at
>greater length than almost anyone else in rrap, and makes more mistakes
>here than
>I do as well. But I guess that's OK with you.

I could personally care less. I am not obsessed.

>
>> Jeez, you'd make somebody a great ex-wife.... :)
>
>Well, no.

Hell, yes! wrong, wrong, wrong, wrong -- on and on ad infinitum.
like a demented parrot.

>
>> >> Wonder why that would be? Heh heh heh.
>> >
>> >> >> I simply refuse to
>> >> >> join you in your obcessive crusade against him.
>> >> >
>> >> >You can't join what doesn't exist.
>> >>
>> >> Oh, it's there, all right. You read some of the stuff you write?
>> >
>> >I read all of it. Do you read the responses I get from Len?
>>
>> I certainly do. Do you think that will ever change?
>
>Probably not. So what?

So why contimue? If you will achieve nothing, why go on? Are you
incapable of controlling yourself?

Find The Strength!

>
>> Or do you enjoy being used for entertainment - laughed at, not with?
>
>"ARE YOU BEING ENTERTAINED?!"

um - if you are still going ahead with this quote from the movie
"Gladiator" - well, no.

The correct quote is "Are you not entertained"

Source: http://www.imdb.com/title/tt0172495/quotes

If you are asking, however, if i am entertained by your antics - the
answer is no. And yes. I like to watch a good accident as much as
the next guy - it's human nature!

Heh heh heh.

>
>> >> Jeez, I'll bet you dream about the guy!
>> >
>> >Nope.
>>
>> Yup. In Technicolour.
>
>Well, no.

Panavision then? With DTS sound.

The sad truth is - you are obsessed with the guy. Period.

We see it - you should try to do so as well, for you own sake....

> >
>> >> >> Heh. "Those who ain't with me are agin' me....!"
>> >> >> - what movie was that from again???
>> >> >
>> >> >Not a movie - a good description of Len's newsgroup behaviour,

>
>You misunderstand.

Misunderstand what? You as much as said that you can't trust anybodt
- and provided several valid arguements to support that supposition.
I merely stated it in conclusion.

You are, again, -um-, in error, Sir.

>
>It would be a simple matter for someone to write postings in one
>location and have them posted to usenet from somewhere else. That your
>postings to rrap originate where they do is not proof of where or who
>their author is.
>
>That's all.

Well, no. Most commercial ISPs block rebroadcast of newsgroup
messages from sources not directly connected to their NNTP servers
(i.e. their subscribers direct links from their homes to the ISP) -
this is done to prevent their networks being used illegally for
transmission of massive volumes of SPAM.

If you post to the groups through Google, this does not apply - that
is not an ISP.

I sincerely hope that your comprehension of the radio arts is
significantly superior to your knowlege of the mechanics of the
Internet.

>
>It appears that this whole exchange about obsession is really just a
>disguised way of telling me to shut up and let Len post his mistakes
>and attacks without challenge. That's really what you want me to do.

Not at all. It is indended to illustrate to you that your valiant
battle is in vain - your opponent is not interested in the least in
what you say. His only goal is to control you - which is pretty easy
to do. You have all of your hot buttons proudly and prominently
displayed - and every bloody one elicits a predictable response when
pressed: your ire, passion and rage.

In short - you, Sir, are being hijacked against your will.

>
>Maybe you have a point. Perhaps I should simply step back and let you,
>Len, Brian/N0IMD, and "John Smith" rant on without comment.

I, kind Sir, do not rant. I communicate.

And educate.

And research before I post.

>
>Maybe I will.

God grant you the strength. I, however, am not optimistic that you
can break free.

Think about it - if you spent all of the time that you have wasted
here being a playtoy for others on more productive activities, what
could you have accomplished?

That would have been a lot to extra hours on the radio (DXCC, all
modes, all bands perhaps?) - or a second degree at night school (we're
talking a lot of hours, as you well know) - built yourself a brand new
car entirely out of spare parts, or many other useful things. Here,
over the last nine years, in all of your attempts to 'correct' those
who 'play' with you, you have accomplished: Nothing. Same arguements
- no progress. Zilch.

You got an F.

The song remains the same as it did nine long years ago.

What a colossal waste of talent! Yours, that is.

And, of course, as I have also illustrated quite clearly in this thread - well, with your level of accuracy and depth of research, you ain't really the guy who should be running around telling everyone else that they are wrong. When your emotions gain control over your intellect - you will lose.

Every time.

Without question.

If you stick to areas where you are a subject matter expert, try to educate only those who are truly interested in learning ffrom you, and avoid those who will prey upon your obsessive personality - and you'll be better off.

Or don't. Either way, we'll all watch! Screeeeeeeeeeech...BAM!

Your call.

73, Leo (hmmm - 73 de N2...etc sig missing yet again - wonder what's the deal this time?)

The difference is that they didn't build that station themselves.

> So many of the newbies I have worked with come in with the
> expectations

I think one of the main purposes of FD is that sort of
education. Let folks try out new (to them) rigs, new antennas,
operating techniques, etc., and see what *really* works. And
let the newbies see how it's done.

> Many times we are told that the station "isn't working".
> And of course it is.

Cockpit trouble. Short-circuit between the headphones.

> An experienced and patient operator can start making QSO's
> immediately. One of the newbies decided that he wanted to use
> the QRO

> station and referred to the GOTA as a "toy station".

"younger and more capable minds"....

I've had similar experiences on FD. Some folks think they're
doing well to make QSOs on SSB at a certain rate with a beam and 100 W
transceiver, with an op and a logger. Exhausted after an hour or two,
they wander over to the CW tent and find me working
them at 2, 3 or more times their rate, with a dipole, "old"
transceiver, and no logger.

The reactions when presented with a manual transmatch were
priceless, too.

> Those QRO stations are powerful competition for lower powered

>
That's why it might be a good idea - next year - to run all ~100 W
setups.

I will go on the record with the prediction that Element 1 will NOT go away completely as first thought. It will be dropped for Tech "+" and General privies, but retained for the Extra. I think enough folks have written to the FCC, as well as their elected officials, (Some of whom have a say in the FCC's budget.) and expressed their wishes that we not follow suit with the nations that have completely dropped the code from their licensing process. Hats off to Japan as well in this respect.

sorryJim but failing to back up an opinion doesn't mean they can't, may mean they simply choose not to bother

Yessireesir! Markie's back!

The President of the IIII....Illiterate Illinformed Idiot from Illinois.

Not THAT idiot...the ORIGINAL!

Failing to "back up an opinion", Markie, means that either the author was wrong, didn't have the facts, shot their mouth off just to be heard or doesn't have the faith of conviction in his/her own beliefs to stand behind it.

MY OPINION is that you need to move back to Illinois and marry Todd Daugherty, N9OGL. Maybe Lennie would move back (he's originally from IL) and officiate for you? You two are cut from the same cloth...Hmmmmmmmm...maybe a bit TOO close...Forget what I said...He's probably in your bloodline and that would be incest.

On the otherhand...you might LIKE that kind of thing....Lord knows...you've certainly expressed more bizarre interests than incest before.

Steve, K4YZ

I am willing to bet that you've got the right combination, at
least for now, Bert.

I see a two class license structure on the next "restructuring"
round. That's not to say I like it or support it, but I bet that's
where we end up.

We have many hundreds every QSO party. And since much less than half
submit logs, the total participation is much higher. Some people are
just in the thing for fun.

And no, I don't know why they don't.

I prefer the State QSO parties. We have a number of classes,

High power, medium power, QRP. We have a CW class with QRP and
medium/high power. We have classes for rover and mobile.

Now that I am the chairman of ours, we'll be adding digital modes.

We encourage the development of operating skills by giving multipliers
for the more difficult modes, such as mobile and QRP. This encourages
people to work those more difficult operations.

> People have a tendency to improve their stations....

It has been my experience from being on the air, and among those I know
personally that most hams have a fairly modest setup. 100 watts, maybe a
g5rv, and a competent but not spectacular rig. Obviously that isn't
everyone, but it seems do describe teh great majority.

Of course, mayber the really big stations won't descend to talk to me! ;^)

And that experience is *exactly* why I am convinced that the operator
is so much more important than the setup.

I'm willing to admit I am incorrect, but not unless someone can come up
with an alternate explanation that hold water.

The unskilled operators don't do very well even with an excellent
setup, and the skilled operators do well with a more mundane setup that
the new or less experienced have a lot of trouble with.

Specious, or wrong, I'd love to hear the alternatives.

Yup. It worked for me, and I've seen it work for others. We've gottem a
couple new hams (or gotten inactive ones back) every FD I've been at.

This assertion is different from your original question which implied that 100W/dipole stations are manned by better operators than "knob twiddlers" found at better equipped stations. My assertion is that competition-grade STATIONS ("competition grade" does not mean "most expensive") are built and operated by competition-grade radiomen. Witness K1TTT, KC1XX, W3LPL, W0AIH, N0AT, K0KX, K3LR, W7RM, etc., etc.

(or 5 wpm) for that matter.....

Poor Butt Cornholer, he couldn't ever pass the 20 wpm
requirement when it was in effect, which proves his claims of
doing 30+ wpm are unsubstantiated, like everything else he
claims.

I knew you'd just make up another lame excuse for your oh so
many shortcomings.

Keep thinking everybody is Roger, too, dumbass.

SUBJECT: Amateur Radio license KC8JBO

Dear Mr. Wiseman:

Pursuant to Section 97.519(d)(2) of the Commission’s
Rules, 47 C.F.R. Section 97.519(d)(2), the Commission has the
authority to re-administer any examination element previously
administered by Volunteer Examiners (VE’s). The Commission
may either administer the examination itself, or under the
supervision of a Volunteer Examiner Coordinator (VEC) or VE
designated by the Commission.

Accordingly, we are requiring you to re-take the General Class
Amateur Examination, (Elements 2, 3(A) and 3(B)) under the
supervision of an American Radio Relay League Volunteer Examiner
Coordinator. This examination must be completed on or before
September 11, 2000. The required code speed that you must
demonstrate is 5 words per minute.

Poor Butt Cornholer, the actual retest letter proves he is a
liar, again and again.

BTW, When Roger initially got his General in 1999, he passed a
13 wpm cw exam. Like what was required for your obsolete
Advanced.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!

It was a question, Hans. Not an implication. It isn't an either or
proposition either. I'd be purdy dum to think that those who have more
mundane setups have better ops than those at the better stations.

And I would still want to have that good op with a 100 watt station
than the not so good op at the "contest station".

Obviously the best setup is the good op at the good station.

> My assertion is that competition-grade STATIONS

Of course. But this whole tangent of the thread was based on my
assertion that between the good operator and the good equipment, your
best to side with the good operator.

Kinda like buying that huge Craftsman (or Snap-On or whatever) tool set
and cabinet doesn't make you a master mechanic. However, many master
mechanics have that same tool set.

Presuming all else is nominally equal, that's true. But "all else" is seldom
"equal". Which is why a world-class op like K0SR with his black-hole city-lot
QTH is never invited to WRTC, passed over in favor of regional-class ops from
more propagationally favored locales.

Sounds like a plan! Ol' Danny is getting worse. Now he thinks
I am claiming "combat action." Maybe I'll claim SEVEN of them
just to keep him happy? It works for another. :-)

The Vietnam War ended 30 years ago. I guess this post-traumatic
stress stuff really gets to some...and lasts a long time...

More and more I'm thinking the PCTA extras are going bonkers
from too much beeping.

>
>No lecture the Mr. Len just that I can't see injecting this in to the mix

<snip>

Tom, you had a LECTURE going whether you meant it or not.

That happens every once in a while when someone feels like they
have to proctor morality or preach "good works."

In truth, I posted a STRONG response...but that's because
I've seen a half century's worth of such LECTURES all about
HAVING to "help the young ones" or all about some deaf, blind,
dumb quadriplegic person "finally passing their ham test." As
if the ham test is some Holy Grail to seek, the ultimate test of
one's life?

Amateur radio is a HOBBY. De facto if not de jure. [that means
"in fact" even though it is not explicitly defined in some law
or regulation as such] NO ONE "owes anyone" for something they
do when no money has changed hands. If someone feels obligated
to another, fine, that's a personal thing to that someone. But,
that is NOT in any rules or regulations, and its "requirement"
is just inside some folks' heads...besides the Sumner editorial
pages in QST.

If you or anyone else has TRUE enthusiasm for some hobby, you
can PROJECT that to others and share the enthusiasm. If you
know more than they do, you can - if you are still enthusiastic
and want to share - help them out by increasing their knowledge.
Your enthusiasm for something will help you impart such new
knowledge to them. Even after over a half century of being
involved in radio-electronics, I'm still fascinated by it and
am still enthusiastic about learning more...but that does NOT
mean that I "MUST" "teach others" or any of that false "good
works" stuff for THEM. That's not any sort of "moral obligation"
that I "MUST" do in any hobby. Nor for anyone else with their
hobby. Hobbies are personal activities done for personal

enjoyment and recreation purposes.

As to the "service" word in Title 47, C.F.R., if you ask the FCC they will tell you it is "a regulatory term denoting the type and kind of radio activity being regulated." It does NOT imply some grandiose "national service" at all. Ah, but "the FCC says so" say many, not understanding what the FCC is saying...and then they get all confused when I point out other services such as the Citizens Band Radio SERVICE, the Radio Control Radio SERVICE, the Family Radio SERVICE and so forth. It's in Title 47 in nearly every Part.

Now, some folks seem to be tuckered out by all the lifting of THEIR emotional baggage, at the use of "certain words" and "certain phrases." In here lots seem to be carrying very OLD baggage, complete with those stickers from olden times as if they were there (even though they couldn't have) plastered all over that "baggage." Sorry, the boat don't go there no more. Time travel to "happier times" hasn't been invented yet. FCC rules and regulations apply to time NOW and there's lots more citizens of the U. S. of A. who MIGHT be interested in a radio license and have much more modern "baggage" without all those old-time travel stickers on it. Old-timers do NOT "own" the hobby despite what they think and shout and demand.

Some folks get a big kick out of being "re-enactors" of every-thing from midieval life to the American Civil War. Fine. If that's what makes them happy, I say "have fun" and go for it. But, trying to ENFORCE such "re-enactment" by keeping hard and fast rules in LAW to freeze an activity in old, outmoded standards and practices goes beyond the reasonable. LAW applies to ALL, not just a bunch of old-timers trying to re-enact a time when most of them did not exist. The future cannot be eliminated by mere legislation holding it static.

A "job?" :-)

Is amateur radio a "job?"

> We had a couple of those back in the
>80s. One they caught up with - he was running up long distance phone bills
>to the company and was a real gem. The other could turn out twice the pile
>of paper of the experienced folks. I left in 1989. I sent an e-mail 2
>years later asking if they had figured out why they had lost half of their
>purchasing information. LOL! They had the guys in the 3 piece suits from
>IBM running around trying to figure out what happened. I knew. They guy
>professed to be a genius and he pushed twice the paper of the older guys.
>His code was terrible. When he hit end of file on either co-ordinated file,
>he closed everything. Which left records in one of the buffers. The
>company got exactly what it deserved. I reworked one program. What cost us
>$150.00 per run ended up costing $1.45. It just took a little more code
>(which is why he pushed out more paper, but it cost them dearly). The cpu
>budget was over $700,000 per year in that area. They could have cut their

>cost from 60% to 90%, depending upon how tight they wanted to write the
>code. This was not my estimate; rather it was the estimates from 3 folks
>that reviewed my submissions with highlighter over the sections that were
>bad.

Okay, send me your TS card, I'll punch it. [got a new punch]

>As far as hams go, I'd choose a guy who could figure out how to load up a
>stupid wire fence to re-establish communications with Guam from Saipan. I
>know as I was on the other end when Hans did exactly that. I had to go to
>work and other guys picked up with no questions asked. Then, Captain
>Delaney came to the shack and secure those guys from all further duty and
>they passed traffic to ComNavMar directly. No problem. Military folks who
>could follow orders and hams than knew what to do (the regular Navy folks
>couldn't figure out what to do with a signal that was overloading their
>receivers).

Oh, boy! Heah come de "Guam-Saipan" hams-save-the-day story
again! :-)

>I'm willing to help someone who wants to measure their antenna "resistance"
>with an ohm meter, but if they insist, well, go at it with a DVM :))

>Heck, I've had my 5 or 10 minutes of fame. Pulled a kid out of a river
>years back who was going under. No big deal. I heard Hans (sparkplug1) and
>answered him, starting the communications between Saipan and Guam. No big
>deal. I showed my former employer how to do 8 hours of tool engineering
>work in 15 minutes (yes, I wrote a program to generate the ladders).

Your certificate is in the mail, credited with 45 minutes for
three (3) Warhols. [mailed in a plain, brown envelope]

>My question is this: who would you trust? Someone with several instances of
>"15 minutes of fame" or someone who talks a good story but has nothing to
>show for it?

Everyone MUST have a personal webpage with their homebuilt kluge
displayed on it. [praise endorsements from neighbors optional]

>I'm not suggesting shutting out young folks, that would be stupid. I am
>suggesting not shutting out older folks simply because they are getting old.
>That is also very stupid.

Don't olde-fahrts RULE in here?

>The fact that someone can copy cw at 30 or 40 words per minute does *not*
>mean they don't know anything else. Trust me on that.

Really? :-)

>Admittedly, we slow down a bit as we age. I can't easily do much over 60 or
>65 words per minute typing. I used to feel a 100 word per minute teletype
>fighting me as I did bursts in excess of 90 words per minute. I could keep
>a 60 word per minute machine going continuously so that the other station

>assumed I was using a tape.

Been there, done that. Did you want a Certificate for THAT, too?

[Teletype Corporation is DEFUNCT]

>Who cares? How many folks can type over 60 words per minute? Cut and paste
>does *not* count. I can do that also LOL.

Is there a "typing test" in amateur radio license examinations?

Last I heard, there was just this morse code test for manual
skill demonstrations.

You should write the VEC QPC and insist they include a question
on How To Wire A Fence To Restore Guam-Saipan Communications For
MARS! Maybe Hans could help you with that letter? [a thought]

Oh, by the way, computer source code is NOT the "code" that is
supposed to be talked about in here. Has nothing to do with
ham radio, I'm told. [just passing along an advisory]

Wanna compare ACM membership numbers? :-)

> Tom, you had a LECTURE going whether you meant it or not.
>
> That happens every once in a while when someone feels like they
> have to proctor morality or preach "good works."

No not preaching good works Len ...just in some small way trying to make some people think about what they say and using cheap shots with unfortunate situations. A number of years ago I called a radio station and complained about the jocks using a lady and her breast cancer as a "joke". The fellow I talked to brushed me off as if it was an OK thing to do ..... sort of reflective of our society... unfortunately.

> In truth, I posted a STRONG response..

No problem Len ...

.but that's because
> I've seen a half century's worth of such LECTURES all about
> HAVING to "help the young ones" or all about some deaf, blind,
> dumb quadriplegic person "finally passing their ham test."

No Len just an example of courage ..... and my comment was in response to moaning vs something positive ...

As
> if the ham test is some Holy Grail to seek, the ultimate test of
> one's life?

If only my salvation were dependent on that Len ..... lets see the big radio club in the sky .... I'd have to think about that before I would step through the gaits ....sort of like the 72 virgins or so that are promised ...could anyone go through eternity with 72 women on their case .... sounds like the other place ...

> Amateur radio is a HOBBY. De facto if not de jure. [that means
> "in fact" even though it is not explicitly defined in some law
> or regulation as such]

Some say yes and some no ...to be honest Len I let that quit bothering me years ago ...it is what it is ... and besides thanks for the translation as I haven't been in a Latin text since 70 or so ....

NO ONE "owes anyone" for something they
> do when no money has changed hands. If someone feels obligated
> to another, fine, that's a personal thing to that someone. But,
> that is NOT in any rules or regulations, and its "requirement"
> is just inside some folks' heads...besides the Sumner editorial

> pages in QST.

I see the personal things to someone all the time ...that makes this veil of tears a little more bearable for all ...

> > If you or anyone else has TRUE enthusiasm for some hobby, you

> am still enthusiastic about learning more...

Good point Len ....

but that does NOT
> mean that I "MUST" "teach others" or any of that false "good
> works" stuff for THEM.

I'll let that up to someone else to determine if it is false or not ....

That's not any sort of "moral obligation"
> that I "MUST" do in any hobby. Nor for anyone else with their
> hobby. Hobbies are personal activities done for personal
> enjoyment and recreation purposes.

I think Len, in all fairness, that this is a point that you are missing by not being directly involved with this "hobby". The very essence when all is stripped away is that you need someone to communicate with lest we would all be shortwave listeners .... ergo help the other fellow or at best don't interfere with his enjoyment.

> As to the "service" word in Title 47, C.F.R., if you ask the FCC
> they will tell you it is "a regulatory term denoting the type and

> Time travel to "happier times" hasn't been invented yet.

Twern't no such place ever ....

FCC
> rules and regulations apply to time NOW and there's lots more
> citizens of the U. S. of A. who MIGHT be interested in a radio
> license and have much more modern "baggage" without all those
> old-time travel stickers on it.

I would have to agree especially with the MIGHT part ....

Old-timers do NOT "own" the
> hobby despite what they think and shout and demand.

Na Len ....not an owner just a renter on the spectrum of life ....

> Some folks get a big kick out of being "re-enactors" of every-
> thing from midieval life to the American Civil War. Fine. If
> that's what makes them happy, I say "have fun" and go for it.
> But, trying to ENFORCE such "re-enactment" by keeping hard and
> fast rules in LAW to freeze an activity in old, outmoded
> standards and practices goes beyond the reasonable.

Resonable ...I guess that is dependent on whose ox is being tested for what
.... for now it is regs that exist ....as I have said before I will not rent
my clothes and pour ash on my head when 5 WPM goes .... there are a lot
better things to do ...

LAW applies
> to ALL, not just a bunch of old-timers trying to re-enact a
> time when most of them did not exist. The future cannot be
> eliminated by mere legislation holding it static.
>
> LenAnderson@ieee.org

Take care Len .... Tom KI3R

In the world of toil and sin .....
your head grows bare but not your chin ...

Well, no. It was actually a failed attempt at a joke. If
you have to tell the audience that something is a joke,
it isn't one.

> A 'Top" college - Dreidel (a child's toy top) -
> get it?

Is that the best you can do?

> Anti-semetic - no.

Anti-Semitic. More accurately, anti-semantic.

> It rhymes (well, sort of)

Not really

> Because you have not completed your research on the topic.

No I haven't.

> You fail to have grasped it's essence.

Well, no. I just don't agree with your interpretation, that's all.

BTW, "it's" is a contraction for "it is", not the possessive form of
"it".
Didn't they teach you that at *your* alma mater, Leo?

Yes, it is. You're avoiding the fact that Len was, in fact, wrong then.
>

> In each example, do you believe that your opponent could care less
> whether he was wrong?

Doesn't matter one way or the other. The fact is that in all of the
above cases, and many more, Len posted information that wasn't true.

You avoid that fact for some reason.

> Might there be an ulterior motive?

Of course. I realized that long ago. In fact I mentioned it here
back on Feb 10, 2003. Your research is very incomplete, Leo.

>
> >> You don't think that eight years of "you're wrong, you're wrong..."

> Therein lies the nature of the affliction.

Yes, Len is afflicted by the inability to admit a mistake
when it is pointed out by someone he considers an inferior, like me...

> Nobody, least of all Len,
> cares that you think that he is 'wrong''.

Why not be honest, Leo?

You don't care. Maybe Len doesn't care. You don't speak for
everybody.

> It's being done to torment
> you and get you to respond, for the other person's pleasure.

Well DUH!

"His hobby is wasting time. Your time"

Guess who wrote that?

The fact is that Len spends much more time and effort posting here than
I. Always has. Gets all upset and outraged over any opposition. Now you
may say it's all an act, but so what?

> The rest of the folks here will watch - much like rubberneckers
> looking at an accident on the highway.

Do you speak for everyone who reads rrap? Or just for you?

> You have become just that - a tragedy on the 'Information Highway'.
> (oh, how I loathe that expression....!).

Sounds like another disguised way of you telling me to shut up.

Why not be honest and just say it?

> You're being used, Jim. Sad you cannot see it.
>
> Real sad.

It may appear that way to you. The truth is very different.

> >Is there a time limit beyond which I cannot tell Len he's mistaken

>
> To turn your crank, and get you dancing and hopping again - nothing
> more.

Look at his postings compared to mine. It's not me who is dancing and
hopping.

> >> Do you actually believe that, after all of this time, that you are
> >> going to change anything by whining on?
> >
> >"Whining on"?
>
> Whining on. Correct. Did I not spell that right or something?

You mistake my persistent strong opposition with "whining". Another
attempt to get me worked up. Doesn't work. Leo.

> >btw, Len's been posting to rrap longer than I have, posts more and at

> >
> >Well, no.
>
> Panavision then? With DTS sound.

Nope. Not once.
>
> The sad truth is - you are obsessed with the guy. Period.

The real truth is that if anyone is obsessed, it's Len. And/or Brian,
N0IMD. Not me.
>
> We see it - you should try to do so as well, for you own sake....

Who is "we"? Are you the Pope? Lots of Pope Leos, btw..

Unlike Len, I have many civil, uninsulting

Well, no.

One of the limitations of online communication is that it's difficult
or
impossible to tell when someone is pretending to be dense and when
someone
really *is* dense....
>
> >

> Internet.

Think outside the box, Leo.

Someone in Location A writes a newsgroup post. Sends the post as a
textfile to
someone else in Location B. Someone else then posts it to Usenet. Looks
like
it came from Location B but it didn't.

> >> >> >> A few moderately

Yes, it is. Do you not want me to shut up?

> It is indended to illustrate to you that your valiant
> battle is in vain - your opponent is not interested in the least in
> what you say.

Of course he's interested - otherwise he wouldn't respond!

> His only goal is to control you - which is pretty easy
> to do. You have all of your hot buttons proudly and prominently
> displayed - and every bloody one elicits a predictable response when
> pressed: your ire, passion and rage.

Well, no.

You have me confused with Len.

> In short - you, Sir, are being hijacked against your will.

Heck no.
>
> >Maybe you have a point. Perhaps I should simply step back and let you,
> >Len, Brian/N0IMD, and "John Smith" rant on without comment.
>
> I, kind Sir, do not rant. I communicate.

You've ranted on here at great length, Leo. Much longer than me.

> And educate.

> And research before I post.

Feb 10, 2003.

> >Maybe I will.
>
> God grant you the strength. I, however, am not optimistic that you

[not counting the AOL ham radio group, of course...]

>>"acquiring a ham license is better than sex" - You won't hear that from
>>me.
>
>It wasn't a literal, Jim - interpret!

Literal...literary...literati...litorati. All fused together in
some minds. That, of course, leads to mental lithiasis. :-)

As Obi Wan said later, "may the aphorisms be with him..."

>>"a Ham without Morse is like a day without sunshine" - Not me again. I
>>have said that a ham who doesn't have any Morse skills is not fully
>>qualified as a radio amateur, and that is a fact.
>
>It wasn't a literal, Jim - come on, guy - use that education!

Tsk, he should be working on the "Four Morsemen of the
Apocalypse" phrase...

>>The references to "Dreidel U." are very like Len's reactions when someone
>>catches him in an error and points it out.
>
>Once again - a reference back to Len. Does your whole world revolve
>around this guy? Why?

He honors me? :-) Nahhhhh...

Outside of having a nosh now and then in Kantor's in Hollywood,
I'm not daily involved with any Yiddish phrases and never grew
up with such ethnic toys. [excellent pastrami there] Contact
diminished remarkably about 41 years ago...BTASE (But That's
Another Story Entirely).

>>Well, no. Not if the person really *is* wrong - mistaken - in error

>more.

Actually, considerably more. I consider myself a "WMD" (Weapon
of Morse Destruction). Low-yield, of course, not bearing the
imprimateur of that "federally-authorized" callsign. As such,
ANY pro-morse position gets boresighted and locked-on for a
full magazine and semi/full auto mode as needed. Tsk.

Progress is very slow, but there IS progress. The U.S. ham
regs dropped to 5 WPM for all classes a while back...before
S25 got rewritten at WRC-03.

>>> Or do you enjoy being used for entertainment - laughed at, not with?

Nope.

Just having some fun with others who insist on being funny.

Kinda like you do from time to time.

Have a nice day.

Steve, K4YZ

>Of course. I realized that long ago. In fact I mentioned it here
>back on Feb 10, 2003. Your research is very incomplete, Leo.

That is indeed an interesting point.

Unfortunately - well, no again.

Your statement was something like "his hobby is wasting time - your
time."

I really don't think that 'wasting time' is what it's all about, Jim.
Do you?

It's about control. Specifically, controlling you. And making you
squirm and dance.

Unless you are saying that you actually understand that you are being
abused intentionally by others. And have done so since 2003. And if
so....you continue to post the same "wrong, wrong, wrong" garbage here
- knowing full well that you will continue to be abused for the
pleasure of others.

Does that seem like particularly sane bahaviour to you?

Are you a fool? Or a masochist? Or both?

>
>>
>> >> You don't think that eight years of "you're wrong, you're wrong..."

>when it is pointed out by someone he considers an inferior, like me...

If by "inferior" you mean "controlled by someone in a superior
position" (i.e. boss, tormentor, etc.) - then he is correct.

You jump on command. Every time.

You can't help yourself.

>
>> Nobody, least of all Len,

Of course I don't speak for everybody. Nor do you, although you seem
to envision yourself as on some sort of a crusade to defend the
'truth'. In an impossible situation. Cast in a role as a playtoy.

I see.

>
>> It's being done to torment
>> you and get you to respond, for the other person's pleasure.
>

I look at it another way...

The basic evaluation factor in contesting is "what are the limitations"
- IOW, what limited/limits your score?

Put up the classic "100W midrange HF transceiver and G5RV at 40 feet"
station. Paper logs.

If you sit an unskilled op in front of it during a major contest, the
score will be mostly limited by the operator's skill, not the setup.
Put a skilled op in the same seat, and the score will be mostly limited

by the setup.

The key to improvements is to identify what the limiting factors are, and how to deal with them. That's where SO2R came from in the first place. The top ops found that their scores were being limited by the choice between running contacts and grabbing multipliers. SO2R permits doing both at almost the same time. For an op capable of using such a setup well, it removes a limitation. To an op who is not so skilled, it won't make much difference.

Your on the right track Mike. Work on your skills. Best way to do that is to operate at a, shall we say, less than competitive setup. Makes you appreciate the improvements as they come.

That is why the loss of the Novice license is such a disaster to Amateur Radio.

We used to have to dig em out of the noise, hand on rx and follow them up/down the band. Not much for filters, just your ears and brain. But that's another subject.

I've had similar experiences on FD. Some folks think they're
doing well to make QSOs on SSB at a certain rate with a beam and 100 W
transceiver, with an op and a logger. Exhausted after an hour or two,
they wander over to the CW tent and find me working
them at 2, 3 or more times their rate, with a dipole, "old"
transceiver, and no logger.

The reactions when presented with a manual transmatch were
priceless, too.

73 de Jim, N2EY

Yeah it is. I was at a FD a few years back and I fired up the "bug". You
should have seen their looks of amazement. Had em standing in line to ask
me questions afterwards.

Here's an update on the "when will FCC drop Element 1?" pool.

Note how almost everyone's date, including mine, has already passed:

WA2SI: September 13, 2003 (first prediction)
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004 (first prediction)
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004 (first prediction)
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N4PGW: May 22, 2005
N8UZE: July 1, 2005
N3KIP: December 31, 2005 (second prediction)
K2UNK: July 1, 2006 (second prediction)
AB2RC: July 1, 2007
KB3EIA: July 5, 2007
W5TIT: June 1, 2008
WA2SI: Complete elimination not within the foreseeable future (second prediction)

Anybody want to add a prediction? If so, the "rolling rule" (thanks Dee, N8UZE) applies:

If your prediction on this list is a year or more in the past, you can add a new one.

At this point everyone before and including N4PGW can add a new prediction.

All predictions stay on the list.

This year I decided to try something a little different. Early this week, I sent an email to the people in my office briefly describing Field Day and how one of the things we do is send messages. I then told them that they could help us with our message sending practice by giving me messages to send to friends and family. Well I am very pleased to report that I have 13 messages to send from non-hams to other non-hams. At least a few people will be exposed to amateur radio to a small degree.

Ben met Anna
Made a hit
Neglected beard
Ben-Anna split

He used a match
To check gas tank
That's why they call him,
Skinless Frank

Said Juliet
To Romeo
If you won't shave
Go homeo..

Speed was high
Curve was sharp
White robe, halo
Wings and harp

Trains don't wander
All over the map
'Cause no one sits
On the engineer's lap

He had the ring
He had the flat
She felt his chin
And that was that

Stop at crossings
If you'd be spared
Trains don't whistle
Because they're scared

For a few years, one of the local university clubs would operate from
downtown. They'd setup outside the downtown building the club is
normally at, and just use a long piece of coax to the antennas on
the roof if I remember properly.

Perhaps not as much fun as setting up in the country, but it had the
advantage that any passerby could see what was going on, rather than
forcing people to go out of their way to see what was going on.

The former reaches new people, the latter only reaches those who
already know.

Steve, those letter your generated through the blog...On the blog there
is a letter where people can send a copy of the post to a friend and
add a comment, someone was getting on there and sending the mail to you
with my email address, I have proved it through a experiment and the
header text proves it, It just that some dumbass at consolidated would
listen to some crybaby from Tennessee instead of a paying customer,
that's OK I'm make sure no one in this town and surround area
subscribes to their internet service. that letter you post on here was
sent via a different blog...but a moron crybaby like yourself would
understand that.
However those letters aside, there's one thing YOU seem to not
grasp...And that is that even WITHOUT those e-mails, there was more
than adequate justification to pull your service.

>You were warned. You ignored it. You lost your service.
>It really is THAT simple.

No Stebie, what you don't understand is that I am not forcing you to
read my messages on this newsgroup, hell there are messages on here I
don't read, but your STUPID that you can't "grasp" the concept that you
don't have toi read them.

>You were warned. You ignored it. You lost your service.
> It really is THAT simple.

No I lost my service because those Dumbasses at the phone company would
rather listen to a moron from tennessee then a customer paying $36 a
month for a service...but hey they ought to thank you for screwing them
out of that monthly cash flow...and I'll push it here that NO ONE will
go to their service...because they would rather listen to some asshole
then a customer.

> There are no "shows" on Amateur Radio.
>"Shows" are broadcasting.
> If you're promoting a "show" on an Amateur Radio allocation, you're breaking the law.

Yet you not yet proved it, show me the law. A broadcast is a
transmission directed to the general public either direct or relayed.
an Information bulletin is "A message directed only to amateur
operators consisting solely of subject matter of direct interest to the
amateur service."

The Subject matter I run is on radio, electronics, computers, and radio
law....so Crybaby Steve, you go cry to all the f**king represenatives

and the FCC you want my programs are legal until you or your little bitches at the FCC prove to me otherwise. that's the other difference between me and K1MAN....SO go CRY to the FCC you F**king asshole.

Todd N9OGL
THE N9OGL SHOW

> header text proves it, It just that some dumb## at consolidated would
> listen to some crybaby from Tennessee instead of a paying customer...(SNIP)

And for the billionth time, Todd...

Those letters themselves wouldn't have mattered.

There was enough LEGITIMATE stuff to "can" you.

I reported it. Consolidated agreed.

And IF YOU HAD LISTENED TO ME in the first place, no one would have
been able to take advantage of the blog like that.

> (UNSNIP)...that's OK I'm make sure no one in this town and surround area
> subscribes to their internet service...(SNIP)

Yeah..uh huh...Right...

Chances are that if people find out WHY you were canned, they'll
be MORE likely to join Consolidated just becasue they know that
Consolidated is concerned with keeping trash off the Internet, even if
it is just one piece at a time.

> (UNSNIP)...that letter you post on here was
> sent via a different blog...but a moron crybaby like yourself would
> understand that.

I understand it just fine.

What YOU continue to ignore is that those letters weren't the only
reason you got canned.

>> However those letters aside, there's one thing YOU seem to not
>> grasp...And that is that even WITHOUT those e-mails, there was more

>> than adequate justification to pull your service.
>>
>> >You were warned. You ignored it. You lost your service.

> read my messages on this newsgroup, hell there are messages on here I
> don't read, but your STUPID that you can't "grasp" the concept that you
> don't have toi read them.

No, you're not.

But then this is a PUBLIC forum and a certain amout of decorum is
expected (or should be) "MF", "AH", "CS" and other such adjectives
are NOT language you typically hear walking down the street or walking
through Wal-Mart, and I don't think it's appropriate here.

Then when you DIRECTED it at me, well, that cinched it.

> >You were warned. You ignored it. You lost your service.
> > It really is THAT simple.
>
> No I lost my service because those Dumb###es at the phone company would
> rather listen to a moron from tennessee then a customer paying $36 a
> month for a service...(SNIP)

Seems to me the "moron" was the customer who thought that
$36/month was a license to be obnoxious, mistruthful and idiotic with.

> (UNSNIP)...but hey they ought to thank you for screwing them
> out of that monthly cash flow...and I'll push it here that NO ONE will
> go to their service...because they would rather listen to some @@@hole
> then a customer.

In this case the @@@hole WAS the customer.

So far, you've blamed...

me for being a crybaby...

Consolidated for actually enforcing their own regulations and
threats...

Buzz Corey for, well, who knows why...

The ONLY person you've NOT blamed is the person responsible for
your predicament...

YOU!

> > There are no "shows" on Amateur Radio.

There a re no "shows" on Amateur Radio.

A "show" is a program prepared for broadcast for the general
public.

> an Information bulletin is "A message directed only to amateur
> operators consisting solely of subject matter of direct interest to the
> amateur service."

Nice quote.

> The Subject matter I run is on radio, electronics, computers, and radio

> and the FCC you want my programs are legal until you or your little
> #####es at the FCC prove to me otherwise. that's the other difference
> between me and K1MAN....SO go CRY to the FCC you F**king ###hole.

If you'd "x" out the "bitches" and the "###hole", you would really
impessed me...

One step at a time, though, I guess.

One last question, Todd...

Do you think you're any more likely to get your broadband service
back by continuing to use profanity and call the people with their
fingers on the service keys names in a public forum...?!?!

No, facts do not confuse me.

Yes, your illiterate drivvel does.

I did not generate (author) the e mails in question. Even Todd
acknowledges that.

> > > However those letters aside, there's one thing YOU seem to not

> a civil tort comttied by Todd

But I allege he DID commit a crime, Markie.

He facilitated the promulgation of those letters by providing the
resources by which they could be generated and he incited the behaviour
that resulted in it.

Besides...Why write "TOS" rules if you're not going to expect
people to abide by them or provide protection for others with them?

> > Is it your psotition that anyone calling 9-1-1 to report a crime
> >in progress is un-Christian?
>
> GIGO

You didn't answer my question, Markie. It only requires a "yes"
or "no"...Is it YOUR position that people who call 9-1-1 to report a
crime in progress are un-Christian?

> > Are the viewers of "America's Most Wanted" un-Christian?
>
> GIGO

You again refuse to answer a yes/no question.

Is it your position that people who view "America's Most Wanted"
are un-Christian?

> > > > Just like those tapes of my program are fake....then again were

> are the spelling NAZI not I I am simply pointing YOUR Hipocrocy

I'm not a "spelling NAZI", Markie.

I simply am aghast that a person can graduate high school in the
United States with the absolutely horrific English skills you have.

And what is a "Hipocrocy"...?!?!

> > > "Shows" are broadcasting.

> we use langauge any suggestion to contary is plain idoitcy

Markie, you REALLY owe it to yourself to be sure that you KNOW
what you're talking about before you comment on it.

We are not discussing Internet content. We're discussing Todd
illegal broadcasting on the 20 meter band.

> You simply believe YOU are apointed by someone (yourself? or is it the
> FCC? or God prehaps ? or some rice crispies?) to decide wether someone
> is guilty of some wrong doing

I didn't say he's "guilty" of anything, Markie. It's for a judge
or jury to decide. However Todd's starting to rack-up points towards a
"K1MAN Look-Alike" award.

> of.
> > sounds he mean he holds court on the freq, and time, but you

> manner that does suggest he might be doing something wrong, nothing
> else

See what happens when you jump into the middle of an on-going rant
without first taking the time to see who's ranting about what, Markie?

Todd's already admitted to illegal broadcasting on TV and FM
frequencies, and has admitted to operating an aircraft contrary to
Federal Aviation rules and regulations.

Now he's come to RRAP, obstensibly to get approval for or to
advertise the presence of his "shows".

The problem is that NOone cares about his broadcasts. He's simply
using them as a sham for his self-promoting diatribes. Nothing more.

> > > If you're promoting a "show" on an Amateur Radio allocation,

>
> Your Point? sorry I missed it unless you are still to be enpowered to
> decide how people may write

I am not "eMpowered" to do anything but observe and comment.

Your "writing" is a travesty. It's a violet rape of the English
language, to say the least. Todd's a close second.

> > And BTW...you're NOT any "old friend" of Amateur Radio...I rate
> >you only about 2/10ths of a point above Lennie Anderson, but still well

Hope so! But NNJ to NLI may be too close for 20 meters. Will see
how the trap dipole at 70 feet works, though.

June 16, 2005

"I send greetings to those celebrating the annual Field Day for Amateur Radio, hosted by the American Radio Relay League.

"Across our country, radio plays a vital role in relaying important information to the public and emergency service personnel in times of need.

By providing emergency communications at the Federal, State, and local level, licensed amateur radio operators help first responders and law enforcement officials save lives and make our country safer. Your efforts help ensure the right assistance gets to the right people at the right time.

"I appreciate all ham operators who give their time and energy to help make our citizens more secure. Your good work reflects the spirit of America and contributes to a culture of responsibility and citizenship that strengthens our Nation.

"Laura and I send our best wishes."

I was not wrong.

There are no reasons other than those cited.

>) Indeed WHAT "
>
> as I go to say but you missed the point try reading it if you can

Reading YOUR drivvle is the problem, Markie. You're functiaonlly
illiterate and hide behind as many multisyllable words as you can,
whether you used them correctly or not.

> other reason..." ?!?!

Sure you have.

On occassions too numerous to count.

>) That's the epitome of selfish!
>
> No you are the epitome of paranoid

I'm not paranoid at all. But you are still selfish. Your
suggestions, ideas and other "recommendations" for the Amateur Radio
service hinge on nothing more than your inadequacies in it yourself.

That's not justification for ANY change in the Amateur Radio
Service.

No, I consider you to be functionally imparied. Your thought
processes are irrational and scattered. You are unable to organize
your thought in a constructive manner.

In short, your're a quite confused and otherwise situationally
inappropriate pesonality.

> > Besides it would be bigamy i guess you missed my mentioning my marrage

> Sociiopath meeting the textbook meaning it is impossible for 2 guy to
> marry in Illinois simple fact

First of all, it's "sociopath".

Secondly, I didn't say anything about being married "legally"...Gays have been getting "married" for years, except it's called a "civil union". I am sure the two of you could work out the details.

> Further I am certian you are liing in saying those are the only things
> that are impossible that or plain mentaly ill. Or both of course. Which
> is it?

First of all, I said what things >>I<< consider (as in an opinion) to be impossible. Persoanlly, I believe in transwarp space drive, telemolecular transportation, and that Michael Jackson's skin condition really is vitilago (OK...two out of three...) None of those things presently exisit, however they shall some day,

I also KNOW that Mark Morgan, formerly of Illiopolis, IL and late of Chassell, MI, is a pathological liar who disgraces the honor of Veterans living and deceased, and for whom strength of character and honesty are nothng but words in a dictionary.

Does Mr Markie know what a liar you are?

Putz.

Actually I was rather surprised (and pleased) at the response. I've always believed that one issue has been getting an awareness of ham radio to the public. Newspaper articles are fine but they often get skipped over by busy people. So this idea came to mind.

Basically I presented it as an unusual and fun way to send greetings to people that would help the club I belong to both get points in the contest and practice in message handling for emergency preparedness.

I did offer to give anyone interested in visiting, seeing us in action, or even participating a map to the closest Field Day operation to their locations but didn't get any takers on that. But maybe next year. Who knows.

Dee D. Flint, N8UZE

You see any discusion of a posssible change that could be proposed as
an attack where none was made. I have said that there is merit in
Banning morse, as well as AM phone for that matter when I have gone at

greater length support your right (and everyone else's for that
matter) to engage in an activity I consider unproductive even harmful
to the ARS

If my opinion relate in some than I can't deal with morse, maybe you
are even right, doesn't change the fact it is my opinion

So the statement that you don't beleive any else in the world (or would you prefer universe?) is impoosible is plaily a lie. Indeed you have satted something along the line of it is impossible that I have been in the service

I never said anything about your opinion on tranwarps or transmat , and I'll stay well away from anything to do with poorMJ

You are a stalker a Bigot and a disgraceto the uniform you cliam to have worn

A disgrace to medicine

a Lair distroter of context

Hypocrite

Sex Obcessed, (and perhaps sex repressed too)

and likely represed Homosexual

You have many delusions, the biggest of which is that you know much of
anything about me

You have more issues than I, not the least of which is a streak of Joe
McCarthy

Who said anything about rape, you ignorant illiterate idiot?
Thee's not a single word in that post about rape.

You're the filth, Markie.

You've still never apologize for imitating a commissioned officer
of the Armed Forces.

Nor have you ever retracted a single one of the other mistruths
and deceitful dodges that you perpetrated under any one of your
numerous other nomme-de-guerre's.

You generated it. wether you authored it or any part of it I not an
issue I am comenting on. Although given your hisotry it is possible
that you even wrote the letters you objected to and sent them to
yourself though the Blogosphere, but I wasn't comenting on that either

Yep as is my right

>
> Is it your position that people who view "America's Most Wanted"
> are un-Christian?

GIGO

It my position OTOH that people that watch it are very likely fairly
sick people either before hand to watch it or after (as a result of)
watching it very much
>

No we are in a discusion of the use of langauge.

It is legal to a call tranmision a broadcast if you like. you can also
call it a Beamer or wangdoodle if you like. I prefer to use the word
broadcast myself. does not make the tranmission under discusion illegal
if it is called a show or a broadcast. the content of the transmision
does or doesn't do that
>

> Federal Aviation rules and regulations.

Several points

One I doubt he admitted to anythign illegal etc by your disorting his
words though your warped mind

Two planes are an FAA matter not FCC

Three he can to have comitted an illgal here on usenet, that is not a
crime. the only way he can comite a crime by cliaiming to have done
that I think of would be to cliam he took a shot at the president. That
would be a a crime

>

No delusion at all.

You're a functionally illiterate, arrogant chronic liar who has
some pretty twisted social role concepts taht you perceive as "normal".

> You have more issues than I, not the least of which is a streak of Joe
> McCarthy

The LEAST of which has anything to do with Joe McCarthy.

You're a liar (documented) You're deceitful (documented) and you
have some pretty twisited ideas about morality yourself (also
documented).

Steve, K4YZ

"Qualsified"...???

As for upgrading, you'll remember I was caring for a terminally
ill child for years, including the financial obligations that go with
that.

As for "upgrading", I am one of only 12 ALS-PN's in Southeatestern
Tennessee...That's "Advanced Life Support" for you unwashed.

There's only four things I am prohibited from doing as an LPN
unless there's an MD immediately present: (1) Conscious Sedation, (2)
Initiate blood transfusions, (3) Administer certain antithrobolytics,
and (4) act as charge nurse.

We very rarely do conscious sedation in the ER, so it's not a
factor.

We very rarely hang blood in the ER...However even those
limitation on LPN's are waived if there's an MD in in direct attendence
and supervising the transfusion. And guess what...?!?! The ER is
manned 24/7 by a physician. I hang blood weekly.

We often give throbolytics in the ER for CVA and MI's. Same
caveat for thrombolytics as blood products. I hang throbo's all the
time.

And lastly, the extra seventy five cents and hour the charge
nurses get for being charge nurses and all the hassle that goes along
with it isn't worth it.

Nonetheless I am an enrolled RN student.

I'll be an RN before Lennie's a licensee or you learn how to
spell.

Nice try, though.

> > > > > I forwarded those letters to Consolidated. I didn't generate

> yourself though the Blogosphere, but I wasn't comenting on that either

Regardless of how YOU try to redefine it, Markie, I didn't
generate the e-mails in question. Even Todd acknowledges that.

Since you weren't even in the forum at that time, you look pretty
foolish trying to redefine the parameters of an issue you weren't even
party to!

> > > > > However those letters aside, there's one thing YOU seem to not

> > Unto God That Which Is Gods"
>
> Yes and your point?

The point is that there's nothing "un-Christian" about reporting
someone who breaks the law or violates posted rules.

> > > > What does being a Christian or conforming to Christian principles
> > > >have to do with reporting a person breaking the law, Markie?
> > >
> > > You accused him of breaking the TOS not a law no crime was comitted at

> > > a civil tort comttied by Todd
> >
> > But I allege he DID commit a crime, Markie.
>
> What crime

He operated a broadcast trasmitter without a license.

He operated a pirate TV transmitter without a license.

He's presently operating an illegally modified ultralight.

There's more, but those are sufficient.

Spend some of your time on Hotmail doing some researchon your own,
Markie.

> > He facilitated the promulgation of those letters by providing the
> > resources by which they could be generated and he incited the behaviour
> > that resulted in it.
>
> and this is criminal how?

It's criminal to facilitate a criminal act, Markie. Even in
Illinois and Michigan.

> > Besides...Why write "TOS" rules if you're not going to expect
> > people to abide by them or provide protection for others with them?
>
> Good question one worhty of puting to many providers but not on oypic

What in the blue blazes was that?

E N G L I S H, you blithering idiot.

> > > > Is it your psotition that anyone calling 9-1-1 to report a crime

> > crime in progress are un-Christian?
>
> You Noticed?
>
> I responded to you. I did not answer you. I avoid answering rethorical
> drivel as a general rule

It's not rhetorical.

You suggest that it's un-Christian to report violations of rules
or laws. I want to know if you consider those other examples as
un-Christian too.

D o you have valid answer, or was this just Markie imressing
himself?

> > > > Are the viewers of "America's Most Wanted" un-Christian?
> > >
> > > GIGO
> >
> > You again refuse to answer a yes/no question.
>
> Yep as is my right

And it's my right to call you a spineless coward. Seems it's
about right.

> > Is it your position that people who view "America's Most Wanted"
> > are un-Christian?
>
> GIGO
>
> It my position OTOH that people that watch it are very likely fairly
> sick people either before hand to watch it or after (as a result of)
> watching it very much

So...You consider any citizen participation in law enforcement as
un-Christian, and no doubt un-American.

Per America's Most Wanted's statistics, over 800 violent offenders
have been apprehended due to citizen pariticpation.

I again ask you, is it un-Christian for citizens to participate in
maintaining their own security, peace and well being...???

> > I'm not a "spelling NAZI", Markie.
>
> Yes you are

No, I'm not.

I do, however, take great pleasure in making fun of you.

You do, afterall, provide a plethora of opportunites.

> > I simply am aghast that a person can graduate high school in the
> > United States with the absolutely horrific English skills you have.
>
> seond gade now HS means you were lieng when. oh why bother..

WHAT THE HECK WAS THAT...?!?!

"seond gade now HS means you were lieng when. oh why bother.."

Markie, there's not ONE coherent thing there, other than "oh why bother"...and that may be the ONLY thing you've EVER said that makes ANY sense.

THAT is why people can make such fun of you!

And by the way...you insist that you are building a house now. Is that with the money you've saved all these years by not installing a spellchecker?

> > > WRONG the is the internet the FCC lacks any authority to determine how

> > We are not discussing Internet content. We're discussing Todd
> > illegal broadcasting on the 20 meter band.
>
> No we are in a discusion of the use of langauge.

No...YOU are in a discussion about use (abuse, actually) of language.

> It is legal to a call tranmision a broadcast if you like. you can also
> call it a Beamer or wangdoodle if you like. I prefer to use the word
> broadcast myself. does not make the tranmission under discusion illegal
> if it is called a show or a broadcast. the content of the transmision
> does or doesn't do that

In the aforementioned "language", Markie, it has long ago been deemed imperitive to have certain words or phrases that, when used in certain context, have certain meanings. In some colloquial circles it's called a "frame of reference"

For the purpose of FCC applicaitons, hence applying to licensed Amateur Radio operators such as you and Todd, "broadcast" means one-way transmisions.

> > See what happens when you jump into the middle of an on-going rant
> > without first taking the time to see who's ranting about what, Markie?
> >

> > Federal Aviation rules and regulations.
>
> Several points
>
> One I doubt he admitted to anythign illegal etc by your disorting his
> words though your warped mind

Again you demonstrate your ABSOLUTE IGNORANCE, Markie.

Todd has dozens of posts goign back over a decade bragging about
his pirate radio/TV activities.

> Two planes are an FAA matter not FCC

No kidding, Sherlock? That's what I SAID. Allow me to repeat:
"...and has admitted to operating an aircraft contrary to Federal
Aviation rules and regulations..."

> Three he can to have comitted an illgal here on usenet, that is not a
> crime.

Illegal is illegal, Markie.

> the only way he can comite a crime by cliaiming to have done
> that I think of would be to cliam he took a shot at the president. That
> would be a a crime

What? What was that in E N G L I S H Markie...???

> > Now he's come to RRAP, obstensibly to get approval for or to
> > advertise the presence of his "shows".
>
> When did you jion PsiCorps?

What's a "jion"...?!?! How do you "jion" something...?!?!

PsiCorps? Another of your drafted but never released from Active
Duty assignments, Colonel...?!?!

> > The problem is that NOone cares about his broadcasts. He's simply
> > using them as a sham for his self-promoting diatribes. Nothing more.

How can I tell you're agreeing with me or disagreeing when your

And if you were agreeing with me, why "Stevie"..?!?!

On those few occassions where it appeared as though you might act
reasonable, I refer to you as Mark, address you by your callsign and
add a "73" to the post.

You seem to not do that.

> As I said before at least you have drop the Flaso polite 73's from your
> posts

"Flaso"...?!?! Sounds like an Italian or Baltic name. Who's
Flaso?

I had dropped "73" from you a looooooooooooooooooooong time ago.
Not so with others who are civil and mature in their responses.

Source record: 110837

>And for the billionth time, Todd...
>Those letters themselves wouldn't have mattered.
>There was enough LEGITIMATE stuff to "can" you.
>I reported it. Consolidated agreed.

First off dickhead, and for the billionth time as you would say, this isn't YOUR NEWSGROUP!!!! you don't own it, nor are you the moderator, You steve are nothing more then an sadist ham cop who sits on the amateur newsgroups on the internet and watch what people post and then turn around and report it, why??? because you get your nuts off on it. It really sad when a phone company won't listen to a paying customer, but will listen to a mental ill person like yourself.

>Yeah..uh huh...Right...
>Chances are that if people find out WHY you were canned, they'll
>be MORE likely to join Consolidated just becasue they know that
>Consolidated is concerned with keeping trash off the Internet, even if
>it is just one piece at a time.

I know steve you probably live a shelter life, but out here in the "real world" people Do talk like that...here's an Idea don't go to New York City, you'll probably hear stuff that make my post look calm. but it really doubtful that people would go rushing to consolidated, they charge too much ($300-350 for startup fee) and ($36 to $40 a month) and when people hear that consolidated listen to a non-paying customer, who is a sadist, and NOT a paying customer, well...

>What YOU continue to ignore is that those letters weren't the only
>reason you got canned.

and you continue to not to understand that what YOU did was wrong, when there were alternatives, but instead you have proven to ever one on here what I had been saying that your an asshole!!

>No, you're not.
>But then this is a PUBLIC forum and a certain amout of decorum is
>expected (or should be) "MF", "AH", "CS" and other such adjectives
>are NOT language you typically hear walking down the street or walking
>through Wal-Mart, and I don't think it's appropriate here.
>Then when you DIRECTED it at me, well, that cinched it

again you don't have to read my post and let me say you are a hypocite, you have the balls to call me gay when I am not, like I said steve, don't go to New York City, they use those "Adjectives" all the time, I know I've been there a few times. in the "real world" people use those

words and a form of expression, look at rap music....it's not my fault
you live a shelter life.

>Seems to me the "moron" was the customer who thought that
>$36/month was a license to be obnoxious, mistruthful and idiotic with.

No dickhead for $36 a month they should at lease here my side but they
wouldn't hear anything of it.

In this case the @@@hole WAS the customer.

>So far, you've blamed...
>me for being a crybaby...
>Consolidated for actually enforcing their own regulations and
>threats...
>Buzz Corey for, well, who knows why...
>The ONLY person you've NOT blamed is the person responsible for
>your predicament...
>YOU!

and just like you Cornwhore has poroven that he too is a asshole who
had alternatives to reading my post, but just like you he is a sadist
who get's his nut off by acting like a netcop

>There a re no "shows" on Amateur Radio.
>A "show" is a program prepared for broadcast for the general
>public.

first off it depends on who it is directed to, if it's directed just to
amateur's then it legal, my shows like I said is on radio, electronic,
computers and radio regulations, and until you or little buddies at the
FCC say otherwise that it's illegal, by showing me a rule that states
it.

>If you'd "x" out the "bitches" and the "###hole", you would really
>impessed me...
>One step at a time, though, I guess.

I'm sorry steve....I forgot you don't live in the real world....

>Do you think you're any more likely to get your broadband service
>back by continuing to use profanity and call the people with their
>fingers on the service keys names in a public forum...?!?!

oh callign someone gay when they are not, isn't insulting....you
bastard

I'm going to waste my time writing my name or my call simply because
your not worth it.

There's nothing that I can do to stop those letters, the last one that
you posted on here was sent from a different blog.

>Todd's already admitted to illegal broadcasting on TV and FM
>frequencies, and has admitted to operating an aircraft contrary to
>Federal Aviation rules and regulations.

I did run a unlicensed LPTV station....a long time ago, as for FM I
never ran a FM station, but refresh my memory... as for my aircraft,
most ultralight pilots I know run more then just five gallons of
gas...that was one of the problems the sports license was suppose to
fix.

>There's more, but those are sufficient

Really, what other lies are you spreading steve??? and BTW I ran a low power TV transmitter after wasting my time and money applying six times for a license, with waivers which the FCC wouldn't even consider even though the federal court have told them repeatively "you must consider waivers" like I said steve you don't know the whole story nor, were you there..

Todd

3608. K1MAN Demands The Press Explain Why Its Not Reporting His Side

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-24 19:01:40 UTC
From: channel391@juno.com
Message-ID: <1119639700.031315.165540@g49g2000cwa.googlegroups.com>
Source record: 110841
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

K1MAN is justly asking why the ham press has not presented his side of
the story. Please read his editorial response below:

K1MAN EDITORIAL - ED050616 -

WHERE IS THE OTHER SIDE OF THE STORY?

You read what the FCC says about K1MAN. You read about what other
hams say about K1MAN. Where do you read about what K1MAN says?
ARRL? No! QST? No! CQ? No! World Radio! No! K1TP? No!
QRZ? No! What is wrong with this picture, you ignorant hypocrites?
No wonder the Arabs hate our guts so much. No wonder Amateur Radio
is going down the tubes, led by ARRL.

I love both America and Amateur Radio, however. K1MAN will be on for
many many years to come, and the true scum of our precious hobby and
service will be thoroughly exposed in the upcoming court proceedings.
K1MAN has been on the air with IARN information bulletins since 1987,
and the FCC is as powerless to stop them as K1MAN is powerless to
stamp out amateur radio ignorance. Fear not fellow Radio Amateurs.
You have the constitutional right to be stupid! Only in America!

Join the American Amateur Radio Association today! See www.K1MAN.com

It was and remains rhetorical,

You going to answer the one "have you stoped beating your wife yet?"

or the one, "was your daughters Illnes the result of your abusing her?"
>
> You suggest that it's un-Christian to report violations of rules

That is another of your infamous falsehoods and distortions. What I
said was watching the stream of dreck that program and Law and order
CSI etc is either sign of mental illness or likely to cause mental
illness
>
> Per America's Most Wanted's statistics, over 800 violent offenders

Way back when in the mid 70s our ham radio club would
do this for Valentine's day. Invite students who had
girlfriends off campus to have us send messages to them.
Was a way for the ham club to get some exposure and a
way to score some points with the student activities
committee (who doled out the money to the various
clubs of the college). This was before the Internet
being commonly available.

K1MAN SAYS:

FCC ISSUES A $21, 000 NOTICE OF APPARENT LIABILITY AGAINST K1MAN

In a "NAL" released 7 June 2005, the FCC has opened a pandora's box, according to Glenn Baxter, Manager of IARN, the International Amateur Radio Network, and AARA, the American Amateur Radio Association.

Mr. Baxter was recognized by the State of Maine legislature on March 13, 1991 and named as a Vermont Academy Distinguished Alumnus on October 1, 1993 for international amateur radio communications work with his IARN.

Mr. Baxter says that this whole charade is being driven by petty ham jealousy and the blatent incompetence of ARRL in failing over the years to come even close to the work of IARN in emergency communications work.

Mr. Baxter welcomes these court actions since he has been trying to "face off" with the Commission for over 15 years. "Many heads are finally going to roll," acording to Baxter. K1MAN's response is printed below together with the full text of the NAL.

In the matter of
Glenn A. Baxter, P.E.
Registered Professional Engineer

well, lets see. if k1man via channel391 is all concerned about not getting his side of the story out in all those magazines it must mean that he doesn't have enough of an outlet of his own to think he is reaching anyone. where are all his loyal followers? where are all the members of iarn coming out to support him? where is the world wide network of iarn writing to all their powerful friends building support for his case? and where is he? i haven't heard one of his broadcasts in quite a while, its kind of hard to pretend he is a viable source of information these days without the broadcast... and without the print media... and without the friends...

The commission is a very "leaky" organization, and my source
tells me a certain manager is, putting it mildly, furious that the
K1MAN NAL was issued. Look for one or more very quiet
early retirements and/or resignations.

Sort of, I don't see why a person has to continously file applications,
a fee, and waivers if the FCC isn't even going to look at it. I applied
six times for a tv license for a community that dosen't have a local tv
service, each time I sent all that stuff in a week later I would get
all of it back. Then the FCC would go to court against pirate operators
and say "Oh, all this person has to do is apply for license and ask for
a waiver" We I did all that and it got me nowhere so I figured why
apply, after applying six times it pointless, so I ran a "pirate" TV
station

And Novices were required to be crystal controlled, which meant that a Novice might own 1 or 2 crystals, or maybe a rich kid would own 3 crystals. So you first checked to see if the frequency of your crystal was in use, if not then call CQ, three by three, CQ three times, your call three times, and that repeated three times. Then you scanned the band because chances are some other novice answering you would not have the same crystal frequency you did. As Dan says, one learned to dig em' out, and the drifty receivers made it even more challenging.

3629. Petition to Deny Renewal to K1MAN

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-24 21:40:37 UTC
From: policy-ham <hamop_62@hotmail.com>
Message-ID: <1119649237.556139.108330@g43g2000cwa.googlegroups.com>
Source record: 110860
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.scanner,rec.radio.cb

Do any of you know about this on line petition to the fcc
to stop them from renewing the ham license of K1MAN? I found
it on eham.net.

L.L.

Petition to Deny Renewal to K1MAN:
Brian (K3VR) on June 15, 2005

By now, you've probably heard that K1MAN has received a large NAL
(fine) from the FCC, for Broadcasting, Wilful Interference, Lack of
Station Control, Failure to File Required Information, and Pecuniary
Interest.

Even if K1MAN were to pay this NAL, there is no guarantee that his
obnoxious behavior will change. If he were to lose his license, and yet
still continue to transmit, at least the Government could seize his
equipment.

The fact is, K1MAN has received lots of letters from the FCC over the
years and nothing to date has stopped his trashing of Amateur Radio.
For this reason, I believe he should permanently lose his license to
transmit over amateur radio.

As it happens, K1MAN's license is due to expire on October 17th. The
FCC already has a procedure in place where we, and the rest of the
listening public, can make our voices heard regarding K1MAN's license
renewal.

I propose we use the FCC's standard procedures to file what's known as
a "Formal Petition to Deny Renewal." Basically, the petition would be
signed by all of us who believe K1MAN's license should NOT be renewed.

As it happens, there is a website being written right now to accomplish
this task. The "Petition to Deny License Renewal to K1MAN" is in the
process of being written by Keith Lamonica (W7DXX).

Based on K1MAN's on-air behavior, we will ask that the FCC not renew
K1MAN's license this fall. I've already begun collecting comments.

All you need to do is indicate in writing, that you believe K1MAN's
amateur radio licenses should NOT be renewed.

Referencing his NAL letter, send your comments to:

Brian Crow
2550 Mosside Blvd

Suite 212
Monroeville, PA
15146

Include your comment in favor of the petition to deny license renewal to K1MAN, along with your name, callsign, address, signature, and a daytime phone number for verification.

Your comments will be submitted to the FCC along with the petition. Even a postcard with the required information will do it. If you have a lot to say, send me a letter.

Please join me in supporting this Formal Petition to Deny License Renewal to K1MAN. We need YOUR comments!

The website and petition, now in progress of being completed, is located at:

http://www.no2k1man.com/

Thanks for your support!

Oh yes indeed......remember how you could change the frequency of those
FT-243 rocks? Carefully take them apart and apply a thin layer of pencil
lead. Don't remember....did that raise or lower the freq? Another
technique was to drilll a hole in the face of the rock. Put a metal screw

in it and adjust the tension on the quartz via the spring that was inside.

Ah the good ole days.

Yeah right.

Dan/W4NTI

A single person comes to mind.

BTW, Dee and Dan both just informed me that "dipshit" wasn't profanity,
so I think the phrase, "Gunny Dipshit" will be met with overwhelming
approval, unless K8MN corrects me and says it should be "Dipshit Gunny."

Your posting this, and all the things like it, isn't that far from those dispicable posts made about your daughter.

You can apologize to Mark and be a better man.

Remember Meshna surplus had I think 4 Xtals for a buck at 7.150 which, by using some window glass and some toothpaste, one could knock off a few microns and shift the freq up ....only problem is that only 2 of the 4 worked after the grind ..... and that one I think was out of band ....

Definitely a second on the yeah right .....

I don't know about the "petition", but think it is something for the masses (hams) to steer clear of. The FCC will or will not do something and I'm not sure the FCC would appreciate this sort of "feedback". We have already been a bit of a pain in the backside to the FCC and should probably keep involved in "policy" and not individual situations.

I do think it might be nice not to copy in shortwave groups, cb groups, and heaven knows how many other groups you posted to. This is not in the best interest of many of those newsgroups.

Just my two pennies' worth ;)

All "suspended" masses have natural frequencies and harmonics thereof.
Add mass and the freq goes down. Remove mass and the freq goes up.

In these parts us N-Band crawlers lapped our xtal freqs up with Bon-Ami
and lowered 'em by rubbing 'em with sodder. Had pretty good success
rates both ways.

Baxter lives in Massatoosets, or is it Massatoochits? Or in Massa Two Tits?
Any way you cut it, however you spell it, Glenn and his Blabfests are
hopefully going to be a thing of the past.
It will be interesting to see if Baxter will go down with both guns blazing
as he cohosts with arrogant Richard Whiten, ex WB2OTK and fellow jammer by
his side.
That $21,000 fine is sure to put a dent in his coffers, even for a
"professional engineer" of his self-proclaimed high standing.
Hey, Glenn. Ever entertain the idea of initiating a legal defense fund? I'll
donate two cents.

I always get a laugh from people like you who HIDE behind the
American's with Disabilities Act calling others "lazy".

> > You've not done that yet.
> >
> Nope and I am NOT carring your freight.

I doubt you have a car of any signifigance to carry any freight
in, Markie.

You keep trying to impose arbitrary religious content here,
Markie. Why?

> > And if you were agreeing with me, why "Stevie"..?!?!
>
> becuase I felt like it. You never use my name politely

I used to.

Then you started following Lennie's lead with "Stevie" and calling
me a "lier" when the facts are clear that YOU are the one who's wrong.

Stop lying and start calling me "Steve" and I will reciprocate by
calling you "Mark".

> > On those few occassions where it appeared as though you might act

What? Huh? Stoped? What's a "false coutesy"...???

You meant "false courtesy"...?!?! If I said it, it wasn't false.

> > You seem to not do that.
>
> No I don't. What was your first clue?

Anything you write south of "KONSTANS". Pretty much a sure bet
that there's falshoods or other misrepresentations to follow from there
on down...

Brain, you've NOT been paying attention...A G A I N ! ! !

You said "Why do (I) do such thingS?" (emphasis mine on the plural)

I answered your question directly and honestly.

You, Mark and Lennie all provide more than adequate opportunites to
have fun. You lie more than a cheap Persian rug, get caught up in your
own tales, and ultimately wind up cussing and throwning tantrums.

> > > You're an idiot.
> >

It's a LOOOOOOOOOOOOOOOOOOOOOOOOOOOOOOOONG way from desecrating the
memory of ANY deceased person, Brain.

Taelor never had the opportunity to fend for herself.

You, Mark and Lennie...well...

> You can apologize to Mark and be a better man.

Apologize for what, Brain?

You're always about "apologizing", yet there's years of YOUR
mistruths, deceit and outright fabrications out there that you've shown
absolutely NO interest in making amends for...
```

SO where do YOU get off suggesting others apologize for ANYthing?

Steve, K4YZ

It is impossible that you've been in the service.

You've even acknowledged that you lied about it.

There's nothing left for me to do but laugh at you for it.

> I never said anything about your opinion on tranwarps or transmat , and
> I'll stay well away from anything to do with poorMJ

You missed the point again. And why can't you get the subjects
right even when they are right in front of you to copy from, Mark??

> You are a stalker a Bigot and a disgraceto the uniform you cliam to
> have worn

You're a liar, a liar and a liar.

(1) If I was a "stalker", you'd never know it.

(2) If I was a bigot, you'd be hanging from a tree.

(3) If I was a disgrace to the uniform of ANY organization I've
ever been in, then I'd not have the restraint and professionalism to
keep from doing items 1 and 2

> A disgrace to medicine

Gee..that's strange...I'm one of only 12 LPN's within 100 miles of
here who can do the things I do...

> a Lair distroter of context

Huh? A what?

> Hypocrite

Ahhhhhhhhhhhhhhhhhhhhhhhh...That's cute. You first lie about being
a Field Grade Army officer, then lie about being a Company Grade Army
officer, then lie about haivng ever served...Then you have the temerity
to call others who DID serve "a disgrace" even though you didn't know
them when they served...But you have the cajones to call THEM
"hypocites".............?!?!?!?!

> Sex Obcessed, (and perhaps sex repressed too)

You mean "obscessed"..?!?! Hardly.

> and likely represed Homosexual

Nope. Nice try at diversion, Mark!

> > Does Mr Markie know what a liar you are?
>
> Auf anglish bitte?

Geeze, Mark, you even abuse the German language.

ROGER WISEMAN'S GREYHOUND MEN'S ROOM BAND

Lead vocal: Dr. Winston O'Boogie

It was twenty years ago today,
Roger Wiseman forced the boys to be gay
He's been going in and outa their rears
And he's made them into ravin' queers.
So watch out or I'll force on you
The act we've hated all these years,
Roger Wiseman's Greyhound Men's Room Band.

We're Roger Wiseman's Greyhound Men's Room Band,
Disciples of the Bucktoothed Choad,
Roger Wiseman's Greyhound Men's Room Band,
Sit back and watch us shoot a load.
Roger Wiseman's Greyhound, Roger Wiseman's Greyhound,
Roger Wiseman's Greyhound Men's Room Band.
It's wonderful to be here,
But Wiseman's full of crap,
The dirty goddamn pederast:
That fucker gave us syphilis,
That fucker gave us clap.

I don't really want to stop the show,
But I thought you had all better know,
That Wiseman's going to play a song,
On a stickpin that he stuck through his schlong.
So let me introduce to you
The one and only Bucktoothed Choad
And Roger Wiseman's Greyhound Men's Room Band.

There's always a change.

I just dont' change where tolerating liars and deceivers comes in.

(That would be you, Lennie and Mark, byt the way.....)

> You are to be pittied.

By who?

You...?!?!

Riiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiight.

Steve, K4YZ

Nope. Because Bob Hope never did it to be deceitful and evasive.

Markie did. Markie knowingly misrepresented himself as a
Commissioned Officer of the Armed Forces for personal gain or intent.

That's a felony.

Steve,K4YZ

Just an easy and familiar habit to drop back into, isn't it, Todd?

> (UNSNIP)...and for the billionth time as you would say...(SNIP)

Such as when...?!?!

> this isn't YOUR NEWSGROUP!!!!

No kidding, eh?

Where did I say it was?

> you don't own it, nor are you the moderator,

Was that a sentence? Was there a point?

> You steve are nothing more then an sadist ham cop who sits on the
> amateur newsgroups on the internet and watch what people post and then
> turn around and report it, why???

No, Todd....

I "reported" specific things you did and said TO ME.

> because you get your nuts off on it.

No, I don't.

> It really sad when a phone company won't listen to a paying customer,
> but will listen to a mental ill person like yourself.

Still not accepting responsibility for your own behaviour,
Todd...?!?!

You'll NEVER get past this until you realize that YOUR mouth and
YOUR behaviour.

Consolidated saw exactly the same stuff you and I did.

They acted on it.

They told you to stay away.

You didn't do it.

YOU lost YOUR broadband....Not me...

> >Yeah..uh huh...Right...
> >Chances are that if people find out WHY you were canned, they'll

>
> I know steve you probably live a shelter life, but out here in the
> "real world" people Do talk like that...(SNIP)

No, Todd, people do NOT, as a matter of routine life, talk "like
that".

Yes...they do it in porno's, some "action" movies, and rap music
videos.

Educated, responsible adults do NOT talk like that in public.

> here's an Idea don't go to New
> York City, you'll probably hear stuff that make my post look calm.

I've been to New York City. And Miami. And Los Angeles. And
Dallas, Atlanta, Nashville, etc etc etc.

People don't carry on like that as a matter of "real life"
conversations in public.

> but
> it really doubtful that people would go rushing to consolidated, they
> charge too much ($300-350 for startup fee) and ($36 to $40 a month) and
> when people hear that consolidated listen to a non-paying customer, who
> is a sadist, and NOT a paying customer, well...

Problem is that your scenario is wrong.

I am not a sadist.

But you ARE a liar, a cheat, a lawbreaker and deadbeat.

Let's get into a side by side debate over Consolidated's practices
and see who carries the day, eh, Todd...?!?!

> >What YOU continue to ignore is that those letters weren't the only
> >reason you got canned.
>
> and you continue to not to understand that what YOU did was wrong, when
> there were alternatives, but instead you have proven to ever one on
> here what I had been saying that your an ###hole!!

And YOU keep ignoring the fact that I DID those things, including
trying to get you to stop the offensive language and do something to

control your blog posters.

You refused.

Nothing I did was wrong, illegal or immoral.

That YOU don't LIKE it is another story.

> >No, you're not.
> >But then this is a PUBLIC forum and a certain amout of decorum is
> >expected (or should be) "MF", "AH", "CS" and other such adjectives

> you have the balls to call me gay when I am not...(SNIP)

Then prove it.

> like I said steve,
> don't go to New York City, they use those "Adjectives" all the time...(SNIP)

Not in public. Not in schools, museums, theaters or other public
venues.

And people who make it a point of being offensive get hauled away.

> I know I've been there a few times. in the "real world" people use those
> words and a form of expression, look at rap music....it's not my fault
> you live a shelter life.

I don't live a sheltered life. (Coming from an almost-40 year old
deadbeat sponging off of mom and dad, that was cute, Todd!)

I don't listen to rap music for that very reason.

> >Seems to me the "moron" was the customer who thought that
> >$36/month was a license to be obnoxious, mistruthful and idiotic with.

That is an absolute, baldfaced lie, Markie!

I have NEVER ONCE "insist(ed)" that ANY person is any more worthy
or less worthy based on Amateur Radio class.

I DARE YOU to find a quote, Markie!

What I HAVE said is that people who whine about "I can't do it"
are JUST THAT...whiners.

> > Nonetheless I am an enrolled RN student.
>
> Still you have been doing this for years? 7 or 8 as I Understand it. My

> It is Spelling Nazi

It's got little to do with spelling, Markie..

Heck, if you'd just get the phonetics right and make some more
coherent sentences, you might be a bit more effective. (Like THAT will
happen.....)

> > > > I did not generate (author) the e mails in question. Even Todd

> > party to!
>
> You know this How? You Know I wasn't lurking

Well then, Markie, if you are now admitting you were lurking and
STILL don't know what's going on, that makes you look even MORE stupid
than a post-ago.

As if THAT were possible.....

> I simply see things differently than you, something that isn't hard

Congratulations. A coherent sentence.

Yes, we see things differently.

And the BIG difference is that I can more effectively express my
thoughts on those differences because I am NOT functionally illiterate.

> > > > > > > However those letters aside, there's one thing YOU seem to not

> it is not a crime to insult you

There's not been any stalking.

There's not been any threats.

There HAVE been you and Brian Burke quoting out of context, but if
there WAS a VALID threat, AOL could have dropped me.

No Valid Threat = No TOS violation.

> > > > Besides...Why write "TOS" rules if you're not going to expect

How can I tell you're "agreeing", Mark...?!?!

What's an "oypic"...

> > E N G L I S H, you blithering idiot.
> >

But 50% or MORE of your posts are typos put into disjointed,
rambling sentences.

I never started, Markie. Striking women who aren't gloved up in a
boxing ring is the epitome of vile.

> or the one, "was your daughters Illnes the result of your abusing her?"

Nope. It was the result of her mother being exposed to a
cropduster early in the first trimester of the pregnancy.

Why do you ask?

> > You suggest that it's un-Christian to report violations of rules
> > or laws. I want to know if you consider those other examples as
> > un-Christian too.

>
> You want many things. Learn to live with dissapointment is my best

Oh, I do.

I keep hoping-against-hope that you'll get a spellchecker and take
a remedial English Composition course.

> > D o you have valid answer, or was this just Markie imressing
> > himself?
>
> No I don't since their can no valid answer to an invalid question

There IS a valid answer.

You either do or do not consider it to be "un-Christian" to report
crime.

Which is it?

> > > > > > Are the viewers of "America's Most Wanted" un-Christian?
> > > > > >
> > > > > > GIGO
> > > > >
> > > > > You again refuse to answer a yes/no question.

>
> so much for your claims about decorum

Nope. Just making a point you can seem to understand.

> > > > > Is it your position that people who view "America's Most Wanted"
> > > > > are un-Christian?
> > > >
> > > > GIGO
> > > >

> > >
> > > So...You consider any citizen participation in law enforcement as
> > > un-Christian, and no doubt un-American.
>
> That is another of your infamous falsehoods and distortions.

No, it's not.

In three replies YOU have stated that it's un-Christian to do those
things.

Nothing false in what I said, and nothing distorted about it.

It was YOUR suggestion.

> What I
> said was watching the stream of dreck that program and Law and order
> CSI etc is either sign of mental illness or likely to cause mental
> illness

No one, least of all me, said ANYTHING about fictionalized TV
shows.

I asked you about the FACTUAL show "America's Most Wanted".

Nothing else.

> > Per America's Most Wanted's statistics, over 800 violent offenders
> > have been apprehended due to citizen pariticpation.
>
> So what?

So what indeed, Illiterate One.

Those are 800 people who will NOT have the likelyhood of involving
YOU in one of thier crimes.

> GIGO

AMW is garbage?

There's a lot of folks out there who are very glad for it.

> when you take something distort it into somthing atrue facts becomes
> simply garbage

What's distorted?

What garbage?

You claim reporting illegal or inappropriate activity is
"un-Christian".

I've given you several examples of what YOU would call
"un-Christian" and asked you if those thigs would BE "un-Christian".

You refuse to answer.

Why?

> > I again ask you, is it un-Christian for citizens to participate in
> > maintaining their own security, peace and well being...???
>
> have you stop beating your wife yet?

Why do you ignore a valid question with such a childish diversion?

> > > > I'm not a "spelling NAZI", Markie.
> > >

> > > Yes you are
> >
> > No, I'm not.
>
> you are always have been and going out on a limb always will be

What?

> > I do, however, take great pleasure in making fun of you.
>
> Then of course you are a sadistic and by your coments on the subject
> sick and twisted

Hardly.

This post/reply is just typical.

Fully half of your stuff is typo'd.

You don't write complete sentences with even margianlly correct
punctuation.

I've asked you several very direct questions to determine what YOU
consider "Christian" or "un-Christian", and your only "reply" is "GIGO"
or the sandlot "Have you stopped beating your wife yet" stuff.

You make it reeeeeeeeeeeeeeeeeeeeeeeal hard for anyone to NOT
understand why I find you such an idiot.

> > You do, afterall, provide a plethora of opportunites.
> >
> > > > I simply am aghast that a person can graduate high school in the

> > ANY sense.
>
> That is another lie Even you yourself complimented me on a letter to
> CQ on the remark in the VHF collum on code testing. Therefore your
> statement is lie

What lie?

That "sentence" was nothing more than "Scrabble" tiles tossed
across the table, Mark!

"seond gade no HS means you were lieng when"....?!?!

Does that REALLY mean something, or were you just slamming the
keyboard around a bit?

> > THAT is why people can make such fun of you!
> >
> > And by the way...you insist that you are building a house now. Is
> > that with the money you've saved all these years by not installing a
> > spellchecker?
>
> GIGO

No...

With a spellchecker it's GIOC: Garbage In, Options Considered

The problem is you won't use one.

You're like one idiot that comes to the ER all the time with clap
and syphllis...He keeps going to cheap hookers and winds up with
predictable results...He doesn't use HIS protection...

YOUR protection would be a spellchecker...

But then I guess it would be useless to you anyway, since it's
doubtful that you'd understand your error or be able to fix it if you
did.

> > > > > WRONG the is the internet the FCC lacks any authority to determine how

> > language.
>
> if true then you you are ling in claiming we are engaged in a discusion
> of ..20 m
> since I am part of we we are not discussing 20 m

No...YOU'RE not talking about 20 meters because you jumped into
this exchange without nowing what was going on...

You picked up on a couple of words and made a "reply" based upon a
completely non-contextual word or phrase.

> > > It is legal to a call tranmision a broadcast if you like. you can also
> > > call it a Beamer or wangdoodle if you like. I prefer to use the word

Anyone who starts a new thread titled:

"WARNING! GAY PAGAN DRAFTEE IDIOT BACK IN TOWN! KB9RQZ and N9OGL to WED..?!?!"

is to be pittied.

Whatever gave you the idea that Tod and Mark might wed?

Why do you continue with your gay inuendos?

Why don't you seek help?

3683. K1MAN

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-25 22:29:09 UTC

Message-ID: <1119738549.767548.163900@g47g2000cwa.googlegroups.com>
Source record: 110966

K1MAN PT2
FROM http://n9oglvice.blogspot.com

[13. Section 97.101(d) of the Rules states that ``[n]o amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication or signal.''12 On November 27, 2004, December 8, 2004, and March 31, 2005, Baxter's Amateur station K1MAN commenced transmitting on top of existing communications on 3.890 MHz in apparent willful and repeated violation of 97.101(d) of the Commission's rules.]

OH, and the ARRL W1AW don't?? I don't see amateurs bitch and cry about W1AW, nor, do I see the FCC sending warning letters to them. Hey, interfernce is interfernce, and it doesn't matter who's causing it the rules should apply to all.

[14. Section 97.113(a)(3) of the Rules prohibits an Amateur station from transmitting any communications in which the station licensee or control operator has a pecuniary interest. On November 25, 2004 and March 30, 2005, Mr. Baxter's station repeatedly transmitted references to his website, which offers various products for sale, including a monthly newsletter published by Glenn Baxter and offered for sale for forty-five dollars per year. In addition, on December 1, 2004, Station K1MAN transmitted a seventy-minute interview with a person who was considering whether to retain Baxter Associates, an employment-search firm owned by Mr. Baxter. During the transmission, Mr. Baxter discussed fees, investments, and franchising opportunities. We find that Mr. Baxter apparently willfully and repeatedly violated Section 97.113(a)(3) of the Rules on each of these occasions by transmitting communications regarding matters in which he has a pecuniary interest.]

Oh, the ARRL doesn't do that??? the rule states that pecuniary interest applies to direct and indirect. K1MAN is doing direct, while the ARRL doesn't indirect.

[16. Section 97.113(b) of the Rules prohibits, with limited exceptions not applicable here, an Amateur station from engaging in any form of broadcasting or transmitting one-way transmissions. Section 97.3(a)(10) of the Rules defines broadcasting as ``transmissions intended for reception by the general public.'' 14 We find that the pre-recorded seventy-minute interview with a person interested in

retaining Baxter Associates, during which there was no
station identification, constitutes a ``broadcast'' and an
impermissible one-way transmission. Therefore, Mr. Baxter
apparently willfully violated Section 97.113(b) of the
Rules.]

and the question I have for the FCC is where does this and how does it apply to section 326 of the communication act. after all isn't it up to the station to deiced what is of intrest to amateur radio??

finally I would like to tell all my fans that this sick joke of a NAL does not effect my station or the N9OGL SHOW

TODD N9OGL
THE N9OGL SHOW
14.321.00 MHz

Well, I ain't you... :-)

FWITW, I'm waiting for a response from Steven Spielberg on the
sequel to "AI." Maybe he will include us AIs in the newsgroup?

Joel Haley Osment (or whatever his name) can be the 13 year old
kid going for his ham radio license and then encountering all
us mean old AI robots who don't give him no respect.

3694. Is Interpol helping track down Woger posts?

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-26 03:45:49 UTC
From: Stagger Lee <SLee@houston-hunks.com>
Message-ID: <woger.he.be.punked@houston-hunks.com>
Source record: 110977
Cross-posted to: alt.flame,alt.radio.scanner.flame_fest,rec.radio.amateur.policy

A number of anonymous remailers have been bugged by local police, and their computers have been compromised. Several of them are frequently used by Secwet Woger, so it would now appear that his deniability has been blown out of the water.

One example: The Paranoia Anonymous Remailer. Here's part of what their web page says:

==(begin quote)==
Paranoia remailer, nymph nym server and paranion mixminion node have been SHUT DOWN

14-6-2004: We suspect that all content of hard-disks of the server where the paranoia remailer and the nymph nym server run has been aquired by local police without any notification to the server admins, with the collaboration of the ISP provider, so all the keys has to be considered compromised.

We have been noticed only today (21-6-2005) :-(
==(end quote)==

To add insult to injury, it appears that the Italian police have been monitoring all posts going through that remailer for over a year. And that's just one remailer. See http://www.autistici.org/ai/crackdown/.

There are several others which have been compromised, and it appears that using those machines wasn't very safe after all.

Woger has been punked.

Then why don't you direct your question TO the FCC, rather than
spinning your wheels in here?

Scared of the answer you'll get?

> after all isn't it up to
> the station to deiced what is of intrest to amateur radio??

I think the FAA is responsible for getting deiced.

But you again continue to insist that just because YOU think it's
pertinent, the FCC might not have other ideas.

> finally I would like to tell all my fans that this sick joke of a NAL
> does not effect my station or the N9OGL SHOW.

Only you would think it's a "sick joke".

The FCC doesn't issue "sick jokes".

And I look forward with glee to the day we see YOUR name on one of
these...Better hurry up and get that college degree, Todd! You'll be
needing the extra income!

Brian, I'm interested in ALL radio, not just the amateur stuff.

I didn't join the "church" to Believe solely what some
new englanders were preaching about many years ago (and
still doing today). Neither did I NEED some "callsign" to
show some "dedication" or "committment" to the "community."

Apparently the actuarial tables ARE starting to manifest
themselves, as witness some numbers at www.hamdata.com of
26 June 2005:

In the last 12 months, there have been 16,125 new licenses
granted in U.S. amateur radio. In that same time period,
19,332 have dropped out ("no longer licensed"). That's
roughly a 0.4 percent DECLINE per year (-3,207 licensees in
one year) and agrees with the previous year's DECLINE of
6,969 licensees as of the same date two years ago.

The percentage of total Technician and Technician Plus
individual licensees is 48.43 percent of ALL individual
licenses (less the "club" calls). Technician class
individual license percentage is 40.72 percent of ALL
individual licensees.

Technicians are restricted to amateur bands above 30 MHz.
For this national Field Day CONTEST, they won't be making any
big scores via VHF and above. Field Day is primarily the
same old HF CONTEST it always was. HF, with all the "skip"

and ionospheric help on distance it always had. Nothing has really changed with Field Day in a half century. That includes the hypocrisy of stating that Field Day is "primarily about emergency communications" (by the league) when the blatant truth has it all concerned with CONTESTING. Old paradigm. Old hypocrisy. Perpetuated delusion.

Field Day is a CONTEST. Always was. Why not SAY SO up front? Nothing wrong with fun, a weekend in the park, etc.

It's another example of the delusional fantasies perpetuated by the olde-fahrts...which lots more newcomers are NOT going along with...any more than the fantasy that radiotelegraphy "is a 'basic skill' that all 'must' learn." Nonsense.

LenAnderson@ieee.org

> making you squirm and dance.

Except I do neither.

> Unless you are saying that you actually understand that you are > being abused intentionally by others.

Hmmmm...so you consider the way Len treats me to be abuse.

Now we're making progress.

What do you suggest?

> And have done so since 2003. And if
> so....you continue to post the same "wrong, wrong, wrong"
> garbage

Why is what I wrote "garbage", Leo? Len posts things which are provably untrue in a public debate forum. I point out those things and you call my doing so "garbage" - why?

> here
> - knowing full well that you will continue to be abused for the
> pleasure of others.

What do you suggest I do instead?

> Does that seem like particularly sane bahaviour to you?
>

> >*You* don't care. Maybe Len doesn't care. You don't speak for
> >everybody.
>
> Of course I don't speak for everybody.

But you used the phrase "Nobody....cares that you think that he is
'wrong'".

If even one other person cares, your statement is false.

And unlike the soft sciences, the errors I point out are
provable.

> Nor do you, although you seem
> to envision yourself as on some sort of a crusade to defend the
> 'truth'.

Do you think truth si subjective or objective?

I'm simply pointing out that if someone wants to disguise the point of
origin of an email or NG posting, it's very easy to do. Doesn't take
lots of skills or knowledge, just access to a remote computer.

An even better way to setup anonymity is with mail2news and a remailer,
it takes a bit more knowledge and work but is worth it in the long run.
A google should supply one with all necessary details and tools.

John

how do you mean?

why are you so threatened?

I mean you have been stalking me and my family.

You did make a personal website to track the spyware you went to the
trouble of putting on my computer.

You did try to blackmail me off of alt.support.autism

You did commit id theft.

I'm not the one makeing them mad.

You are.

You and your stalking activities...

>Then why don't you direct your question TO the FCC, rather than
>spinning your wheels in here?

The problem is that many amateur radio operators don't realize that there are rules that are outside Part 97 that effects amateur radio. Section 326 is one of them.

Sec. 326. Censorship

Nothing in this chapter shall be understood or construed to give the
Commission the power of censorship over the radio communications or signals transmitted by any radio station, and no regulation or condition
shall be promulgated or fixed by the Commission which shall interfere with the right of free speech by means of radio communication.

(June 19, 1934, ch. 652, title III, Sec. 326, 48 Stat. 1091; June 25, 1948, ch. 645, Sec. 21, 62 Stat. 862.)

Amendments

1948--Act June 25, 1948, repealed last sentence relating to use of indecent language. See section 1464 of Title 18, Crimes and Criminal Procedure.

>But you again continue to insist that just because YOU think it's
>pertinent, the FCC might not have other ideas.

The FCC just cannot change the rules without a public notice, no matter if you like it or not it has always been up to the control operator to decied what is transmitted over his station, no some moron recieving station. if you think that then you are thinking of broadcast stations.

> And I look forward with glee to the day we see YOUR name on one of
>these...Better hurry up and get that college degree, Todd! You'll be
>needing the extra income!

doubtful, my station is legal, I don't interfere, I don't have any pencuniary Interest, and my programming deals with amateur radio issues (radio, electronic, rules and regulations, and computers).

Nope. as I a said before I am not gay (not that there would anything
wrong with it if i were but happens to be untrue) I am bisexaul. I
don't know or care If Todd if gay Str8, Bi or Trans or any other
varriant. I am unlikely to meet to meet Todd, but none of that has any
to to do with Radio

The difference is Baxter does it in a intentional manner. He has said on
his 24/7 broadcasts that he does not bother to listen on his intended
frequency of operation. Because we all should "know" he is coming on there.

The W1AW information bulletins are well published, as per FCC rules,
Baxter has a few paragraphs on an obscure web page.

W1AW is a real organization. K1MAN is a one man pony show.

etc.

> [14. Section 97.113(a)(3) of the Rules prohibits an Amateur

Nope you go off the rails at "..for personal gain.." I, even you may
say or claim anything if it well serve to enhance his personal safety
or that of other. I or even you may even use deadly force. The comment
diverted you you even (if you are to be belived stopped to call the

Pentagon)til I could return home and be better able to defend my family. You keep forgeting that YOU said "One shoot One kill even in Illiopolis" Indeed at the moment you made that threat had you carried it out the man you would have killed would have been my elderly father or the temporay caregiver I hired while I was away on busness
>
> That's a felony.

Indeed your threats are the felony, but Law enforcement has grown to lazy to do the job of dealing with trash like you.

Youa re clearly a stalker likely a relitively harmless one, but you stalk various people including myself, indeed given the interstate nature of your crime a federal offence, but perhaps you take comfort in the knowledge that you are not a bigg enough fish to be worthfrying for your crimes (metaphoricaly speacking of course)

personaly I set out to set the local club record for 6 m contacts. A task I thought would be easy since no one could rememer any 6m contacts on FD in the histroy of the club. While I did suceed in my mission and therefore set a new and dualting goal for next year (5 is the new goal) I am still chasing the satic out of my ears, and I thanks the goods for the time when the clubs generator ran out of gas, and the noise droped to something bareable, breifly

but neither does W1AW, I've heard amateurs complaining about W1AW
transmitting ontop of them. It really shouldn't matter if they
transmitting 24/7 or for 15 min, interfernce is interfernce on any
level.

> The W1AW information bulletins are well published, as per FCC rules,
> Baxter has a few paragraphs on an obscure web page.
>

First off Information bulletins do not have to be published, only if
they are on a certain amount of time which is 48 hr a week for the
purpose of compesation. As for baxter's website I will admit that a
five year old could do a better job making a website, then what he did.

> W1AW is a real organization. K1MAN is a one man pony show.

A information bulletin is NOT limited to clubs, anyone can run an
Information Bulletin

No but the rules state a station can't make money direct or indirect.
K1MAN does do it DIRECT, while the ARRL is doing it INDIRECT. but the
rules does state a station can't make money direct or indirect.

>

Under the FCC rules it states it is up to station transmitting the
bulletin, the FCC even states that on their website. If you don't want
to hear him then that's what a VFO is for.
>

> have a mental problem.
>
It is a sick Joke in the sense that one of the Issues in the NAL was
overturned once already by the Commission in DC back in 2004. (it dealt
with the content of his station)as for the other stuff I don't think
really think it's sick but it does raise some questions. You have to
remeber this was a district office that sent the NAL, and it's not a
FINAL ORDER, there is a Looooooong process before the final ruling is
set, including a hearing before an Administrative Law Jugde (ALJ) and
if he don't like that ruling he can go to the US Court of Appeal and
then just maybe, if they want to hear it the Supreme Court When the FCC
goes around controling the content of the station that is transmitting
it then it is a violation of Section 326 of the Comunication Act of
1934 as Amended.

Glenn A. Baxter, P.E., K1MAM, (or as his parter and buddy Chris Murdoch, WA1HOD, calld him - K1MAN-kind) has a long long history with the FCC. For those of you just joining the debate, here is some information that might help explain why so many hams are eager to sign the Petition to Deny License Renewal to K1MAN at www.no2k1man.com

K1MAN, by his own actions, has made himself a very public figure. As a public figure, he's been widely discussed by his fellow hams here, on QRZ, and elsewhere on the internet, on amateur radio, in court rooms, discussed by his employers, his neighbors, discussed by the FCC, at

CBS, and by the Department of Justice.

In reviewing the history of K1MAN and his qualifications to remain a Commission licensee, we can go back many years, to May of 1986, when he sued the advertising manager of QST and another employee of ARRL for conspiring to damage his business reputation.

QST had received a complaint that showed that Baxter's Collins Repair and Alignment Service had significantly overcharged a customer beyond an amount they had previously agreed upon.

The advertising manager at the time wrote Baxter on QST letterhead, saying, "When your service charges escalate from $75 to $225 and then to $275 we become very much concerned about the manner in which you are treating our members. You will recall that I discussed with you ... the highly suspect illegal spending of deposits which members were sending to you... unless you can convince me that your operation exists in the best interests of our members, we shall be unable to carry further advertising from you."

This exchange and the subsequent lawsuit by Baxter (dismissed) may help to explain why Baxter has attacked the ARRL and its staff with such zeal over the years. He says he wants to make IARN an "Alternative to ARRL" but, discerning readers may recognize another agenda.

Some old timers may recall Baxter's lawsuit against the FCC to maintain the old AM power output of 1,000 watts. That lawsuit was dismissed because Baxter failed to exhaust administrative remedies through the FCC before bringing suit. As the old adage goes, it appears there really is a drawback to acting as your own attorney.

You may also recall Baxter's 10 million dollar lawsuit against the FCC? He claimed he was defamed by the alleged suggestion by Riley Hollingsworth that he was shut down by the FCC. Baxter reported at the time that he had merely taken a break to teach high school. This case was also dismissed because Baxter failed to exhaust his administrative remedies before bringing suit. Baxter has threatened to sue Riley personally, as well as other hams, including this writer. A threat that has yet to materialize.

On January 23, 2003, Walter Cronkite's attorney wrote to Baxter asking him to stop using Walter's voice ID over K1MAN's bulletin. "Mr. Cronkite previously requested that you refrain from any further use of the audiotape, or from any suggestion that he endorses your station, Association, or other operations." He (Ronald S. Konecky) went on to call Baxter's actions "a violation of Mr. Cronkite's rights, totally improper, and a cause of serious damage to his name and reputation."

Baxter's actions, have not endeared him to CBS, The Maine Department of Justice, Walter Cronkite, the FCC, or the countless hams who have complained about Baxter's relentless interference to their ongoing communications.

When Baxter began to send out his self-styled notices of Felony Affidavit Complaints to those he perceived as interfering with his bulletin service, it really hit the fan.

On January 5th, 1995, Jay McCloskey, the U.S. Attorney at the Maine Department of Justice wrote to Baxter, telling him, "It is against the law to write and mail this type of threatening communication, especially when it has no basis in fact. If you continue sending this type of letter, you may be subject to Federal criminal charges for misrepresentation and for using the mails to make threats. You may also jeopardize your amateur radio license; the FCC can use evidence of this type of conduct to demonstrate that you no longer meet the character requirements for a license."

Baxter responded to this letter on January 9, 1995 by writing to the Assistant US Attorney, stating, "Your blatant and malicious abuse of the power vested in you by the citizens of the United States is despicable, unethical, criminal and unprofessional." Baxter went on to demand a retraction, which, of course, he never received.

Baxter has hardly endeared himself politically to the members of the Maine Department of Justice, but the lack of political goodwill doesn't stop there. On January 23, 1995, FCC Counsel John Greenspan wrote to Baxter regarding an insulting letter he wrote to the Assistant US Attorney, "Your reply suggests to me that you may very well lack the character qualifications to be an FCC licensee. You certainly lack the maturity, but that is, unfortunately, not grounds for revocation. If it is ultimately determined that you have made improper threats, that determination could result in a hearing to examine your fitness to remain an FCC license and/or criminal prosecution."

John Greenspan went on to add, "Although you have not used lawyers in the past, I suggest that you consult with an attorney knowledgeable in FCC procedures about your alleged conduct. To provide some incentive for you to do this, let me say that if you wish to speak with me for any reason, it must be through an attorney. I will not accept any calls or letters from you personally."

Not exactly a love letter is it?

Over the past 5 years Baxter has been contacted by the FCC on numerous occasions and his station has been inspected by the FCC. Baxter says he has received FOUR (4) NAL's to date. The FCC has writtent to him about allegations of broadcasting, deliberate interference, failure to identify, poor signal quality, erratic starting and stopping times, recording conversations without permission, and the list goes on...

Even Baxter's neighbors are not immune from his tendency toward trying to use the courts to settle what some might consider silly disputes that would be better handled by a personal phone call. More often than not, Baxter has lost in the courts due to procedural defects in his lawsuits. He is not, contrary to a popular myth, fabulously wealthy, or a lawyer.

According to staff at the IRS, his IARN charity did not even make enough money to require that he file taxes last year. An underfunded organization like IARN that engages in irresponsible activities like calling for jump teams to visit disaster areas who don't even request assistance, does not seem to me, to be an alternative to the ARRL, except perhaps in the mind of Mr. Baxter.

On May 4, 1983, Baxter sued a neighbor of his, Camp Runoia, a camp for little girls, because they stacked cordwood on the side of the road. The case was dismissed. The camp had removed the wood prior to the case being heard.

Baxter's other neighbors have apparently also had reason for concern regarding his allegedly threatening behavior. According to reports gleaned from court records in December of 2003, Baxter was dismissed from his job (fired) as station engineer for FM 95.3 in Augusta, Maine. When he applied for unemployment compensation, the attorney for the station advised his clients not to attend the unemployment hearing.

"Because Mr. Baxter has demonstrated offensive behavior similar to that which prompted his termination, I have advised the Bouchards not to attend Monday's hearing. I indicated to you in our conversation that the Bouchards' fear for their safety as a result of Mr. Baxter's threatening behavior. Mr. Bouchard terminated Mr. Baxter from employment when Mr. Baxter repeatedly acted in a threatening manner to his supervisor and to other employess at the job site.Mr. Baxter demonstrated his inability to act responsibly and to exert self-contol at the last hearing."

The attorney (Robert J. Stolt of Lipman, Katz & McKee) goes on to say, "Payments of benefits to Mr. Baxter is a lesser evil than someone being harmed by him."

Baxter sued regarding these comments, but the court held that the comments made by the attorney were completely privileged in nature and were therefore protected by law.

Ironically, Baxter's objections have ensured that they will reside in the annals of the Maine courts in perpetuity, for anyone with the desire to read them.

For all of these reasons, and the reasons in the present NAL, I will sign the petition to deny license renewal to K1MAN. I don't believe K1MAN is capable of engaging in good Amatuer practice, as we are all compelled by law to do.

Although I hold no malice toward Mr. Baxter personally, and I believe him when he says he suffers from mental illness, I believe that Mr. Baxter has already amply proven that he does not deserve to remain a Commision licensee.

K1MAN has pending enforcement issues. K1MAN has already been warned by the FCC that he may be referred to the ALJ due to ongoing enforcement issues.

K1MAN's renewal anniversary is on October 17th of this year. Here is an excerpt from an FCC letter to K1MAN dated January 29, 2002.

"The rules of the Amateur Service are straightforward and easy to understand. To the extent that you do not comply with Commission rules regarding the Amateur Radio Service, then to that extent enforcement action will be taken against your licenses. That enforcement action may include revocation of your station license, suspension of your operator license, a modification proceeding to restrict your operating privileges, or monetary forfeiture.

It is also important for you to understand that if these matters are not resolved, your operator/primary station licenses will not be routinely renewed; but instead will be designated for hearing before an Administrative Law Judge. In such a proceeding, you would have the burden of proof to show that your licenses should be renewed."

It's time for Baxter and all of his associates to stand before a Judge.

Okay, I've been waiting for this one.

Kim takes a lot of crap in here for her callsign.

At Dayton this past year, I noticed a group of hams from Texas, who referred to themselves as the K5TIT group. They are some kind of APRS group IIRC. They have a logo which is a rather obvious breast shaped hilltop.

The self-righteous need to complain to the FCC about this group.

I'm not planning on it, finding it much ado about nothing, but time to put the money where the mouth is guys. ;^)

I think anyone over-looking the bigger picture has to suspect that HF will, rather quickly, be taken from amateurs. The abundance of techs is being created to drop the percentage of hams using HF. At some point I suspect a "move" will be made on these all important HF bands and they will be removed from amateur service.

I suspect that techs account for about 50% of activity on the bands now--when that reaches 66%, and certainly 75%, I think HF will be pulled...

Here is Hollingsworth on his "vision(s)", some may interpret it differently:

Sorry which post?
I have never said you are gay.

You deny the one under name without the word Faggot in it?

I was wondering even as I replied to it
or ther other post beofre this one

I would not be certain Stevie was behind (although he may well be) but
there have been cases of people pretending to be stevie to make the
interaction More entertaining to to them

I am curently happy with my own sexual partners (yes I used the pural)

Isn't that rather obvious?

Y'know, for a smart feller like yourself, you just don't get it. So...

Don't do anything different, Jim. Just keep up the good fight - and
let those who wish to get their kicks watching you behave so
predictably....and foolishly....you don't seem to mind serving as the
entertainment, so hey - why not?

Looks like you get exactly what you want here - you are owned!

Well, I did not set out to really keep a tally, but I had loads of fun. This is the first time I've ever operated CW mobile. (But only while parked.) I installed a trunk-lip mount and used a 20m hamstick. The K1's auto-tuner did the rest. I made some quick contacts during lunch and then drove to the beach after work for a couple of hours operating seaside. (Actually "sound"-side, hi) Made lots of nice contacts but prefer longer, dare I say normal, QSO's. Not much DX, understandably, but still managed Belgium and Finland w/5 Watts.

Funny observation, when operating surrounded by water, (Our local beach is on a lazy-L shaped peninsula.) the SWR appeared higher but sig reports and received signals were noticeably better.

Hope everybody got what they were looking for out of their Field Day experience. Take care es...

I said relitively harmless, they are far more dangerous one than
Stevie. more wooried about him inciting other folks with his crap.

Hence i take and have always taken precautions and thus Steve has never
managed to get closer than I have choosen to allow him he has contacted
people that know me and where the trails of breadcrumbs lead

Vermin Like Steve is why I am not nor will I ever be completely honest
on the Internet about my bio or location etc

In a word: No.

It's not rather obvious, Leo.

What *do* you suggest? Just speak plainly rather than
answering a question with another question, or a zinger.

What's your suggestion?

No, someone on here pretending to be me and it pisses me off because that's what got me thrown off the internet in the first place, someone pertending to be me. it was either steve or one of his little buddies trying once again to get people pissed off at me and have kick off again.

Well, I am a bit suspicious if my gov't is not worried about people here
firing up a rig and sending encoded text and documents to other
countries.

And, it has been my experience that if you are willing to give up rights
there will be no end to those taking them away.

However, I'd love to see that VHF rig you fire up to chat with the
Antarctica or the aussies on a reg basis with the sun spot cycle...
well, there is always moon bounce and the internet...

Taking HF away from the ARS is not going to stop that or even affect it

it s howver VHF and UHF that comercail interest are interested in they
don't seem to want hf with its interesting varriations

Sorry we didn't hook up, Bert, but it was a great FD nonetheless.

Set up on a farm in NNJ. Class 1B-1 Battery. with K2 and 80/40 dipole at about 70 feet, alongside a creek. Needed the creek - it was HOT! But being in the valley didn't help propagation.

Made about 170 CW contacts, all on 80 and 40 meters. With the bonuses, should be good for just over 2000 points.

Low-key this year, lots of other things going on, had fun and already planning next year. My first FD was 1968 - don't think I've mised one since.

Poor Woger, he just doesn't get it does he?

You'd think after all the rejection i.e. his birth mother,
AOL, Stratuswave, MSN, etc. he'd get the point.

Although several years ago, Riley's comments are worth a look:

"This Amateur Radio service is serious business."

Not once in the speech is the word "hobby" used.

"...I know that when a natural disaster hits, they're [cell towers] the first ones to go down. And the few that are remaining are jammed and you can't get access. The people who are going to be taking care of the real communications are sitting right here in this room. It's the Amateur Radio service. And in the first few days, or the first few hours of these multi-jurisdictional incidents, it's the amateurs who keep things going."

"There was a big newspaper chain that had a reporter with headphones on listening to the hurricane emergency net. That made us nervous. The last thing we wanted was some bad publicity for the Amateur Radio service anywhere."

"Our people that go to these ITU meetings will tell us that it's often a personal embarassment to them when these countries play back tapes of what they hear on 75 and 20 Meters in the American amateur bands."

On the American 'phone subbands. Not CW/data subbands...

"It puts them in a very difficult position when they have to defend examples of conduct that other countries hear."

Should be "'nuff said".....

Sorry to hear that, Jim. How simplified do you need things to be?

>
>What *do* you suggest? Just speak plainly rather than
>answering a question with another question, or a zinger.
>
>What's your suggestion?

The way I see it, you have two options:

1. Continue to be suckered in to foolish arguments.
2. Do not continue to be suckered in to foolish arguments.

Option 1 is expensive - you become a possession of those who goad you in to responding. A puppet, as it were, dancing at the end of someone's strings....

Option 2 is much more difficult than Option 1 - it requires the intelligence to recognize a legitimate argument from bait, and considerable inner strength to resist the drive to respond, even when you know you are in the right.

Owned or free.

The path you choose will be entirely up to you.

Choose wisely!

Sponge Bob and Mr Bill...?!?!

> No, someone on here pretending to be me and it pisses me off...(SNIP)

And AGAIN you zip right past accepting ANY responsibility for YOUR
behaviour...

It was NOT "just" those letters that got you canned, Todd.

Those forgeries were unfortunate, but YOU provided the forum,
opportunity and encouragement for that kind of behaviour!

> because
> that's what got me thrown off the internet in the first place, someone
> pertending to be me.

No, no, NO!

It was YOU being YOU that got you thrown off, Todd!

And it's painfully apparent that you haven't learned a whole lot
form the experience, either!

> it was either steve or one of his little buddies
> trying once again to get people pissed off at me and have kick off
> again.

If you get kicked off again, it will be YOUR fault.

And it wasn't me, nor was it anyone I know.

BBBWWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
! ! ! ! ! ! ! !

I told you years ago, and I will tell you again just to remind
you...

If you think ANYthing here was a "threat", go ahead and copy this
letter, take it along with references to this newsgroup, and stop by
your local FBI office, Markie.

After the Agent's pick themselves up off the floor laughing at
your "evidence", they'll most likely summons you for filing a false
complaint.

Go ahead...make my millenium!

What crap?

You mean like YOUR lying about being an Officer of the Armed
Forces?

Or having been drafted even though the draft ended before you were
9 years old?

Or about being a "chemical corps" engineer, not allowed to
"resign" your commission because your MOS was so critical...?

> Hence i take and have always taken precautions and thus Steve has never
> managed to get closer than I have choosen to allow him he has contacted
> people that know me and where the trails of breadcrumbs lead

First of all, Mark, you flatter yourself with the idea that ANYone,
let alone me, would "stalk" you.

You're such a pitiful idiot that anyone who REALLY did any harm to
you would be looked upon like someone who just kicked a three legged
dog.

Secondly, to anyone who REALLY wants to know where you are, you're
no more than one, maybe two phone calls away from knowing.

> Vermin Like Steve is why I am not nor will I ever be completely honest
> on the Internet about my bio or location etc

You're not honest about ANYthing, Mark! Why should you even
SUGGEST that you are...?!?!

You're a documented and archived liar. Period.

Of course you wouldn't. You don't deal well with the truth.

Todd Daugherty is a radio scofflaw. He's a wanna-be junior
broadcaster. He didn't get an FCC broadcast license because the FCC
wasn't about to let a foul-mouthed, illiterate idiot have a license,
especially when he couldn't get the simple act of getting the paperwork
right.

Sheeeeeeeeeeesh.

> Just curious

Just a SWAG based on several things:
1. Prospect (unknown) of an NPRM from the FCC before the end of
this year (2005) which then...
2. requires a set of comment phases...followed ultimately by
3. an actual rules change with an effective date usually several
months from the published date.

Cheers,
Bill K2UNK

You're lying again, Mark.

Why do you lie in public so easily?

> > But you ARE a liar, a cheat, a lawbreaker and deadbeat.
>
> And you are trsuing the word of a man you are calling a lair as
> eveidence of his alleged crimes?

Three things, Mark...

First of all, it's "trust"...

Secondly, persons documented as liars can manage to overcome their
handicap and tell the truth...Even you have screwed up once in a while
and gotten something right, even if by mistake...

Thirdly, there's corroborating evidence of his lying, cheating and
deadbeat status...

> > Let's get into a side by side debate over Consolidated's practices

> Control freak!!

Nope.

> and BTW thin skined too and able to dish it but not take it

Show me a valid post of mine where I use the kind of language that
you or Todd use, Mark...

Just one....

> > You refused.
>
> As was his RIGHT

Sure was.

And he suffered the consequences of it.

We all have all sorts of rights, MArk...Just because we do doesn't
mean that everything we "do" as a result of those "rights" means things
will go in our favor.

You're quite right that Todd had the "right" to be foul-mouthed
and insulting.

But I also had (and still have) the right to report behaviour that
I find offensive and ask that something be done about it.

> > Nothing I did was wrong, illegal or immoral.
>
> You could get an augement that YOU steve engaged in the crime of
> Conspirisy to defraud and to deny the Civil right of other people.

No...YOU would argue that. And you'd be wrong.

No one was "defraud(ed)" of anything.

Todd acted his fool. I protested.

He told me to get !@#$ed, etc etc etc.

His ISP's TOS prohibits such conduct.

I presented Todd's behaviour to Todd's ISP. They agreed.

He was warned. He ignored it.

Oh well.

> People do have a RIGHT to disagare with you, even to offend you

And WHY do you seem to insist that the ONLY people who have any
rights are the "offenders", Mark...???

I have rights to.

Todd exercised his, I exercised mine.

> > That YOU don't LIKE it is another story.
>

> >
> > He did nothing wrong, illegal or immoral.
>
> It is imoral for you be a sadistic Steve, since YOUR moral code says
> sadisim is wrong

I am not sadistic because common decency directs it.

You keep suggesting that you know somethig of my "moral code"...

You know NOTHING of any code, moral, Morse or otherwise...

> > > >There a re no "shows" on Amateur Radio.
> > > >A "show" is a program prepared for broadcast for the general
> > > >public.
> > >
> > > first off it depends on who it is directed to...(SNIP)
> >
> > No, it doesn't.
>
> yes it does read the rules

I've read the rules. I've also read FCC opinion and case law on
the subject. Once the FCC finally nails K1MAN, then the full legal
precedent will be set to keep other K1MAN's off the air...or at least
grant the FCC a bigger hammer to nail them with...

> > > ...if it's directed just to
> > > amateur's then it legal, my shows like I said is on radio, electronic,
> > > computers and radio regulations, and until you or little buddies at the

> >
> > If you're producing a "show", it's neither an "information
> > bulletin", nor legal within the FCC's parameters.
>
> no He is calling it a show not producing one

He's producing a show.

He publishes a "program", pubishes a "schedule" and publically
calls it a "show".

It meets the challenge of the definition.

> > > >If you'd "x" out the "bitches" and the "###hole", you would really
> > > >impessed me...
> > > >One step at a time, though, I guess.

> > and "one-upmanship" someone.
>
> LOL you the Gay basher, you need to get up into the sand lot

I am not gay-bashing anyone.

Indeed, I believe that the sooner Todd accepts, acknowledges and
embraces his sexuality, the happier and less troubled he'll be.

It doesn't take a Masters in sociology to see that Todd has
issues, and that they manifest around his confidence and perceptions of
inadequacy. He overcompensates for them with his "show".

gee, sounds like another one looking to get probed by the system for
unprofessional behavior on (and off) the air......

I hate to say this Lloyd, but K1MAN earned whatever actions is being taken
against him. in fact, he demanded this action by his very threats.

in any case, I think I will sign that petition myself, just because Mr.
baxter's actions draw negative attention to the service as a whole.

The HF bands are, many times, international in scope. This story is not about the FCC, it is about international agreements.

What is said in the story is true; many 3rd world countries would love 80 meters as it would provide cheap communications (they don't have to pay to build all the infrastructure of a telephone system to cover their country). If the world community decides that 80/75 meters is to no longer be an amateur allocations, the FCC will have nothing to say about it.

If you look at cell phones, you might get an idea of the extent of the problem. In developed countries, cell phones have become big business. In the U.S., every teenager "needs" one. It takes a lot of cell phone towers to provide service, not to mention ever increasing needs of frequencies.

I believe that when I was first licensed (in 1962) amateurs could use any frequency above 30 GHz. There was little gear that could function at all at that frequency and dx records could be measured in yards or a few miles. Nowadays, there are some amateur bands intermingled with other segments going up to 300 GHz, at which point amateurs can use anything above 300 GHz. 300 GHz in far infra-red light!

Somehow, communications devices are going to have to become more efficient at using available frequencies (amateurs included). Even assuming they do (and they have become more band-width friendly), there will be pressure on all users to use it (effectively) or loose it.

As to the FCC, they can easily reassign users at VHF and above as it doesn't carry world-wide. Those segments are also in jeopardy by big business. Note that the Supreme Court ruled that local governments can exercise their right to take property (with compensation to the owners) and sell it to someone else.

Big business and the Republicans rule.

Next time be careful of who you vote for.

) Of course you wouldn't. You don't deal well with the truth.

I deal fine with it you are not aquianted with the concept

) Todd Daugherty is a radio scofflaw. He's a wanna-be junior
)broadcaster. He didn't get an FCC broadcast license because the FCC
)wasn't about to let a foul-mouthed, illiterate idiot have a license,
)especially when he couldn't get the simple act of getting the
paperwork
)right.

Maybe the above statements are corect Stevie, I have my doubts but
maybe, none that means he is in violation the FCC rules w.r.t. to the
"show"

Sheeeeeeeeeeesh.

one without "nowing" well I am certinaly in the now if that is what you
mean

I am talking about 20 m and the rules, there is plenty I don't knwo in
the world but i do know that
>
> You picked up on a couple of words and made a "reply" based upon a

I picked up FAR more than "a couple of words"

Further if I had made a context error why is it that you have that
right and I don't
>

Jim:

Yes, you touch on globalization and "one world order" and/or "new order" (hey, wasn't that a phrase invented by Adolph Hitler's klick?)

Seems like a little more thought on "sovereign nation" and just exactly what that is might be to our best interest.

Also, seems with each passing day "they" are anxious to give us reasons why we should lose respect for gov't and authority and, the effects of this are rather frightening--it even touches my neighborhood--a place which was once safe and secure.

I can hardly see how this is not having an effect on this great hobby--amateur radio is not an isolated island.

John

No, little girl Lloydie will always be a 6 year old little girl deep down inside.
He also spent a year in an Iowa metnal ward after he tried to kill himself (after stealing money from his mommy's purse and slapping her around). Too bad he didn't succeed.

I likely would have sued regardin them myself OTOH I do enough about
the law to undersatnd the result but a better action might have been to

complain to Bar assoication

However I am glad to hear he tried the action of the Attorney were
clearly borish and sometimes it is neccasary to act go down in flames
on principle

Who's Your Daddy, Birch.net's latest TOS recipient? whined:
> Poor (IKYABWAI)

Poor Lardass pedo, you never get any.

> You'd think

Too bad you never do. Hear back from birch.net yet?
Did the Sarasota newspaper get in touch with Michael Herbert Blevins
again yet. After all, he went to a neo-Nazi rally in Virginia and for a
very short time, has a daycare in his house on Linden Drive in
Sarasota, FL. That is, until this latest info gets to the daycare
licensing authorities in Florida. Not to mention how the N.I.M. buster
sites are a clearinghouse for terrorism in the U.S. BWHAHAHAHAHAHAHAHA

>his birth mother,

And yet you can't prove he was adopted.
Poor Who's your daddy, never backs up what he claims.

> AOL, Stratuswave, MSN, etc. he'd get the point.

The only point is on top of your malformed head, pedo.

Roger wasn't on AOL or MSN. Looks like you need a refund on your Junior
Dickless Tracy detective kit, Fuck up.

Other than PSK-31, name me a mode that takes less bandwidth than Morse code.

The silence is deafening.

Morse is very spectrum efficient; it only uses perhaps 100 Hertz (200 with harsher keying to accommodate high speeds). SSB occupies up to 3,000 Hz, enough room to accommodate 30 Morse QSOs. AM occupies more than twice the space of SSB. FM occupies even more (which is why it is restricted to the upper portion of 10 meters and VHF and above).

Your point about the world and "if the FCC decides to go along with it" has no bearing. The FCC will have *nothing* to say about world-wide allocations on HF and below. The United States is but one voice of many. Majority rule s. The FCC can hand out authorizations based upon the framework of the world agreements, but they can't step outside of that framework. Should the world take away the 75/80 meter amateur allocation, the FCC could *not* allocate those frequencies to American hams.

Of course, if you are a die-hard Republican, you either won't or can't understand that concept. The spectrum below 30 MHz is decided between many countries.

Unless, of course, those countries are hiding all those weapons of mass destruction :))) In that case, maybe we could get involved in a 10 or 20 year war. Good for business, I guess.

73 from Rochester, NY

Hello, John

You are correct - HF (and MF) amateur radio is not isolated. Signals cross international boundaries. As to "sovereign nation, it sounds good and is, except that what we are discussing crosses international boundaries. The international agreements will have to happen - or would you prefer that Radio Moscow rear it's head on a directional array running 5,000,000 watts in the middle of our AM broadcast band?

VHF and above does not often stray far (although the stuff from 30 MHz to perhaps a bit above 6 meters can and does at times, especially during the peak of the sunspot cycle); therefore the FCC is very free to rearrange things that don't affect satellite transmission/reception.

Heck, when you said "one world order", I thought you were going to mention our friend, GW

Perhaps.

> "There was a big newspaper chain that had a reporter with headphones on

Can't newspaper reporters read Morse Code?

> "Our people that go to these ITU meetings will tell us that it's
> often a personal embarassment to them when these countries play back
> tapes of what they hear on 75 and 20 Meters in the American amateur
> bands."

Shirley they're not embarassed by what comes across headline news about
their country. It's only when some old fhart on 75/20M gets riled and
makes a fool of himself that causes national embarassment in America.

> On the American 'phone subbands. Not CW/data subbands...

The Coders should take over the phone bands. Revolution!

The US delegation to the radio conferences looks to FCC for input,
though. (Not just FCC, of course.) There's a big difference between
what happens if FCC says that 75 is such a mess it isn't worth
defending at the conferences versus the reverse.

I think the main point of all this is that it's really up to *us hams*
to
show that we're worth our allocations. That's one reason on-air
behavior really matters!

There's also a lesson in human nature in there, too. When Rudy Giuliani
was elected mayor of NYC, one of his priorities was enforcement of
"minor" laws,
like going after turnstile-jumpers, graffiti and trash/rubbish
violations. Some people asked if tax money wouldn't be better spent
going after drug dealers and murderers. RG's theory was that if you
allow the "little stuff" to get slack, the big stuff gets slack too. In
any event, NYC's crime, large and small, went down.

Same principle applies on the ham bands. But FCC can't do it all -
there's the question of what we hams consider acceptable behavior. FCC
enforcement is complaint-driven - just ask K1MAN. A key factor in his
case is that many,
many hams complained about his violations over a long period of time.

> If you look at cell phones, you might get an idea of the extent of the

Right - but those will be VHF/UHF, not HF.

> I believe that when I was first licensed (in 1962) amateurs could use any

> Nowadays, there are some amateur bands intermingled with other segments
> going up to 300 GHz, at which point amateurs can use anything above 300 GHz.
> 300 GHz in far infra-red light!

Sure - but isn't that the way it's always been?

Back in 1912, hams had access to "200 meters and down" (note - that did
not mean any ham could use any frequency above 1500 kHz! It meant that
individual hams could apply for, and receive, licenses to use specific
frequencies above 1500. So could anyone else, but the professionals and
experts of the time thought those frequencies were useless for
long-distance communications.

When HF was carved into bands, US hams had lots of room. Before 1929,
40 meters was 7000 to 8000 kHz and 20 meters was 14,000 to 16,000 kHz -
exact harmonics of 80!

> Somehow, communications devices are going to have to become more efficient
> at using available frequencies (amateurs included). Even assuming they do
> (and they have become more band-width friendly), there will be pressure on
> all users to use it (effectively) or loose it.

I agree up to a point.

Most of the communications revolution has nothing to do with radio.
It's all about fiber optics. Heck, I bet that the vast majority of
telecommunications today (in terms of bits/mile) does *not* go by
radio, but by copper or glass. Cell phones, Wi-Fi, etc. are simply a
way of getting the last mile without a wire or fiber. Broadcasting as
we knew it will probably morph into something aimed mostly at mobile
users.

Heck, the real value of HF (as perceived by regulators) is demonstrated
by BPL.

> As to the FCC, they can easily reassign users at VHF and above as it doesn't
> carry world-wide.

Some of our bands are not protected by treaty, others are. 144-146 is
worldwide exclusive amateur, FCC can't touch it without a treaty
change. 146-148 could be reallocated whenever FCC feels like it.

> Those segments are also in jeopardy by big business.
> Note that the Supreme Court ruled that local governments can exercise their
> right to take property (with compensation to the owners) and sell it to
> someone else.

They took eminent domain to a new high - or low.

Think what it means! Once it was the case that your house could be
taken to build a public works project (road, school, bridge) on the
theory that the public good demanded it. Now the Supremes are saying
that "the public good" includes a *private industry* developer who
wants to put up McMansions.

>
> Big business and the Republicans rule.

"What's good for General Bullmoose...."

I've always been careful that way...

But the Dems have a way of nominating candidates that too many people won't vote for. They're well on the way to doing it again with Hillary. She's the best friend the 'pubs ever had!

Friend of mine once said that if you gave the DNC the job of organizing a firing squad, they'd put the squad in a circle around the condemned person.

From: N2EY@AOL.COM on Mon 27 Jun 2005 03:19

>Although several years ago, Riley's comments are worth a look:
>
>"This Amateur Radio service is serious business."

From Riley Hollingsworth's position as Special Counsel to the
FCC Spectral Enforcement office of the Enforcement Bureau,
obeyance of federal law IS "serious business."

>Not once in the speech is the word "hobby" used.

?

Hollingsworth is NOT in the FCC "Key People," "Division Chiefs,"
or "Regional Director" listings at the FCC of their Enforcement
Bureau. One has to go deeper into the Spectral office of the
Enforcement Bureau where Hollingsworth is listed as second from
bottom on that office's "key people" listing...as one of two who
are "Special Counsel."

Hollingsworth is NOT over at the Wireless Telecommunications
Bureau, the one that is immediately responsible for amateur radio
at the FCC.

It is true that nowhere in Title 47 C.F.R. are the words "hobby"
or "ham radio" given. On the other hand, Part 97 rather
specifically defines amateur radio as an activity done for a
NON-pecuniary reason. That doesn't even mention "money" though
it is obvious that it means that amateur radio CANNOT accept
money for doing any communications service for others.

Amateur radio in the USA is forbidden by law to engage in
broadcasting. Amateur radio in the USA is forbidden by law to
be a public communications common carrier...that is, specifically
as a provider of radio communications services. Amateur radio
regulations even state that amateur communications themselves
are to be of a trivial nature and amateurs themselves are
supposed to avail themselves of commercial communications
services for non-trivial communications.

Amateur radio in the USA is NOT a "national service." All
throughout Title 47 C.F.R. the word "service" is a regulatory
term denoting a type and kind of radio activity being regulated.

Is the Citizens Band Radio SERVICE a "national service?" No.
Is the Amateur Radio Service a "national service?" No.

There's a difference between words used "de jure" (by law as stated) and "de facto" (what it really is in practice). Amateur radio is a HOBBY...a recreational pursuit done for personal pleasure, federally regulated only because of the physical nature of radio wave propagation and possible interference with other radio users. DE FACTO a HOBBY.

>"...I know that when a natural disaster hits, they're [cell towers]
>the first ones to go down. And the few that are remaining are jammed
>and you can't get access."

Hollingsworth is "playing to his audience" (to use a show business phrase).

Physically, the cellular telephone services, an adjunct to the wired telephone infrastructure, does NOT "go down" either "first" or last. TELEPHONE communications is "jammed" only by too many panic-stricken subscribers trying to use it simultaneously at the onset of some emergency. The TELEPHONE infrastructure would not have survived as a communications service provider if "all" subscribers were free to use it simultaneously.

>" The people who are going to be taking care
>of the real communications are sitting right here in this room. It's
>the Amateur Radio service. And in the first few days, or the first few
>hours of these multi-jurisdictional incidents, it's the amateurs who
>keep things going."

In light of recent REAL EMERGENCIES, REAL HISTORY has shown that the commercial services HAVE CONTINUED TO WORK despite SOME of their facilities being "downed." Facilities are NOT RESTRICTED to JUST telephones, wired and/or cellular. There are, in this nation, literally, hundreds of thousands of OTHER radios which can, and have, been used for two-way communications. That is NOT counting CB or the approximately 100 million cellular telephone radio handsets.

Eleven and a half years ago, during the Northridge Earthquake in Los Angeles, NO amateur radio "emergency communications" were working in the first hours of the earthquake-induced TOTAL AC POWER OUTAGE. Public safety and utility radio services were on the air and working despite the total electrical mains supply being OFF. It took at least six hours for the Los Angeles area power to BEGIN to be restored to subscribers on that necessary BLACK START. Public safety and utility radios continued to function, police and fire and paramedics rolled on calls, hospitals were there with their own electric power and serving patients. TEN MILLION residents were affected by that quake and total power outage.

Hollingsworth is a special counsel to the Enforcement Bureau's Spectral enforcers. He should KNOW BETTER than to perpetuate such myths as he stated. But, Hollingsworth does NOT

specifically speak FOR amateur radio. He is little more than
a "radio cop in a suit."

>"There was a big newspaper chain that had a reporter with headphones on
>listening to the hurricane emergency net. That made us nervous. The
>last thing we wanted was some bad publicity for the Amateur Radio
>service anywhere."
>
>"Our people that go to these ITU meetings will tell us that it's

>
>On the American 'phone subbands. Not CW/data subbands...

Oh, my, another MYTH. Simon Pure morseman "does not swear with
morse code!" He is "safe to be around the children?"

[how many children did you say you "parented?"]

>"It puts them in a very difficult position when they have to defend
>examples of conduct that other countries hear."

All those "75 and 20 Meters" radiotelephone users were
CODE TESTED (or had the equivalent of same).

The CODE TEST does NOT prevent verbal abuse via radio.

>Should be "'nuff said".....

Here's another: David Sumner's editorial pieces in QST are done
by David Sumner. James Miccolis has not been invited to become
any "guest commentator" or "moral guardian" of U.S. amateur radio.
But, he has set himself out as the same sort of "moral guardian"
and "giver of ethos" as if he was "respresentative" of over
700 thousand U.S. amateur radio licensees.

Even then he perpetuates the past with parodic perfidy.

In that FCC's NAL has concluded that Mr Baxter operations are in
violation of statutes duly authorized by the FCC to enforce, they have
seemed to fallen short of asking for the revocation of his license.
From the NAL, I see the FCC is only a seeking of monetary remedies and
not a revocation of his license.

As much as I see, and I do not condone his actions, the actions of
some have taken on the role as a lynch mob. I myself will abide by
what ever the FCC determines. But I find this petition thing a bit to
scary. WHo next? So someone operates by the rules but not as someone
or some group and then they are next for a petition campaign? Just
because you and other deem his actions is a negative attention?

Good show Mike. My local club, The Calhoun County Emergency Radio Club had a nice field day in a park, lots of publicity. Down the road the Calhoun County Amateur Radio Association had their own FD and had good publicity and public officials come by. My group managed 454 qso's 3A AL.

I came home and passed out a couple hundred qso's on CW myself 1D AL.

Yet you were the one who could not be bothered with MARS information
after that fateful day when you claimed, "Sorry Hans, MARS >>>IS<<<
Amateur Radio!"

Hi, hi!

And you wonder why no one believes you when you claimed to be "A" NCOIC
of MARS/Okinawa.

> > Been to Fort Huachuca, too, (Hq Army MARS, off to one side of
> > the Military Intelligence School).
> >
> > They've been trying to get the smell out ever since, too.

Hi! Awesome! Great comeback! Good one! Attaboy! You go, Steve!

> > > ...to get it from the horse's mouth.
> > >

Not when that SOB sits down on top of me and those I am in QSO with. All
that idiot would have had to do was use this little phrase "Is this freq in
use". And follow that up with "I am intending to use 14.275 to send my
bulletin, would you guys mind standing by for it". You know what Toad?
To a man we would all agreed to move. But oh no....not the mighty MAN. He
comes on and DEMANDS we clear HIS frequency. And yes I am ONE OF THOSE
that sent in the multitude of reports, and proud of it.

Why isn't he on 14.275 any longer ?????? I'll tell you why....he got his
arse whipped like a mangy dog thats why.

It was from the district office the wanabee boy broadcaster stated. Where do you think the order to do so came from nitwit? Right....FCC headquarters.

Wake up me boy. When the FCC comes down on you like this.....you are history. This isn't anything new, its been in the works since the mid 80s. It just took a bunch of dedicated hams that were willing to stand and fight to get the ball rolling. And your talking to one of them right now.

I suggest you forget your little broadcasting career, or get ready for a history repeat. Understand? And no Toad...its not a threat....its a promise. Ham radio is sick of you children trying to mess up our play pen.

Dan/W4NTI

We've been working hard to get the word out, and it seems to be working. One thing I've discovered is that you can connect with the folks with the computer, because that symbolizes something to them, (and heck, I just plain like the soundcard modes) then you move them to voice, and finally take them on the tour of the CW station. Once they understand the other modes, the simplicity and elegance of CW isn't lost on them.

> Down the road the
> Calhoun County Amateur Radio Association had their own FD and had good

Didn't get ours complied yet. Our phone station had a problem around 1:30 a.m. Sunday morning. The G and H keys stopped working. Fortunately we didn't lose any data, but we have to double check everything.

> I came home and passed out a couple hundred qso's on CW myself 1D AL.

A good chance we logged ya.

It is probably just easier that they decline to renew his license in
October.

> As much as I see, and I do not condone his actions, the actions of

Many people are just not terribly patient, and the F.C.C. has
methodically in their case against him.

> But I find this petition thing a bit to
> scary.

It is at least unnecessary and a possible impediment.

Remember that there is a lot of pent-up frustration in this case.

> WHo next? So someone operates by the rules but not as someone
> or some group and then they are next for a petition campaign? Just
> because you and other deem his actions is a negative attention?

Not at all likely. Hams put up with some pretty impressive shenanigans.
But it must be remember that he was sending out those felony affidavits,
and at the same time, opening up and transmitting over whoever happened
to be operating on "HIS" frequency.

Problem is it wasn't his frequency.

There seems to be a long, long history here.

>of MARS/Okinawa.

Now, now, Brian, the ASSISTANT NCOIC is a very, very IMPORTANT
job, a Vital Service to the Nation...for being a part of the
morale boosting normally done by others in Special Services.

ASSISTANTS get to make the coffee for all those late-night
"communicating" sessions.

>> > Been to Fort Huachuca, too, (Hq Army MARS, off to one side of

>> > Soldiers. Fort Huachuca is the original home of them.
>
>> Was that in ChiefMARS comments? I missed it.
>
>Buffalo Soldiers no use Signal Company?

The troop's buglers blew morse signals on their bugles...?

Actually, there was a "horsie-talkie" radio set, the SCR-511.
Went into production in late 1942. TM 11-245. (I have a copy)
Unfortunately, the Army had disbanded horse cavalry before
production started! :-)

Nice design idea. Operator wore a "chest unit," a flat pack
containing dry battery and a combo microphone-speaker with
old-style telephone curved horn. Right hand held the handle
at the base of the whip with a push-to-talk switch on handle,
radio box below that, and at the bottom a pole that would fit
the guidon socket on the right stirrup of a military saddle.
Left hand was free to hold reins. It went obsolete as soon as
it was delivered...

It's a wonder he doesn't set fire to himself through all that
patriotic bunting he puts on himself...even though his eyes are
burning red with the hot embers of HATE. Flammable volatile
situation.

>> No "glorious self-illumination" comments then, eh, Lennie....?!?!
>
>The Chief's comments didn't do quite what you wanted them to do.
>
>Too bad for Steve.

Stebie needs to turn in his day pass to the Halls of Montezuma.
Navy MARS doesn't run under Army MARS...but both run at the
discretion and direction of Department of Defense.

>> > Stebie wants

If I did, I'd be smiling. Still got my teeth firmly attached.
And I brush every day, have regular checkups at my Russian-
born dentist's office in Burbank (Dr. Leonov). :-)

If Stebie got his teeth worked, maybe he'd smile and show them
in one of his many photos-with-uniforms.

>> Like all those posts where you pretend to have been "somebody" by
>> having been in a unit that had KIA's a few years earlier...Years that
>> you weren't even in the service...
>
>Of course, there were people who didn't serve at all in here telling us
>what is important.

Tsk. Snarly Stebie doesn't believe in honoring past members
of his unit. Thinks mentioning such is "self-glorification."
Of course, Stebie's sense of "honor" is "different" than other
folks. He probably goes to VA cemetaries every Memorial Day
and spits on those planting the American flags at gravesites.

>> > MARS is doing an okay job for the military. Keeps civilians

>
>> Again you cite things that were "THIRTY YEARS AGO", but not what's
>> happening "TODAY"...
>
>And today, "MARS >>>IS<<< Amateur Radio!" Hi! How things have
>changed.

"Today" one can read (via the ARRL) what hams did for MARS of
thirty years ago AS IF it were "today." :-)

The Vietnam War ENDED (for the USA) THIRTY YEARS AGO.

TODAY the military has the DSN to connect into the Internet, world
wide. Where ever a base is even semi-permanently located, they
have DSN nodes to it. When not in use by military traffic it is
free for personal use.

At least two national corporations offer "phone cards" low cost
for Gifts to Servicemen. Pre-paid, those can be used by service
personnel (here or overseas) on any telephone service, private
or military.

>> Of course you ALSO cite what happened at "ADA" in the 50's as if it
>> happened yesterday, but then attempt to chide Amateurs for discussing
>> what happened SIX years ago.

>
>All Jim's postings about amateur radio in WWII cracks me up, too.
>
>Obvious.

Jimmie posts about ham radio in World War TWO? I thought they
were posts about and prior to World War ONE!

Poor Stebie. Best he ever got for military HF comms was as
ASSISTANT NCOIC of a small MARS station. He never worked in
the Big Time of HF military comms.

>> > MARS is a part of SHARES...(SNIP)
>
>> Yep.
>
>> And that doesn't detract ONE BIT from the TITLE of the
>> thread...Actually, it ADDS to it.
>
>Actually, I shortened it.

Stebie wanted to be a part of Grecian Firebolt but he couldn't
get his match lit...or speak Greek.

>>> > Does the U.S. military need ham-assisted phone patches now?
>>
>>> Is "ham-assisted phone patches" ALL that the Armed Forces expects
>> from MARS...?!?!
>
>> Nope.
>
>> And Lennie wouldn't know that, considering his experience level in
>> MARS and/or Amateur Radio.
>
>Be specific (if you can).

Stebie not know of the AN/FRC-93, a standard radio at MARS
stations of 30 years ago. Tsk, tsk.

Stebie not know of standard small-unit radio AN/PRC-119 that
went operational in U.S. military in 1989...when Stebie was
supposedly still in USMC.

>> > MARS was never designed/implemented/devised to be a PART of
>> > mainstream military communications. It isn't now.
>
>> Nope. It wasn't. Who here said it was? I sure didn't.
>
>Right. You just make stoopid assertions, such as "Sorry Hans, MARS
>>>>IS<<< Amateur Radio!" because you don't know dink about MARS, your claims to >having
been "A" NCOIC MARS/Okinawa notwithstanding.

Stebie is very, very busy trying to light his match to blaze
hisself in the glory and majesty (his idea) of MARS-manship.
[ASSISTANTS get like that some times...]

>> > All of the above I wrote today has been written by me in here
>> > before. Apparently Stebie is way too selective in what he
>> > looks for on Google searching.
>
>> Nope.
>
>> What I point out is that you denigrate and deny the services and
>> achievements of MARS and Amateur Radio services alike.
>
>You denigrate other amateurs. You insult real MARS members with your
>stoopid assertions.

Stebie is too full of HATE in here of others that don't care
to kiss his royal (marine-issue) ass. :-)

>> ChiefMARS has to answer to higher-ups in the "MILITARY" chain of
>> command.
>
>Duh.

Poor Stebie, took him months to acknowledge the latest Directive
from the Department of Defense actually EXISTS! :-)

>> > [Stebie is now going to compose a "YOU LIE, YOU LIE!" message]
>
>> I don't need to yell them out, Lennie. Your mistruths are usually
>> glaring enough to stand out on their own...
>
>Your are obvious. Obviously wrong about a lot of things.

Stebie NEVER WRRRRONNNNNGGGG. He call all others nastynames
if they say he WRRRRRONNNNNGGGGG.

All the PCTA extras be big "bell ringers" in here. :-)

Maybe they hope to graduate from "Ding Dong School?" :-)

>> > LenStillDoesn'tKnowAthingAboutMARSorAmateurRadioAnder...@ieee.org
>
>> Putz.
>
>> Steve, K4YZ
>
>SteveStillDoesn'tKnowDinkAboutMARSorAmateurRadioK...@aol.com

Poor Stebie. Still resentful that I've been a professional and
having begun HF radio communications before he was born. Such
HATE he has. Tsk, tsk.

Now he is HATING the military and MARS by not understanding what
they really did as Special Services radio for the troops...30

years ago. Well, he's got all that patriotic bunting of glory
and speechifying he wraps hisself in...his new "uniform." Too
bad he can't show his teeth in those Very Serious Uniform Poses.

making that as a declaritive sentence has to be a lie

Case 1 the best BTW you realy don't know who did it and thus you can't
say it was or was not anyone you know.

Case 2 You do know which means you know the prep and are lying in
claiming you don't the perp

Ah - it is true, he has missed the pebble. Again. (sigh)

But take heart - perhaps there is a greater treasure to be attained.

Perhaps, by missing the little pebble he is but one step closer to the
final destination.

He must decide.

73, Leo :)

We don't require knowledge of given mode meraly a scatering of them.
you could choose to know nothing about psk and get your license. but
not Morse encoded CW

>

It isn't an equalizer it is a discriminating factor based on the abilty
of the brain to process certain data types

Few people start at the same place, the feild is simply not level, level playing field is what the US is about, can't always manage it but in theory we try

People can and do skip over a question here and threre Indeed when I took my tests for tech I skiped over learning the band edges of the novice bands I took a guess when the time came

Why? We don't require it you don't have to get right fully 25 percent
of the stuff, and you can pick and choose what not to know

>
> IOW, why require anyone to learn anything about a subject they

Not true, surely you understand that not everyone has the difficulty in
learning Morse Code.

That creates a bias based on brain fucntion and anything but a level
feild

Nevermind the journey. It's probably time to hear again about the
exploits of amateur radio during WWII.

Hello, Len

LOL, no I didn't save Saipan. I simply made initial contact with Hans who *was* on Saipan loading a chain link fence, I believe, as the Coast Guard tower had been blown over. At that point, I was due on watch and 3 other guys took over at KG6AAY. They were the ones secured from all other duty. I went to my regular assigned job in crypto.

It was the other guys who maintained communications with Rota and a number of them got citations from Captain Delaney (our commanding officer).

The only reason that the Navy radiomen didn't make contact is that they didn't realize that Han's signal was so strong that it was overriding the local oscillator, thus rendering the SSB signal unreadable. Had they pulled the antenna and stuck a coat hanger in the antenna jack in the radio, they'd have had good reception.

John,

You must realize that I *love* the United States. It is because of that love that I am very afraid of GW.

The attack on Afghanistan was fully justified, especially since they wanted to protect Bin Laden.

The attack on Iraq seems more than a bit muddied. Now that one or two generals mentioned what was needed and that things were not going as expected, I'd expect heads to roll (their heads).

I have great faith and trust in our military. GW was not listening to his military advisors as to what was needed in the first place, and I shan't mention the missing weapons.

Many members of the military who have been in the military for a couple of decades have experienced war. The high ranking officers likely have lead in some of those ... um ... skirmishes? I suspect they have a far better idea as to what it takes than someone who apparently found a way to avoid military service almost entirely (except for, perhaps, a week). High ranking military officials have input that is sorely needed in the White House; unfortunately, they were ignored.

I have no desire to appease either the French or the Muslims. I do wish, however, that I could go back to my grandfather's native Scotland if only to visit.

Oh my, yet another version of the "Hans Is A Radio Hero" story.
Down at the Legion, they have at least five or six different
versions of the story, with the best versions being told after several
shot 'n beers are consumed by the grand story teller.
Yawwwwwwwwwwwwwwn, why do old men never tire of telling
borrrrrrrrrrrrrring embellished war stories?

the FCC has even told K1MAN that his published schedule didn't mean
squat, and that his published schedule was no excuse for interfernce.

> >> W1AW is a real organization. K1MAN is a one man pony show.

> "information bulletin". What you think?

the main problem that I see is that amateur believe an information
bulletin cannot be opinionated, yet there is no rule on it. Many
amateur believe that those who run information bulletins should only
run "newscast" however, if the FCC wanted it to be only newscast then
they would specify that it should be only a newscast, the FCC has the
ability and power to specify what an information bulletin is. The FCC
has the power to limit what an information bulletin is, provided that
it is the least restrictive mean necessary to promote govenment
intrest, the problem is they don't.

No, according to the NAL at the bottom it was from the district office
in boston, I read the NAL from the FCC's site. I really suggest on how
the FCC is set up before commenting on something like this. (see below)

from http://www.fcc.gov/eb/FieldNotices/2003/DOC-259301A1.html

FEDERAL COMMUNICATIONS COMMISSION

Dennis V. Loria
District Director
Boston Office
Northeastern Region
Enforcement Bureau

I seriously doubt it would be "interesting." It was just
"ARRL south" parrot phrases. AOL did not have a large
ham radio group. If it was archived, it would be on AOL
(which I can access) but it was the same old stuff as in
here.

Usual tactic is to jump off into a NEW preaching subject, this
week it is "Riley Hollingsworth Speaks!"

Looks rather like a Sermon on the Antenna Mount first draft...
along with a segue into U.S. ham radio a la 1912. :-(

>> All who speak contrary to His wisdom are WRRRONNNNGGGG.

Got any more CUT AND PASTE from "200 Meters and Down?"

Anybody in here born BEFORE 1929, senior?

>Most of the communications revolution has nothing to do with radio.
>It's all about fiber optics.

Really?!? "Nothing to do with radio" yet it is a main subject
of the following trade magazines: "Microwaves and RF," "RF
Design." Not to mention the big Microwave Symposium recently
in Long Beach, CA.

The 100 MILLION plus 2-way RADIO handsets (called "cell phones")
don't have any "fiber" attached to them.

GPS doesn't work by "fiber."

Those hundreds of thousands of public safety, utility, transport
companies, businesses of all sizes, in VHF-UHF aren't communicating
via "fiber."

WLANS are RADIO since they were done to get AWAY from "fiber."

RFID tag interrogators are working in RADIO frequencies in stores
all over the USA and possessions. No "fiber."

Bluetooth devices are short-range two-way RADIOS without "fiber"
and most of those work with fiber-less cell phones.

YOU need more mental fiber in your knowledge diet.

> services for non-trivial communications.

However the FCC >>ALSO<< says that Amateur Radio is a pool of
radio operators for EMERGENCY communications, and both history and
current events bears out that Amateur Radio is/was/and shall continue
for the foreseeable future to be the resource of choice for numerous
disaster relief providers and agencies, public and private.

> Amateur radio in the USA is NOT a "national service."

Sure it is.

> All throughout Title 47 C.F.R. the word "service" is a regulatory
> term denoting a type and kind of radio activity being regulated.

Keep repeating that to yourself over and over, Lennie.

> Is the Citizens Band Radio SERVICE a "national service?" No.

Sure it is.

> Is the Amateur Radio Service a "national service?" No.

Sure it is.

> There's a difference between words used "de jure" (by law as

Neither of THOSE terms show up in Part 97 either!

> Amateur radio is a HOBBY...a recreational pursuit done for personal
> pleasure, federally regulated only because of the physical nature
> of radio wave propagation and possible interference with other
> radio users. DE FACTO a HOBBY.

Wrong.

Amateur Radio is a radio service that may be USED as a hobby, and
virtually is.

However there are a great many things in this Nation of ours that
it's citizens do for their own personal gratification (ie: hobby) that
I seriously doubt anyone would consider a "hobby"...EMS, or Emergency
Medical Services, for example. Depending on whose numbers you like
better, anywhere from 55% to 75% of EMS is provided by volunteers.

Ditto fire suppression...(yes, even in Southern California,
Lennie...)

By YOUR rationalization, Lennie, we can call EMS and fire
suppression "hobbies".

How assinine would THAT be...?!?!

> >and you can't get access."
>
> Hollingsworth is "playing to his audience" (to use a show business
> phrase).

No.

It's documented fact.

> Physically, the cellular telephone services, an adjunct to the
> wired telephone infrastructure, does NOT "go down" either "first"
> or last.

No...In Southern Florida this most recent past hurricaine season,
many of the towers WENT DOWN...Not meaning "for maintenance" or due to
"overload"...They were toppled.

> TELEPHONE communications is "jammed" only by too many
> panic-stricken subscribers trying to use it simultaneously at the
> onset of some emergency.

That too. But inoperative is inoperative.

> >" The people who are going to be taking care
> >of the real communications are sitting right here in this room. It's

> >keep things going."
>
> In light of recent REAL EMERGENCIES, REAL HISTORY has shown
> that the commercial services HAVE CONTINUED TO WORK despite
> SOME of their facilities being "downed."

And some have not...In some cases for WEEKS.

In those cases, Amateur Radio was asked to and did fill those
gaps.

> Facilities are NOT
> RESTRICTED to JUST telephones, wired and/or cellular. There
> are, in this nation, literally, hundreds of thousands of OTHER
> radios which can, and have, been used for two-way communications.

"We" know that...because "we" are asked to man those other
facilities...Hospitals, fire stations, Red Cross offices.

> That is NOT counting CB or the approximately 100 million
> cellular telephone radio handsets.

CB is useless as anything other than an ancilliary function, and
cellphones have too many of their own inadequacies to "go the
distance".

Proven.

> Eleven and a half years ago...(SNIP)

Lennie, yuo keep citing ONE instance where there was no MAJOR
implementation of Amateur Radio as an interim communications resource.

One example in over 90 years of history does NOT a trend make.

> Hollingsworth is a special counsel to the Enforcement Bureau's
> Spectral enforcers. He should KNOW BETTER than to perpetuate
> such myths as he stated. But, Hollingsworth does NOT
> specifically speak FOR amateur radio. He is little more than
> a "radio cop in a suit."

He did not lie.

He did NOT "perpetuate such myths"...

You are welcome to try and refute his comments, Lennie, but
there's tons of historical (and yes CURRENT historical) evidence to
support eacn and every word.

> >"There was a big newspaper chain that had a reporter with headphones on

>
> Oh, my, another MYTH. Simon Pure morseman "does not swear with
> morse code!" He is "safe to be around the children?"
>
> [how many children did you say you "parented?"]

What myth?

Unfortunatley there ARE some very ill-mouthed persons just as Jim
described.

And in over 30+ years as an Amateur, mos tof which was HF-CW, I
have never "heard" a profanity...

I can't say that of phone operations.

If you had any practical experience, Lennie, you'd know.

Heck, if you even tuneded that antiquated R-70 down band a bit
you'd know better...

> >"It puts them in a very difficult position when they have to defend

>
> All those "75 and 20 Meters" radiotelephone users were
> CODE TESTED (or had the equivalent of same).
>
> The CODE TEST does NOT prevent verbal abuse via radio.

WHO said it did?

However it DOES appear as though code USE at least minimizes if
not prevents "verbal" abuse...Whether it's just a better class of
people or the "effort" one has to put into it makes it less attractive
to potential abusers.

> >Should be "'nuff said".....

>
> Even then he perpetuates the past with parodic perfidy.

Can we add that certain ex-radio technician and his Army days to
that?

Seems he has HIS weaknesses about wanting to be the "moral
guardian" of a radio service that he haas NO licensure or vested
interest in...

The tech pool is good for at least a year or possibly longer. No changes
are being made to any license class pool this year at all. The only
thing that might change things is a rulemaking change by the
FCC but even that would take upwards of a year before
becoming effective.

On Mon, 27 Jun 2005 23:11:02 +0200, Secwet Woger wrote:

: By thinking somebody can be traced to somebody else who uses two
: or three remailers to send these messages.
:
: If the message headers are stripped away and encrypted along
: with the message before they get to the final remailer (the one
: on the post itself), and each of the sending remailers adds
: their headers how can it even be traced back, stupid? Goddamn,
: your fucking ignorance has no boundries.
:

If the police have forced the ISP to give them full access to the remailers' hard drives, then all bets are off. The remailers' private keys are at risk (and are undoubtedly compromised), as are all of their log files. The Paranoia Remailer people pointed all of that out, Woger. You should pay attention to what they wrote.

In short, the police have full access to all headers and to the full body of each post. Couple that with the fact that the police have been eavesdropping on several remailers for a time period in excess of a year, and your cover has definitely been blown. If you should have selected a tapped remailer as your first remailer, the police know everything they need to know about you in order to backtrack the posts to your computer.

And, Your Foolshness, you seem to be totally ignorant of the fact that more than one remailer is tapped. It's all been done as a part of the international fight against terror.

Have fun sweating, Woger.

Are you really that stupid, Mark, or is it a seasonal thing?

> > And it wasn't me, nor was it anyone I know.
>
> making that as a declaritive sentence has to be a lie

Nope.

> Case 1 the best BTW you realy don't know who did it and thus you can't
> say it was or was not anyone you know.

Sure I can say it.

Because no one on MY friends list was responsible.

There's a considerable "back channel" flow of communications going
on, sometimes moreso than others.

No one >>I<< know is responsible.

> Case 2 You do know which means you know the prep and are lying in
> claiming you don't the perp

Nope.

It is as I said.

Deal with it.

So take Dan's suggestion and file a complaint. Of course you'd
ahve to actually be talking to someone on the frequency W1AW operates
on, and I can't see you carrying on a coherent QSO with another human
being for that long.

> > That is correct. Maybe one day Baxter will actually transmit a
> > "information bulletin". What you think?
>
> the main problem that I see is that amateur believe an information

"Opinionated" is editorializing...NOT reporting.

An "information bulletin" passes INFORMATION that is pertinent to
the operation of the radio station...Not subjective opinion.

> Many
> amateur believe that those who run information bulletins should only

That's like saying that since you're using Yahoo, and you can
search for sexually explicit content on Yahoo, YOU are running a porno
site, Todd.

> > Not when that SOB sits down on top of me and those I am in QSO with. All

You're not sending a bulletin. It's a show.

So says you.

> > It was from the district office the wanabee boy broadcaster stated. Where

You wouldn't need a "waiver" if you'd just do it right the first time.

Quit your whining and hire a REPUTABLE communications attorney to help you. You're obviously grossly overwhelmed when it comes to administrative matters. Let him do it for you.

The application will be a lot more impressive without the crayons and "Beefaroni" stains above the signature of non-existant corporations.

> not a revocation of his license.

as I pointed out elsewhere, its not a revocation (though the issuance of an NAL is one of the many steps toward this end), its is a petition to deny renewal based on his past actions and his failure to shape up (poor character).

There is one thing I don't think a lot of folks in here and on ham radio in general realize: that license is a privilege, not a right.

Mr baxter is treating it like an entitlement (which it is not). since he has failed to conform to the rules, he must therefore be slapped by those rules. its that simple.

>
> As much as I see, and I do not condone his actions, the actions of

> or some group and then they are next for a petition campaign? Just
> because you and other deem his actions is a negative attention?

how does a petition compare to a lynch mob? this is an orderly attempt to force compliance with the rules (or failing that, to have his license set aside by denial of renewal)

Mr. Baxter has been behaving in much the same manner (albeit with some twists) as that other pain in the neck on the west coast: Gerritsen. Admittedly, Mr. Baxter hasn't quite gone this far, but given human nature and behavior, it would have happened sooner, if not later.

in any case, my opinion is that the petition is a good starting point. it is operating within the system (instead of what you imply by a lynch mob).

No...you're one in all of them.

> (UNSNIP)...then you adkonweldge my balls (paraphrase)...(SNIP)

What is "adkonweldge"...?!?!

And a paraphrase is not an accurate quote.

> (UNSNIP)...in and
> another is this your confused mind or your sexaul obbcession with male
> gentails at work

I think you meant "obsession" and "genitalia".

In either case, you are, again, wrong.

"...thieves", Markie, and no, I'm not.

Suggest you research "Thomas Robeson" of South Carolina, circa
1700's.

> > You steal people's trust and confidence with your own tales and

Yes, Markie, that's your self description of yourself. Very good.

Tomorrow we'll work on "s p e l l i n g"

Steve, K4YZ

What lies?

You keep insisting that I've uttered lies here, yet when asked to
substantiate them, you simply avoid the question and move on to even
more obscure accusations.

> What >is< begging a response is your claims of alleged hostile actions,
> but I suspect those would be lies as well.
>
> Robeson is not to be trusted.

You were given some of that information once upon a time.

You promised that it wouldn't be discussed on the NG.

Then you turned right around and did it anyway.

Brain P Burke, N0IMD, "billybeeper" is a documented chronic liar.

Again.

And I don't demand that you can't have yours, merely that you (nor
anyone else) may use them without accepting responiblity for the
results of such usage

Your statement that I in any way deny your rights is another lie on
your part.

>
> Same with Toiddie. He likes to throw "IT'S MY RIGHT" around as if
> saying so shields him from responsibility.

You MAY have a point. It isn't clear to me, having not enough data to
guide me through the invective, but in your case. I can see what you

are doing. You are abusing your rights by taking actions and dening
your responsible for doing

Indeed your statement is your doing what you accuse Todd of doing
>
> T'aint so.

Never said it was

Are they? what they are doing is anything but clear, aside from the
fact that the whole thing results from a LONG history of interaction
between the ARRL The FCC and Baxter. It is also clear the we here in
RRAP lack a number of facts

>
> > The FCC

> amateurs to expunge those with whom they disagree.

Is petitioning vigilantism? This seems like a very civil method of a
group letting their opinions be known.

There is a reason that many hams across the nation do not like Mr.
Baxter. Perhaps they have been interfered with by his broadcasts.
perhaps they have been served one of his "felony affidavits". Perhaps
they believe that he is in violation of Amateur Radio regulations, and
has been so for a very long time.

> There is already a system in place, but it isn't giving them the
> results they want, so they seek to find ways to take things into their
> own hands.

How is this "taking into their own hands? The petition has no legal
binding for the FCC. All this is doing is giving the message that a lot
of people do not think Mr. Baxter is deserving of having his license
renewed. It is their opinion, and they may express that opinion because
it is protected by the Constitution.

And it is an opinion that can reasonably be reached by reasonable people.

> That is the path to anarchy. That is the path chosen by fools.

Freedom of speech is the path to anarchy? Oy.

another foregery How flattering to Todd and myself to be so important
that folks need to forge post derected at one of us from the other in a
thread started by Stevie to attack us both and yet Steve does not knwo
who did but knows he does not know.

Prehaps I have it, Stevie may suffer from multible personality
disorder, and he is doing it but doesn't know the other self

All you had to do was to follow the URL I listed
(http://www.autistici.org/it/remailer_splash.html) to discover that
the claim of compromised remailers is correct.

But that would involve following directions and reading something, and
I know that's pretty much beyond your capabilities.

You could also drop on by some of the privacy groups on Usenet and
read what they have to say about the whole situation. For example,
did you know, Woger, that some of the anonymous remailers are operated
by the CIA?

Hey: At last you can have the CIA people talking to the FBI people
you harassed over at their Pittsburgh FBI office! It will give them
all a chance to laugh at you again.

Opinions are like Assholes. Everybody has one, and yours
is hanging out in the open, when it comes to K1MAN. You
had better pull up your pants, before you become the
laughing stock, if you aren't already. You had better read
up on the Holegergenski case and petitions, before you make
yourself look even stupider than you are now. And when
were you given permission to trim newsgroups? You should
spend more of your time studying to upgrade from that
no-code tech license you have held for years.

Hardly embellished; Hans has his citation.

What, might I gently ask, have you done for this country? One doesn't
progress beyond E-7 by being a bullsh*t artist, you know .... :))

Perhaps you'd care to share your expertise in communications.

If one knows theory and regulations and is not simply trying to memorize Q&As, then there should be no problem. I let my tickets expire around 1981 and simply retook the exams in 1993 without any study. This included 20 word per minute CW (last copied in 1969). I regained my extra class license (I believe I was down there nearly 3 hours) as well as my GROL (no 1st phone anymore, unfortunately).

Just make sure your partner knows the basic rules of operating, the different emission types, and the band limits and your partner should be fine. One doesn't need to score 100% (nor even 80%, come to think of it). Nothing very difficult on the tech exam.

Hello, Len

Amateur radio policy is *devoid* of politics? ROTFLMAO.

The Repooblican party, big business, and frequency allocations have quite a bit of politics involved, my friend.

What a crock. According to the FCC letters, this guy is a walking violation. If
someone plays by the rules, no petition will deny them renewal.

I saw a headline that some private developer wants to use the new
ruling
to get some private property eminent-domained so he can build on it.
The
land currently belongs to one of the Supremes (and I don't mean the
singers)

see: www.fark.com

(very good site, btw)

Of course I could be wrong. When she carpetbagged to New York State I
was
sure there was no way she could get elected.

But ya gotta ask - is HRC the best the Dems can do for 2008? Sheesh!

(then again, look at what the 'pubs have offered us....)

At least so far as frequency allocations are concerned.

> I'm glad you have enjoy 'lil Abner in the past.

One wonders if it could be done today. Moonbeam McSwine, Stupefyin'
Jones, and my personal favorite, Appassionata Von Climax.

I heard the Broadway soundtrack album as a kid many, many times.

> I always loved that strip.
> What's good for ..... LOL

Art imitates life.

Panfried shmoos, anyone?

Then there was Pogo....

> Fortunately, in this country we are free to disagree, rather than being

At least for now, anyway.

> As to the Democrats, I hate to admit it but you just may have hit the nail
> on the head. Point well taken :)

The sad part of it for me is that Bill Clinton was perhaps the biggest
factor in all of it. Normally an incumbent VP should have won in a
walk, but Bill's misbehavior in office forced Algore to lose all
coattails. Which set the stage for Shrub to win.

It is NOT the "opinionated" part that is a problem Toad....Its his pure and
simple
attitude. If he would not be such a pain in everyones butt and act like a
normal
human being he would not have all these problems. But its too late now, he
has
so many folks ill at him, he ain't got a prayer of pulling out of the power
dive he is
in.

A bulletin is a short, to the point transmission of interest to the Amateur
community.
Not a 45 minute talk show of off the wall opinions from the Blapster, phone
calls
that he taped and is replaying (illegally I might add....where is the beep?)
And especially
not 18 year old re-runs of Wayne Green and talks from the Dayton Hamfest of
1986.

Lets not even mention his calling Riley Hollingsworth names and slandering
his fellow
Amateurs. Blapster is a total and complete piece of crap. And all this he
has brought
on his self.

Wait a minute Toad, get your comments (BS) cooridinated. You say the ARRL
solicits
on its bulletins, now you say they don't. Again Toad you can't have it
both ways. The FACTS are the ARRL DOES NOT SOLICITE ANYTHING ON ITS
BULLETINS. THE ARRL ACTUALLY SENDS BULLETINS NOT SOLICITATIONS FOR CREDIT
CARDS< ETC>> THAT YOUR BUDDY DOES. MAN has had it. Face it.

Poor Toad. When he don't get his way he starts with the cussing and carrying on. Isnt this how you lost your LAST ISP TOAD? I got a jolt for you me boy. I have no friends at the FCC. I am just right and they and you know it.

You don't deserve a ham license let alone one for a broadcast station. We have enough kooks on SW now. Just go bootleg, put it in a mobile for a while, then a ship, then a surf board. Or just go to streaming on the internet. Wake up and smell the roses Toad.

If you want to broadcast, then broadcast. But ham radio is NOT the place to do it. I will guarantee you if I ever hear you doing it, and not crossing your "t" and dotting your "i", I will be all over you like ....well you know the rest of it. Your talking to one with a LOT of experience taking out the idiots. And guess what? Your on the list.

Don't believe me? Ask David Tolassi ex KC1ZQ what happens when you cross me on ham radio.

Be warned.

> group letting their opinions be known.

FCC enforcement is clearly complaint-driven. FCC doesn't put a lot of
resources into scanning the ham bands looking for violations. They
respond to complaints
and reports instead, focusing their limited resources.

> There is a reason that many hams across the nation do not like Mr.
> Baxter. Perhaps they have been interfered with by his broadcasts.
> perhaps they have been served one of his "felony affidavits". Perhaps
> they believe that he is in violation of Amateur Radio regulations, and
> has been so for a very long time.

Or perhaps they realize that his violations set a very bad precedent if
they
are left alone.

Take the control operator issue. FCC says there were times when they
could not
determine how K1MAN was controlled. Clear violation of Part 97 if true
- a station like K1MAN must have a control operator available.

Or the pecuniary interest issue. Another clear violation.

> > There is already a system in place, but it isn't giving them the
> > results they want, so they seek to find ways to take things into their
> > own hands.

The system that is in place depends on complaints to a very large
extent.

Besides, one of the basic rights of Americans is the right to petition
their government.

Now if someone were suggesting any sort of direct illegal action
against Mr. Baxter (vigilanteism), they *would be* taking the law into
their own hands, which is not the right way to deal with the situation
at all.

> How is this "taking into their own hands? The petition has no legal

Listen up guys and gals......since the NAL has been issued.....21K......and since he can't pay it.....and since he must renew in October......and since the fine is not paid.....then the FCC WILL NOT ACT ON HIS RENEWAL APPLICATION. AND THEY WILL NOT ALLOW HIM TO CONTINUE TO OPERATE BEYOND LICENSE EXPATRIATION DATE.

Things have change since Herby.

The thought of Steve as puppetmaster...

Hi!

But then, when he made his "bricks through windows, slashed tires, and terrorized wives" comments, he assured us that it was only "other people" who do such things. He is as pure as the driven snow.

> Hence i take and have always taken precautions and thus Steve has never

: of what is going on in Aruba. Looks like Saggytits Lee,
: terminally information impaired, has fucked up again. He'd
: better hope they don't find out that Saggytits Lee (SLee@houston-
: hunks-com) has links to Islamic terrorists. That is why he's so
: worried about remailers and such, Ol' Saggytits doesn't want to
: be found out.

To quote Woger: Bwa HAHAHAHAHAHAHAHAHAHA!

Woger has the wrong Aruba. Apparently, Woger thinks that the Italians
are in charge of the Caribbean island, when in fact the Dutch are.

The "Aruba server farm" to which the Paranoia Remailer people refer is
located in Italy. It is advertised at the following URL:

http://webfarm.aruba.it/

and the Paranoia Anonymous Remailer operators were stupid enough to
co-locate their servers at that site. Woger was even more stupid and
thought that they were located on the island of Aruba.

The tapping of the Aruba servers has nothing whatsoever to do with what
has happened on the Caribbean island by the same name, but old short guy
Woger is too ignorant to know that. As usual, he loses.

Sigged.

This rule exists more to protect our bands from being taken over
by commercial interests. Can you imagine getting sued for
QRM?

It takes a regional disaster to make that happen, like
earthquakes. Stuff like car accidents is easily taken care
of with cell phones. But a regional disaster may take
out the phone system physically or it gets overloaded.
And many times hams handle the lower priority "health and
welfare" traffic to free up the police and fire comms
for the more important stuff.

> cellular telephone radio handsets.

CBs are sometimes useful, but cell phones without the phone
system are useless. They can only talk to a tower, not to
other cell phones. (Not sure of those "walkie talkie" feature
some cell providers supply, but that might require the cell
tower to function as a repeater).

>

That may figure into it, but I was there and Hans did provide the
communications. Anyone can spin any way they wish, but it won't affect me.
I know. I was there.
```

Bullshit well spun .... well, I can still QLF faster than a lot of folks can copy .... :))

Not that this is terribly important. I always enjoy hearing the folks with the naysaying. It cost my former employer fairly big time. Sigh ... you'd think that they would have understood when I did a project 25 years ago .... well, I did the thing again and when the plant was going to close, I simply kept it to myself. No big deal as I developed it on my time on my computer on my legal software at home :))

The problem is that if this situation is repeated many tens of thousands of times, it could be a possible problem. It may well be; I don't concern myself with that. I worry about folks that worry about others. To the selfish, I have no obligation.

You do remind me, however, that I should finish the thing and offer it to a Japanese outfit for $1.00 since everyone at the former employer wanted to steal everything from me. Two $25.00 Wegman's certificates for the code I wrote to generate printer legends? And they put it on the Mexican lines? And not on the American lines? Code I largely wrote at home?

I did have to laugh, however. One time I showed them how to shave over 1/2 second off cycle times (and improved that by another .7 second with mechanical adjustments - no increase in mechanical speed) and they went and tried to apply it to several other machines. They spent tens of thousands - only to get little or no improvement. I could have told them that, but I guess the young and anxious can win the arguements.

However, age and treachery will win in the end :)))

Fasten your seatbelts, it's going to be a bumpy ride LOL.

73 from Rochester, NY
Jim AA2QA

We've had a good relationship with the local press. Always make a press release (often two - one several weeks before the event, and one the week before) And we always greet them warmly and give them a good tour. If we make it a pleasant experience, they are more likely to come back. I know that sounds strange when talking about reporters - but not all are investigative reporters. Those doing local and human interest are usually looking for something good to write.

Hehe. I can just imagine. But that is how news stories work out. We don't have much control over the situation. Who knows what makes them choose the pictures they print...

this is k1man's chance at fame and fortune

i wonder if he will be available for interview by larry king, jay leno
and the rest

i think it would be great to hire him as a dj on a pirate radio
station, perhaps even england's pirate network would like him for
guest appearances

freebanders should book him to speak at their meetings

he is doomed to being recorded a new robinhood in history, we have
watched a star born

>Oh NO !!!!! You just shot YOUR and MANs MAJOR excuse for being a boy
>broadcaster being all right and above board. Hardy har har.

The fact is dan is that it's true, read some past warning letters, The
publishing of a schedule doesn't not give you an excuse to transmit
on-top of someone. I guess dan I can read it a little better because I
don't let my emotions get involved.

>A bulletin is a short, to the point transmission of interest to the Amateur
>community. Not a 45 minute talk show of off the wall opinions from the Blapster, phone
>calls that he taped and is replaying (illegally I might add....where is the beep?)
>And especially not 18 year old re-runs of Wayne Green and talks from the Dayton Hamfest of
>1986. Lets not even mention his calling Riley Hollingsworth names and slandering
>his fellow Amateurs. Blapster is a total and complete piece of crap. And all this he
>has brought on his self.

Not true, A bulletin does not have to be short, the FCC has stated that
repeatedly that a bulletin doesn't have to be short. As a matter of
fact The FCC rules state after a certain amount of time a station can
be compensated (see Below)

97.113 Prohibited transmissions.

d) The control operator of a club station may accept compensation for
the periods of time when the station is transmitting telegraphy
practice or information bulletins, provided that the station transmits
such telegraphy practice and bulletins for at least 40 hours per week;
schedules operations on at least six amateur service MF and HF bands
using reasonable measures to maximize coverage; where the schedule of
normal operating times and frequencies is published at least 30 days in
advance of the actual transmissions; and where the control operator
does not accept any direct or indirect compensation for any other
service as a control operator.

So a club station running an information bulletin 40 hours a week
(that's 8 hours a day) can be compensated. So between that and he FCC
repeatly stating there is no time limit on information bulletins i
would say that Information bulletins aren't short. As for content the
content has to be amateur related and really the FCC can't really
control the content of the station transmitting it (see below)

Sec. 326. Censorship

Nothing in this chapter shall be understood or construed to give
the Commission the power of censorship over the radio communications or

signals transmitted by any radio station, and no regulation or condition shall be promulgated or fixed by the Commission which shall interfere
with the right of free speech by means of radio communication.

(June 19, 1934, ch. 652, title III, Sec. 326, 48 Stat. 1091; June 25, 1948, ch. 645, Sec. 21, 62 Stat. 862.)

Amendments

1948--Act June 25, 1948, repealed last sentence relating to use of indecent language. See section 1464 of Title 18, Crimes and Criminal Procedure.

Effective Date of 1948 Amendment

Amendment by act June 25, 1948, effective as of Sept. 1, 1948, see section 20 of that act.

>Wait a minute Toad, get your comments (BS) cooridinated. You say the ARRL
>solicits on its bulletins, now you say they don't. Again Toad you can't have it
>both ways. The FACTS are the ARRL DOES NOT SOLICITE ANYTHING ON ITS
>BULLETINS. THE ARRL ACTUALLY SENDS BULLETINS NOT SOLICITATIONS FOR CREDIT
>CARDS< ETC>> THAT YOUR BUDDY DOES. MAN has had it. Face it.

I never said they didn't my main pea was that the rules state a station can not make money direct or indirect, except for the rule That I meantioned above, the point is to be allowed to get compensation as a club station, what consitutes as a club station members, having a club callsign? There is a lot of questions that need to be answered. the rule of thumb has always been a club had to be a certain amount of people, which I believe has to b more then three. The next thing is, Is the FCC telling that club station how they are to be compensated? and if so where in the FCC rules does it state the procdures of an amateur station to be compensated.

>Poor Toad. When he don't get his way he starts with the cussing and
>carrying on. Isnt this how you lost your LAST ISP TOAD? I got a jolt for

>have enough kooks on SW now. Just go bootleg, put it in a mobile for a
>while, then a ship, then a surf board. Or just go to streaming on the
>internet. Wake up and smell the roses Toad.

Thank good you don't work for the FCC or no one would get a license. Coming from someone who has been in trouble with the FCC before I'll take tht as a compliment. As for streaming, First there are too many people steaming this causes a hugh diversity, to big of a diversity. secondly until Internet 2 comes out to the commercial services, right now the government and universities have it, and everyones on it

internet radio and television will be second rate. Finally until
Internet radio and Television is considered a broadcast some of the
content owners wouldn't even mess with you. I've tried, I tried to
start a Internet TV station and asked content owners permission to use
their content and their view is unless your a BROADCASTER they won't
mess with you. This is what slowing internet TV down.

>If you want to broadcast, then broadcast. But ham radio is NOT the place

> as that gut of yours in the QRZ photo.
>

Interesting how you can derive prejudice from a simple question.

I honestly wanted to know why, in a VHF/UHF contest, I wasn't contacting more Techs since they are "trapped above 30MHz by the code test" as some would have us believe. When Technicians are nearly half of all licensed hams, why were they only about 5% of my contacts? Extra's are only about 16% of the total and yet they were about 90% of the contacts.

Those who maintain that the Techs are "trapped" are creating a self-fulfilling prophecy by convincing the Techs that they are not capable of passing code. In the long term, that is an approach that harms amateur radio. Even if the code test is someday eliminated, it is wrong to gain support for it by convincing people that they are not capable of passing it. This can and will prevent people from attempting to pursue learning this aspect of ham radio.

Every ham at every level should be encouraged to believe in their ABILITY to master any and all of the elements even if the element is not a required one. Whether they choose to pursue it is a different issue but we should encourage them to believe in themselves and not tear down their self esteem. Yet we have some people maintaining that the code should be dropped because some people "can't learn it and are trapped above 30MHz." By maintaining this attitude they are the ones putting down the Techs and showing their prejudices. They would trample on other's self esteem to obtain their objectives.

>being for that long.

A lot better then I can type.

> "Opinionated" is editorializing...NOT reporting.
> An "information bulletin" passes INFORMATION that is pertinent to
>the operation of the radio station...Not subjective opinion.

Stebie, if the FCC wanted Information bulletins to be just a newscast
then they have the power to put it in the rules, but it's not in the
rules. The FCC has the power to specify what is allowed and what isn't,
they've always had that power.

> Then how come you're ranting and raving in support of GB? The
>FCC's doing EXACTLY what you suggest, Todd...

Not really, Information bulletins has always been a grey area, and
perhaps K1MAN can help eliminate some of these "grey areas"

>Huh?

The FCC has the power to clairfy a rule provided it is the least
restricted mean necessary to substantiate govenment interest the
problem is that when it comes to content control the FCC tends to tread
lightly, because they are limited/prohibited to control the content of
any station (see Below)

Sec. 326. Censorship

Nothing in this chapter shall be understood or construed to give
the
Commission the power of censorship over the radio communications or
signals transmitted by any radio station, and no regulation or
condition
shall be promulgated or fixed by the Commission which shall interfere
with the right of free speech by means of radio communication.

(June 19, 1934, ch. 652, title III, Sec. 326, 48 Stat. 1091; June 25,
1948, ch. 645, Sec. 21, 62 Stat. 862.)

Amendments

1948--Act June 25, 1948, repealed last sentence relating to use of
indecent language. See section 1464 of Title 18, Crimes and Criminal
Procedure.

Effective Date of 1948 Amendment

Amendment by act June 25, 1948, effective as of Sept. 1, 1948, see section 20 of that act.

So Stebie the FCC better watch were they step.

>There's no "direct" or "indirect" to it. Glennie overtly solicits
>sales on his broadcasts.

>Now he's busted.

Yeah there is, I'm not going to comment on it except to read my reply to W4NTI in this thread, I'm not going to rewrite it all here.

> But do you think for a minute, Todd, that Mr Loria would issue a
>document demanding that a citizen part with $21K without consulting
>with Washington first?
> And please note that the TOP line says "FEDERAL COMMUNICATIONS
>COMMISSION"...Not "The Boston Branch of the FCC"...

The FCC District office of the enforcement does have that power, I think my point was there is a LOOOOONG pocess to go and a NAL i s not a final ORDER. Final Orders can be appealed to the US Court of Appeal.

>You wouldn't need a "waiver" if you'd just do it right the first
>time.
Which show steve you nothing of the application and waivering process. Anyone may file a waiver of the rules if good cause is shown at anytime, and yes this also applies to amateur radio.

>Quit your whining and hire a REPUTABLE communications attorney to
>help you. You're obviously grossly overwhelmed when it comes to
>administrative matters. Let him do it for you.

Steve. despite what you and your asshole buddy Phil think on here, an broadcast application is very easy to fill out the problem is according to the FCC I didn't file during a filing window, unfortunately Waiver don't have filing windows as stated above they can be filed at anytime. A person (like ME) can also waiver the filing window.

>The application will be a lot more impressive without the crayons
>and "Beefaroni" stains above the signature of non-existant
>corporations.

It's club ASSHOLE!!

ok then, explain the "felony afidavits" that k1man sent out. you want to
talk about maliciousness and vigilantism, there you go.

The problem is, you attempted to divert the point from the thread.

>
> There is already a system in place, but it isn't giving them the

huh?
ever hear of bureaucratic inertia?
besides, the petition is just an alternate means to the same end (and its
valid under fcc procedures).

>
> That is the path to anarchy. That is the path chosen by fools.

step in line....

>How will you know what is decided?

That is the simplest task of all.

Should you choose Option 2, it will be immediately apparent to all.

Should you continue down the current path, then you have chosen to
remail with Option 1. Equally apparent to all.

You must decide!

>>
>> >
>> >How would such a choice be demonstrated in concrete, practical > >terms?

That the numbers will be lobesided is obvious Tech as a class less
experncedoperators and likely to have less time in etc. therefore they
are likely to have stations less well equiped.

I will now add some coment of MY thoughts and experences

Frankly contest opperating has little appleal to me, I do Field Day
fairly often which kida exhausts my level of interest in contesting

Further I rarely hear of VHFor UHF contest till about a week after they
happen
>
> Those who maintain that the Techs are "trapped" are creating a
> self-fulfilling prophecy by convincing the Techs that they are not capable

Now where is this from? Not capple? well I am not (5 years of trying
for a Novice license in the 70's basicaly convinced me, maybe if I
beged for enough accomdation I could manage a receieve only test by why
should I?)

But No one is arguing that Tech can't learn code, some do and some will
even after the code test is history, It is a burden that isn't waranted
by the value of Morse Code

> of passing code. In the long term, that is an approach that harms amateur
> radio. Even if the code test is someday eliminated, it is wrong to gain
> support for it by convincing people that they are not capable of passing it.

Red herring

> This can and will prevent people from attempting to pursue learning this
> aspect of ham radio.

Personally I hope so as I believe it is a mode that should be laid to
rest
>
> Every ham at every level should be encouraged to believe in their ABILITY to

Why? and what is your point, since noone but you is saying that techs
can't

> master any and all of the elements even if the element is not a required
> one. Whether they choose to pursue it is a different issue but we should
> encourage them to believe in themselves and not tear down their self esteem.
> Yet we have some people maintaining that the code should be dropped because
> some people "can't learn it and are trapped above 30MHz." By maintaining

And some folks are 5 years taking a test a every week or two and
practiceing half and per day 5 days a week (study hall) did not mange
it isn't likely any levl of effort would achieve results today

> this attitude they are the ones putting down the Techs and showing their
> prejudices. They would trample on other's self esteem to obtain their
> objectives.

Frankly doesn't look like you are reading closely

What "gut"..?!?! You continue to inist that there's a "gut" yet
in doing so you only substantiate my claim that Brian P Burke is a
chronic liar.

Do you lie like this to your wife? Your kids? Your employer?
Your Scouts?

As for the Techs issue, it must be a North Of The Mason-Dixon
thing because I continue to "work" NCT's on a daily basis.

Nope.

It really is up to YOU to "make something" of YOUR religion.

> > Personally, there's nothing there to make of, in my opinion.
>

> Then why did YOU start a thread trying to make an issue of it?

I didn't.

I simply stated that you are a gay pagan. You've said so
yourself.

I said NOTHING of paganism itself.

You're an idiot, actually.

You have a problem that everyone who's ever engaged you in a
public discussion has asked you to please do something about, but you
insist on foisting your problems on everyone else.

Spell checking programs are a dime a dozen. If nothing else, you
could cut-and-paste your responses from any of the "Word" programs then
paste them to the relative thread.

I just think you LIKE looking like an idiot.

> Indeed you are since you are Sadistic, but can't admit it

Why would I admit to being something I am not, Mark?

Now I WOULD admit to being a bit Masochistic, if for no other
reason than (a) participating in this forum with known liars and
deceivers like you, Todd, Brian Burke and Lennie Anderson and (b)
trying to glean coherent content from your "writings".

I don't know which is worse...the headache from trying to read
your "dreck", or the sore throat from laughing so hard!

> final ORDER. Final Orders can be appealed to the US Court of Appeal.

So can that NAL.

But Baxter's pushed all the wrong buttons for too long.

Here's my take...He's going to file for his renewal. The FCC says
"sorry, you've got a pending NAL...".

After the first hearing, Baxter's going to realize that the FCC
isn't joking and that they have far greater resources to persue this in
court.

He'll make a deal with the FCC that if they renew his license,
he'll take a five year suspension...Either that or he'll take a limited
suspension in which he's forbidden to operate on HF or to make one-way
transmissions of any nature.

> >You wouldn't need a "waiver" if you'd just do it right the first
> >time.
>
> Which show steve you nothing of the application and waivering process.
> Anyone may file a waiver of the rules if good cause is shown at
> anytime, and yes this also applies to amateur radio.

Sure it does.

But the FCC said you don't meet licensing criteria.

I am sure mumsie and popsies have given you everything you want
when you want it, Todd, but the real world isn't about to tolerate a
spoiled brat easily.

I doubt that we're getting all the story here, but I am willing to
bet that the bottom line is that YOU failed to meet licensing criteria,
hence no license.

Maybe it's your frequent use of fake last names or that you
represent yourself to be the "CEO" of a non-existant corporation. Or
maybe you just said "FO" one time too many to the wrong person and they
put a little black star next to your name!

Who knows. Who cares. All I can say is that having seen what
kind of person you really are in THIS forum, the people of Taylorville
have been well served by the FCC in it's refusal to license you in any
broadcast service.

> >Quit your whining and hire a REPUTABLE communications attorney to

> A person (like ME) can also waiver the filing window.

I know what the application is like, Todd. I took a look when I
read all this crap from you in the first place.

And despite how hard you try to convince everyone what a brilliant
communications lawyer YOU are, that lawyer you're NOT paying COULD push
all the right legal buttons and get you what you want.

Thank God (or the deity of your choice) that you're too stubborn.

> >The application will be a lot more impressive without the crayons
> >and "Beefaroni" stains above the signature of non-existant

No...

What it proves is that you aren't able to follow instructions.

Yet another good reason why you shou;dn't be allowed to have a
broadcast license.

> (UNSNIP)...like yourself.

Wrong again.

> but hey that's ok, I've got the amateur bands and I'll use them.

For now.

But you're already well on your way to screwing that up too, so I
look forward to a day when we see an NAL with your name and callsign on
it, Todd.

That's called trolling. You're saying I should not respond to Len's
trolls. In other words, you suggest that I shut up. But you can't bring
yourself to write clearly and plainly, choosing to gussy up your words
with psychobabble.

What you fail to notice is that Len dances at the ends of others'
strings far more. And that while I write the truth, he inserts mistakes
(intentional or otherwise) to bait others into responding.

Look at the number of posts I have made in this thread. Or other
threads. Compare to the number made in response to me.

There's also the organ grinder's red-hatted monkey who will do almost
anything for attention. Including misquotes of others.

Now you'll say that's not the point. And perhaps in your fantasy, it
isn't.

I expect some percentage will be not all. Just as there is only a small
percentage of Generals, Advanced, and Extras who are interested in
contesting. However one would expect the largest group of licensees to be
the largest group represented in the frequency bands where that group has

full privileges.

>>
>> I honestly wanted to know why, in a VHF/UHF contest, I wasn't contacting

> happen

That's simply because you are not interested in contests. Again not a
problem. For those who are interested, they are published well in advance
on various websites.

>>

>

That basically proves my subsequent arguments that you have been incorrectly
convinced you are not capable. It is dependent on the training approach.
Way too many people have been subjected to incorrect training methods and/or
poor teachers.

>
> But No one is arguing that Tech can't learn code, some do and some will

That's a matter of opinion only. However if the majority of hams
EXPERIENCED in the mode were to support dropping it, I would accept that.
It is only objectionable when the inexperienced try to rationalize why it
should be dropped.

>

I have always said that they can learn it. Just check the archives. It has
not been me saying they aren't capable.

We should encourage people to believe in themselves so that they can be the
best they can be regardless of whether it is ham radio or something else.

>> master any and all of the elements even if the element is not a required

Wrong training method and/or bad teacher. It is as simple as that. Correct training methods and a proper teacher do produce results.

>> this attitude they are the ones putting down the Techs and showing their
>> prejudices. They would trample on other's self esteem to obtain their
>> objectives.
>
> Frankly doesn't look like you are reading closely
>

I'm reading very closely. It is those who advocate the removal of the test who promulgate the concept that some people "can't" learn code. If they would just be honest and say they don't want to learn the code, I'd respect that but not agree with dropping it.

Probably becuase the question often gets answers that are not in line
with other people's prejudices.

Most Technicians are doing exactly what they want. Some are satisfied with getting on the local repeater, some are helping with public service and event support, which again is either 2m simplex or repeater work.

Those who want to upgrade, do upgrade.

> Those who maintain that the Techs are "trapped" are creating a
> self-fulfilling prophecy by convincing the Techs that they are not capable
> of passing code.

Frankly I doubt too many Techs are convinced by that sort of argument.

The only people (with one exception) who are trapped are those who for some reason allow themselves to be. The exception is those very, very few who for some reason are truly incapable. BUt that number is vanishingly small.

> Every ham at every level should be encouraged to believe in their ABILITY to

> some people "can't learn it and are trapped above 30MHz." By maintaining
> this attitude they are the ones putting down the Techs and showing their
> prejudices.

Some people cannot pass the written tests either. Does not being able to pass the General test also trap you above 30 MHz? Not passing the Extra trap you out of the Extra segments?

Does not being able to pass the Technician test trap you out of Amateur radio? If I don't want to learn the satellite operation questions, is that an unfair thing, and should those questions be removed so I don't have to learn the answers to those questions?

Those who would have the Technicians be the "oppressed victims" do hate those questions.

> They would trample on other's self esteem to obtain their
> objectives.

Correct! If a person hates Morse code, that is fine. It's a free country. But The concept of people being "trapped" above 30 MHz is a sympathy ploy that has no relation to the reality of people wanting more priveliges, and doing what is needed to get them.

I had some people telling me to wait to get my General, because the Morse code requirement is going away "any day now". That was in 1999. Just about 6 years ago. I guess it was a good thing I didn't listen to them! 8^)

But that is the tale I give the new guys who are interested in upgrading. Don't wait. Learn what you need to learn. If the requirement goes away, all you will have lost is the time spent learning Morse, and

you will have traded that time for some skill and knowledge. Then I ask if 6 years of not being on HF is worth *not* learning Morse code.

Message-ID: <d9u52v$17v8$1@f04n12.cac.psu.edu>
Source record: 111229

What is more important:

1. Having a license that allows HF access.

2. Not having to learn Morse code.

IOW, is standing on principle, and refusing to learn Morse code a better thing than learning it to get the priveliges?

No steve what you don't understand is the FCC area bunch of scumbags who go to the federal courts claiming that all a person has to do is apply for a license and a waiver, and when some one does it (and by the way I'm NOT the only one that has done it) the FCC wouldn't time the fucking time to even look at the application or waiver. The FCC DOES NOT SERVE THE PUBLIC INTREST, the only interest the FCC serves is the BIG companies. That's all I really have to say because in my opinion your nothing but a waste of space, a sadist control freak, with a god complex.

no, if standing on principle keeps you unlicensed and hence an 'outsider'
when you could easily learn it enough to get a license and then be an
'insider' it is not better. sometimes it is better to bend to the
requirements and gain status so you can work on changes from the inside than
to try to force an organization to relax the requirements and let you in...
and then consider you forever a whiner.

and then again, you don't 'have' to learn morse code. it is purely
voluntary, you actually only get a very small gain in spectrum going from
tech to general. you can 'work the world' on vhf via moon bounce,
satellites, meteor scatter, and other vhf modes. and there is always 11m...
or if you really want to be heard around the world pay a few bucks and use
any of the many 50kw shortwave broadcast stations that are begging for
programming.

The station cannot be compensated, but the club can compensate an operator for
their work. Otherwise ARRL could not pay the operator at W1AW.

Don't believe Zenith ever made a 6V farm 'cathedral' style radio. The
model 250 had four bands, went to 18Mc, but was 110VAC. They made a few
'tombstone' style 6V farm sets with several sw bands.

Mike,

First let me state again for the record, the issue for myself
and for No Code (test) International is morse code TEST
opposition...not any "hatrid" of hams learning and using morse.

With that clarification, my answer to your question is... IMHO,
if anyone wants HF access, they should learn morse now to get
their General rather than wait for any FCC changes.

Cheers,
Bill K2UNK, Director NCI

Mike,

Maybe I'm disqualified from answering the question, not being a "Morse code Hater", but humor me.

I knew Morse code for several years before I was interested in becoming an Amateur Radio licensee....

....but if I hadn't known it I'm pretty sure that I wouldn't have gone to the trouble to learn it just to get an Amateur Radio license.

All that you need prehaps. since you need none at all I am sure you
have that
but you don't back it up for anyone else. You don't use our own word
you make stuff up, or you distort the context, or at best you start
assume, and if you were ever a maraine you know what ASSuME means

Now I will never try to stop you from making an ASS of yourself, that
is your right, but you don't have the right to make others make the
trip with you

Amateur radio in the USA cannot provide communications for pecuniary
interest.

> Amateur radio
> regulations even state that amateur communications themselves
> are to be of a trivial nature and amateurs themselves are
> supposed to avail themselves of commercial communications
> services for non-trivial communications.

Where does it say that in Part 97, Len?

> Amateur radio in the USA is NOT a "national service."

That is correct, Len.

Amateur radio is international.

> All
> throughout Title 47 C.F.R. the word "service" is a regulatory
> term denoting a type and kind of radio activity being regulated.

That is correct, Len.

> Is the Citizens Band Radio SERVICE a "national service?" No.
> Is the Amateur Radio Service a "national service?" No.

> There's a difference between words used "de jure" (by law as
> stated) and "de facto" (what it really is in practice).

That is correct, Len.

> Amateur
> radio is a HOBBY...a recreational pursuit done for personal
> pleasure, federally regulated only because of the physical nature
> of radio wave propagation and possible interference with other
> radio users. DE FACTO a HOBBY.

That is incomplete, Len. There are aspects of amateur radio that
go beyond the word "hobby". Unless you would also call volunteer
firefighters "hobbyists".

> >"...I know that when a natural disaster hits, they're [cell towers]
> >the first ones to go down. And the few that are remaining are jammed
> >and you can't get access."

> Hollingsworth is "playing to his audience" (to use a show business
> phrase).

That's you opinion, Len. Where you at Dayton when he spoke?

> Physically, the cellular telephone services, an adjunct to the
> wired telephone infrastructure, does NOT "go down" either "first"
> or last.

That is incomplete, Len.

The term "go down" means to be unavailable, be it for reasons of
physical damage or overloading by too many simultaneous attempted
calls.

> TELEPHONE communications is "jammed" only by too many
> panic-stricken subscribers trying to use it simultaneously at the
> onset of some emergency. The TELEPHONE infrastructure would not
> have survived as a communications service provider if "all"
> subscribers were free to use it simultaneously.

That is correct, Len.

> >" The people who are going to be taking care
> >of the real communications are sitting right here in this room. It's

> radios which can, and have, been used for two-way communications.
> That is NOT counting CB or the approximately 100 million
> cellular telephone radio handsets.

That is correct, Len. But it does not contradict what Mr. Hollingsworth
said.

> Eleven and a half years ago, during the Northridge Earthquake in
> Los Angeles, NO amateur radio "emergency communications" were
> working in the first hours of the earthquake-induced TOTAL AC
> POWER OUTAGE.

How do you know, Len?

Were you able to visit every amateur in the affected area and determine
that none of them were involved in emergency communications?

> Public safety and utility radio services were
> on the air and working despite the total electrical mains supply
> being OFF. It took at least six hours for the Los Angeles area
> power to BEGIN to be restored to subscribers on that necessary
> BLACK START.

How long did it take before all, or nearly all, customers had their
electricity back?

> Public safety and utility radios continued to
> function, police and fire and paramedics rolled on calls,
> hospitals were there with their own electric power and serving
> patients. TEN MILLION residents were affected by that quake
> and total power outage.

For how long?

What was the extent of the physical damage?

You seem to be saying that you could not see amateur radio playing an
important role in emergency communications during one particular
emergency. Based on that one emergency, you think that amateur radio
plays no important role in emergency communications during any
emergency.

Is that correct, Len?

> Hollingsworth is a special counsel to the Enforcement Bureau's
> Spectral enforcers.

That is correct, Len.

> He should KNOW BETTER than to perpetuate
> such myths as he stated.

That's your opinion.

> But, Hollingsworth does NOT
> specifically speak FOR amateur radio. He is little more than
> a "radio cop in a suit."

Perhaps you would like to address those comments to him?

> >"There was a big newspaper chain that had a reporter with headphones on

> >bands."
> >
> >On the American 'phone subbands. Not CW/data subbands...
>
> Oh, my, another MYTH.

That is not correct, Len.

The tapes described are of voice operations. Not Morse Code operations.
Not digital/data operations. Voice only.

> Simon Pure morseman "does not swear with
> morse code!"

That is correct, Len.

Can you cite any instances to the contrary? Any examples of FCC
enforcement
for content violations by amateurs using Morse Code?

In the past decade or so, I know of *one* NAL for an amateur using Morse Code. The amateur in question was transmitting Bible verses "24/7" in Morse Code on the 40 meter band, as "code practice". But he did not reply to questions from the FCC about how the station was controlled. The NAL was for improper station control and failure to reply, not for the content of the transmissions.

> He is "safe to be around the children?"

In 38 years of amateur radio, all of the Morse Code amateur radio transmissions I have heard had perfectly acceptable content for all ages. None of them were an embarrassment for the Amateur Radio Service.

The same cannot be said for what I have heard of voice amateur radio transmissions.

As an active radio amateur for almost four decades, I've heard a *lot* of amateur radio transmissions - more Morse Code than voice.

>
> [how many children did you say you "parented?"]

I didn't say how many, Len. How many did you say you "parented"?

> >"It puts them in a very difficult position when they have to defend
> >examples of conduct that other countries hear."
>
> All those "75 and 20 Meters" radiotelephone users were
> CODE TESTED (or had the equivalent of same).

That is correct, Len.

They were also written tested on the requlations.
>
> The CODE TEST does NOT prevent verbal abuse via radio.

Not in 100% of cases, Len. Neither does the written test.

However, it is a fact that enforcement actions by FCC for "verbal abuse via radio" are practically all about amateurs using voice modes, not Morse Code. The ratio is far beyond what the relative popularity of the modes would predict.
>
> >Should be "'nuff said".....

But your analogy is false if you don't wish to learn about satelite
operation then don't it will not keep you from passing the test.
Perfect score is NOT required in order to pass

I don't claim to have plotted it but I beleive you even choose not to
learn the rules of the ARS and still pass the test. (not that I would
recmend such a course)

Futher No one has suggested removing from the question pools all
content regarding Morse Encoded CW, but the current state of affairs
make Morse encoded CW more important than all of the rest of Ham radio,
something that is clearly not the case and unfairly enhances the
previldges of those to whom it comes more easily

An alterenitve would of course be to discuss wether or not the ARS
would be better off with a fee based license sructure, with the fees
reservsed for ARS enforcement. Not sure I endorse the idea fully but I
do think it has enough merit to discuss, or even asome from of mixed
system of fees or tests and fees or just tests with the pathways
choosen by each of us I think that has ral merit but I doubt the FCC
would ever go for it,

But it does seem forbidden to even discuss something like that

false again. it is not a matter of sympathy but of law, the
constitution, rights, all those little thing that get in the of petty
(or grand) tyrants

Certainly is I spent 5 years on it that was a waste and in those it
kept you off HF and VHF and.... I traded my time for nothing

Indeed the Tale I tell is decide if you want HF, and then give morse
code a try, and if you try good luck with it, but please don't let
yourself get down about it.

Gee, Jim, d'ya suppose we oughta petition FCC to require Morse tests to qualify
for a cell phone number? Ya never know when it might come in handy, huh?

| and then again, you don't 'have' to learn morse code. it is purely
| voluntary, you actually only get a very small gain in spectrum going from
| tech to general.

Certainly the total bandwidth gained is relatively small (compared to
what techs already have), but the bands you do gain access to are
quite special.

| you can 'work the world' on vhf via moon bounce, satellites, meteor
| scatter, and other vhf modes.

Perhaps, but HF is certainly an easier way of `working the world', and
probably more reliable. And there's probably a lot more people to
talk to.

| and there is always 11m...

You are aware that FCC regulations prohibit talking to somebody on a
CB that's over 250 miles away, right? (Of course, I'm talking about
the US here -- I don't know much about the laws elsewhere.)

Personally, I had a hard time learning morse code, and learned just
enough to barely pass the test. But I did pass, and now I can use the
HF bands. I'd like to learn morse code better -- not so much because
I want to use it, but just because it would be nice to understand CW
when I hear it (like from repeaters IDing themselves) at full speed.
But I've got a lot of things I'd like to learn, so maybe someday.
Maybe not.

Waiting for the code test to go away to get HF privs kinda reminds me
of my old uncle who until the day he passed away ten or so years ago
was still waiting for his Pennsylvania Railroad stock go back up and
he'd make a wad.

Jim Hampton, you didn't see the obvious ERROR committed by
another...or the correction issued on it?

The "U.S. delegation" to the World Radio Conferences IS the FCC
and it IS the NTIA and it IS the Department of State. All three.
Not just the WRCs but the North and South Americas' conferences.

The radio frequency recommendations reached on international
agreement cover 9 KHz on up to 300 GHz. The HF band is a drop in
the bucket compared to all that spectrum.

>> >person.

Ain't that cute...sneak in some PERSONAL POLITICAL idea into
an amateur radio policy group. Fat lot of good that does.

Does Hillary Clinton have a HAM LICENSE? No.

Is the DNC (Democratic National Party) concerned with amateur radio?
No. Neither is the GOP, the Republicans.

>Hello, Len
>
>Amateur radio policy is *devoid* of politics? ROTFLMAO.

Do NOT put words in my posts that I didn't write.

Did I say that amateur radio policy is "devoid" of anything
(except some ignorant, biased nonsense of some of its
participants)?

AMERICAN NATIONAL POLITICAL matters do NOT belong in here.

>The Repooblican party, big business, and frequency allocations have quite a
>bit of politics involved, my friend.

Neither the Republicans nor Democrats matter to/from amateur radio.

"Big business" fairly well GAVE UP on using the HF spectrum except
for some RFID purposes at 13 MHz. "Shortwave broadcasting" is NOT
in the category of "big business."

FREQUENCY ALLOCATIONS on an international scale DO NOT INVOLVE
AMERICAN POLITICAL PARTY actions or policies.

Try to learn to differentiate between political parties in the
USA and on the INTERNATIONAL SCENE where HF use is decided...
along with MF, LF, VLF, ELF, VHF, UHf, and microwave bands.

Let me know when Rudy Guiliani and Hillary Clinton get ham
licenses, okay? Not to mention ANY of the FCC Commissioners
(who are all appointees by whoever is in power in the USA).

Gospel truth!

Learned Morse off the old 6V farm radio (a "cathedral" style Zenith with 5 or 6 bands --- we didn't get REA until I was in high school) at about age 8 or 9. Wanted to know what all those beeps and boops were about on what turned out to be the 8 and 12 MC marine bands. Fascinating stuff for a kid thousands of miles from any ocean.

Ham radio interest came much later, introduced by my roomate as a college freshman.

Source record: 111252
Cross-posted to: alt.radio.scanner.flame_fest,rec.radio.amateur.policy

Ah, the sig file. In that file I have the following quote:

"Just because YOU don't know how anonymous remailers work, doesn't mean everybody else does, imbecile." -- Secwet Woger in message-id <5a35ee4960f14f45c1d016124d00573c@mail.futureworlds.it>

Notice its point of origin: futureworlds. And futureworlds is also in Italy at a server farm run by http://www.panservice.it (and it's not in Aruba either, Woger). Can you say "Italian police" Woger? Can you connect the dots to the *other* compromised Italian remailers?

You may pretend to have not chosen the Paranoia remailer, but your own message IDs show that you did use Futureworlds. I'll bet that you're in the Interpol data base by now.

And that means your ID info could be just a phone call away for Chief Stenger.

Enjoy.

>
>"resist the drive to respond, even when you know you are in the right"
>= shut up.

That is quite an oversimplification, Jim.

Resisting the temptation to be suckered in to responding to a post
designed with the intent of making you jump would require the
discipline of refusing to respond, and the wisdom to recognize the
need..

Do you have that discipline, Jim? The wisdom?

Can you resist the temptation to respond? Do you possess the inner
strength?

Not so far.

Not in the past - but perhaps in future. Perhaps today!

Decide - Owned or Free.

Polish - or Avoid.

>
>That's what you're telling me to do.
>
>You could just be clear about it. But that's not your way.

It cannot be simplified any further, Jim.

Owned - or Free.

Decide.

>
>> >You're begging the question, Leo.
>>
>> I am begging the answer.
>>
>> Decide!
>
>> >> This is your potential future reality.
>
>Many Happy Returns

Focus, Jim.

Option 1. Or Option 2.

Continue - or Change.

>> >> >> Owned or free.
>
>Yet you quote Caine and the stuff about a man not being silent.

(Forgetting for a moment that Caine was a make-believe person in a TV
show rife with pseudo-wise Eastern philosophical sayings...)

That quote did not apply to your situation.

It referenced 'wrong' in more of a human sense - i.e. someone doing
'wrong' to others. Intervening - i.e. 'correcting the wrong', was to
stop the actions of the perpetrator of said wrong, thereby protecting

the perpetrator (bu getting suckered every time) and the victim (of the resultant bashing). Caine could not help you - he would be too confused.

Your current situation requires a different metaphor:

"A man walking along discovers a turd in the middle of his path. What should he do?

If he is wise, he would step around it and go along his way. But, if he should pick it up and begin polishing it, in the expectation that it would somehow gain value as a result of his effort, he would be quite foolish indeed."

Polish - or Avoid.

Option 1 - or Option 2.

You must decide!

>
>> >> >That's your spin.
>> >>
>> >> That's your opinion.
>> >
>> >Fact.
>>
>> Owned or free - Decide!
>>
>> >
>> >> Owned - or free.
>> >>
>> >> You must decide.
>> >
>> >Why?
>>
>> You must.
>
>Says who?

There is no option.

If you continue on the current path, then you have chosen Option 1.

Things continue as they are.

You remain owned.

If you elect to change, then you have chosen Option 2.

You become free.

You must decide!

>>
>> >> >> The path you choose will be entirely up to you.
>> >> >
>> >> >So there *is* a choice!

>Waiting for the code test to go away to get HF privs kinda reminds me
>of my old uncle who until the day he passed away ten or so years ago
>was still waiting for his Pennsylvania Railroad stock go back up and
>he'd make a wad.

Poor unc...must have listened to his nephew too much. :-)

Tsk, I was ON HF 52 years ago and was still ON HF a year ago
without ever having to know/test for morse code. Legal.
Just not in the MF-HF amateur bands, not even on CB. :-)

"Not in the HF-MF amateur bands" is MOST of the HF-MF spectrum.

Tsk. All you morseodists think that morsemanship is a "love-hate"
condition? Like black versus white? If one doesn't DO it, one
"hates it?" Not so.

You morseodists ought to listen to yourselves sometime. You
prattle on and on and on and on and on about the glory and
majesty of morsemanship and how it is the epitome of all amateur
skills and "all should know this basic thing" as if it were true.
AS IF.

Ain't true, senior. Just rationalizing bullshit or some vestige
of brainwashing soap scum left on your collective psyches by
older olde-fahrts who probably got their "ham" licenses back
when "ham" was a not-nice word from the radio pros. Tsk, tsk.

Would you say that tired old cliche' about "learning morse will
show your dedication and committment to the amateur community?"
I hope not, because that is a tired old cowpatty phrase left
over from before WW2. Who is this "amateur community" that hams
"must" show something to? A bunch of self-glorified, self-promoted
raddio kopps? What's their mailing address? Is it someplace in
Newington?

Now, if morsemanship were SO good in radio, I would have expected at least one OTHER radio service to retain it as their prime communications mode. NONE did. How about that?

If morsemanship were SO good for radio, I'd have expected to see hundreds of thousands of hobbyists flocking to code classes and beeping up a storm. Maybe picketing someplace in favor of morse? Hasn't been so. Without Test Element 1 for the below-30-MHz privilege license...and perhaps some olde-fahrts from long-ago military radio...there hasn't been any groundswell of Getting Morsemanship. How about that?

So, because all you PCTA extras try to make out like radio experts BECAUSE of passing a 20 WPM test, you are wanting Love and Affection and Respect for being sooooo mighty? Tsk. You are looking for "love"
in all the wrong places. Poor babies, unloved and you think all who don't love morsemanship is "hate?" You guys are as whacked out as the Tennessee Talibanian.

Remember, "Morse code gets through when everything else will." - Burke

> That is quite an oversimplification, Jim.

How, Leo?

If I respond to Len in any way, you say I have taken Option 1.
Therefore the only way to take Option 2 is for me to shut up.

All your blathering psychobabble comes down to your trying to tell me
to shut up without using those words.

> Resisting the temptation to be suckered in to responding to a
> post
> designed with the intent of making you jump would require the
> discipline of refusing to respond, and the wisdom to recognize > the need..

Which is what I do, most of the time. Just not all of the time. To
satisfy your criteria for Option 2, I'd have to pretty much stop
posting here.

In fact, it seems to me that perhaps *you* are posting here with the
intent of making me "jump"....
>
> Do you have that discipline, Jim? The wisdom?

Sure. Do you?

I already have demonstrated that, Leo. Do you see me responding to
"each and every taunt and tease"?

Yes or no?

> Do you possess the wisdom to see things as they are, and

How is it an oversimplification? How else would Option 2 be chosen?
What other evidence would convince you that I chose Option 2?

> >> >> >How would such a choice be demonstrated in concrete, practical > >terms?
> >> >>
> >> >> Hmmm - you read the two options, right? :)

>
> That would relieve you of your requirement to think.

I'm simply asking for a definite criteria. You won't provide it,
because you know that Option 2 = shut up

Is there a way I could choose Option 2 and not shut up? If so, the two
are not the same. If not, the two are essentially the same thing.

> >> The options have been spelled out quite clearly above.

What other alternative exists, Leo? The opposite of

"Speak out against incorrect information"

is

"Do not speak out against incorrect information"

> >> >> >What actions do you suggest?

Great idea. Maybe we can attach the railroad sounder to the cell phone and
get those klicks nice and loud.

Actually it is not that bad of an idea. But the anti coders out there will
nix it.

Oh come on people. 5 WPM is just not that hard to do. To keep on waiting
for it to go away and let this keep you from getting into the HF end of the
ham bands is just kind of silly IMO. Life is full of little inconveniences
and you should not let that get in the way of a something that you would
have a good time doing. Little kids can pick this up in a few months if
they want to.

Some of the most fun I have had on the ham bands has been using CW, and I am
not that good at it and I came to it kicking and screaming. It just took a
month or so of a little work.

OK, I will get of the soap box.

Gee.....now I know what MY problem is.....I heard of ham radio. Found out the requirements to get a license. Studied and passed the requirements.

Thanks for the insight Hans.

Translation of Lennies latest rant;

I really wanted a ham ticket. But I wasn't coordinated enough to walk and
chew gum at the same time. That's why I was talking on HF without a "ham"
license.

I dispatched taxi cabs on the old HF links used before FM was discovered.
Had to do something to supplement my meager Army pay you know.

My inability to walk and chew caused me to be unable to learn Morse Code.
So I hate anyone that could/can.

Please feel sorry for me.

Lennie the LOSER

>Focus. Everything is not about Len.
>
>And try to start what you finish. :)

A problem with a wide-angle lens is that everything seems in
the field of view...but proper focussing requires concentration
on the center of the image. Some just don't have the single-
lens REFLEX to do it... [clik......clique]

>>"I am not a number! I am a free man"

Easy route is status quo. No need to fire up brainworks. Every
day the beginning of every other day of the past...except:

"All things are as they were then, except Jim was THERE..."

[apologies to CBS and their old radio show "You Are There"]

I need a better agent. I was getting used to being at the
"center focus" of so much agitated hate. Maybe I need more
more exposure? [I was using Eastman Super-XX at ASA 400]

Knock it off yourself, PA Tuff Guy.

As to "TROLL," the Coslonaut started this thread with the emotional loading of either Love or Hate attached to morsemanship. That's an "ignition troll" designed to inflame a polarized subject.

As to "believe-ability" Kellie, MANY of your tales of the souse pacific in here leave a great deal of DOUBT as to their veracity.

Oh, and watch your comportment in here. Telling someone to "knock it
off" is the same as telling them to "shut up." Jimmie Noserve no like
that and will mount the pulpit and go into another Sermon on the Antenna Mount against all who tell others to "shut up."

"Morse code gets through when everything else will." - B. Burke

FCC Enacts Internet/Usenet Morse Code Requirement

A.P. INDEXES:
TOP STORIES | NEWS | SPORTS | BUSINESS | TECHNOLOGY | ENTERTAINMENT

Filed at 10:26 a.m. EST

By The Associated Press

WASHINGTON (AP)

The FCC, under pressure to clean up Internet, especially after the Communications Decency Act provisions regarding Internet content regulation were stricken as violating the U.S. Constitution, has decided instead to require a Morse code requirement for Internet users. Citing the success of the Amateur Radio Service and the general belief that its requirement for operators to pass a Morse code proficiency exam and other technical requirements, has kept the A.R.S. "clean", the FCC will enact a 5 word-per-minute requirement for all Internet users. They are leaving open the issue of whether there should be a "codeless" class of Internet user and are soliciting comments on this proposal. Codeless class users could read but not write to newsgroups.

Persons wishing to develop a web site having only links to other web sites having links to other web sites, and so forth, must pass a 13 word-per-minute test and demonstrate proficiency in HTML, the Internet authoring language.

Persons wishing to develop web sites that have actual content, as compared to just links to other web sites, must pass a 20 word-per-minute Morse proficiency test, demonstrate proficiency in HTML and the Java programming language, and show that they have mastery of at least one human language, such as English.

The FCC, which lacks budgetary authority to implement the testing program, has stated that it intends to create Volunteer Examiner programs for Internet applicants.

Maybe a test for the internet would not be so bad...

At least a person should be able to email, instant message, irc chat,
be proficient at google searches and know how to limit searches to
exact sites, etc...

... from what I see the computer illiterates out there cannot even use
email without the children/grand-children assisting them...

Okay Bill, that is an answer that makes good sense to me.

>posting here.

Are you suggesting that you cannot post without responding to trolls?

If your statement is true - why do you stay?

Are you nothing more than bait?

Are your posts simply strings of rants assembled at the pleasure of
others?

You cannot post anything at all of substance without joining in your
own torment?

What drives this sort of behaviour?

>
>In fact, it seems to me that perhaps *you* are posting here with the

You can read, correct? Such as the next paragraph, which contains the
answer:
>
>> It referenced 'wrong' in more of a human sense - i.e. someone
>> doing
>> 'wrong' to others.
>
>Intentional misstatement does wrong to others.

Intentional misstatement is a device to get you arguing. The wrong
done to you in these cases is done by you. The fact that it is
'intentional' indicates this - the facts are immaterial - the medium
itself is the message.

You are your own enemy in these battles.

>
>> Intervening - i.e. 'correcting the wrong', was to
>> stop the actions of the perpetrator of said wrong, thereby protecting
>> the perpetrator (bu getting suckered every time) and the victim (of
>> the resultant bashing). Caine could not help you - he would be too
>> confused.
>
>What was Caine's callsign?

Oh oh. The need to be right can be a painful master, Jim.

The series "Kung Fu" was set in the American Southwest in the 1870s.

Before radio was invented.

Wow! That's one five star education yer packin there, podner......yee haw!

Some day....you might want to try to learn how to use Google too - so you can do your homework before you post!

Instead of having to have others clean up after you. Frequently.

http://www.kungfu-guide.com/overview.html

>
>
>So you're saying that the posts of Len and some others here are turds.
>
>I think you have a point there!

Hope springs anew!

That's why the polishing isn't going too well sometimes.

Then again - some of your posts here are -well- just a tad stinky as well.

Like the German history lesson that you tried to give me earlier in this thread.

That was a turd.

I chose not to polish it.

One cannot polish a turd.

>>
>> Polish - or Avoid.
>>
>> Option 1 - or Option 2.

Yup.

You haven't missed a turd yet.

>
>Yes or no?

Yup.

>
>> Do you possess the wisdom to see things as they are, and
>> recognize a need for change?
>
>You mean to shut up?

Do you equate that with wisdom?

Would that make you appear more wise?

"It is better to sit in silence and appear ignorant, than to open your
mouth and remove all doubt."

Mark Twain, I believe.

Is this the philosophy that you are leaning towards?

>>
>> I see little evidence so far - but there is hope.

Simple - we wouldn't have Jim saying "You're Wrong" over and over and
over again in multiple threads. Just a few times. In legitimate
discussions.

Would you be able to tell? Or has it been too long?

> >> >> >How would such a choice be demonstrated in concrete, practical > >terms?

>"Do not speak out against incorrect information"

You feel that you must respond to every challenge in a thread? You
are incapable of making your point and then ignoring the inevitable
rehashing over and over again? (the trolling part?)

Didn't you say that you had the discipline and the wisdom a while back
in this thread?

Where is it, then? Perhaps you have it, but cannot apply it?

Where'd you put them? In a drawer somewhere with your socks?

Go get 'em - and let's see 'em in action!

YES to CW or NO to CW makes no difference whatsoever Mike.
Not at this stage of the game. Ham radio is a dying hobby, period.

The average age of the USA ham operator is a staggering 64 Years.
There are FIVE TIMES more hams dying off per month than there
are new hams comming into the hobby and license renewals combined.

80% of young people 2-day have text messaging cellphones.
Also there's AOL Instant Messenger or similar Chatroom software
plus Apple IPOD Podcasting and similar technology. (just wait till
the wireless IPOD hits around October 2005 just in time for xmas!)

What young person, apart from the occasional geek, would want to
invest time and money in archaic, obsolete, analog technology based
ham radio in 2005? Oh yes there will be a few, but for the most part
today's young people wouldn't know ham radio from CB and could
not care less either.

Tune across HF any evening and tell me how many young people
you hear on SSB. Most of the guys I hear on 75 Meters are long
retired and most callsigns I recall from just 10 Years ago are either
in the local nursing home or 6 feet under the earth.

Read the handwriting boys. At this rate Ham Radio will be dead
by 2030.

As I have mentioned before, my ex had a 70% hearing loss in each ear and
tinnitus in both ears. Yet he passed the code. He just cranked the volume
up and used headphones. If he can do it, anyone can.

Yes there was and remains a problem, 2 of them One Dyslexia, theother
dyslexiod aphasia. they affect at basic level my use of letters and
langauge. Morse given me chance to blow each letter

Ole Stevie et all like to make fun of me for it

The only good thing I can say for Morse was that trying to learn it
gave a clue to one of the pople that admistered a code test who was
able to guess at and begin the dianostic process at an earlier than was
common then

```
let me see-the mean age for hams is approx 65-if we add 25 years
65+25=90

since the lifespan of men is shorter than females-you are joking right

have you QSO'ed with many 90 year old hams in resthomes-that must be
exciting

Probably because the nature of the "simple" question is negative and is
seeking a like response.

Probably because further dialog confirms an already negative viewpoint
of No Code Techs.

Probably because Dan and Dave chimed in with negative responses as well.

Probably because I have seen many Extras with such attitudes, many of them right here on RRAP.

Probably because Robber's Son keeps asking who chased away the Techs when the answer is so plainly visible.

The nearest 110VAC was several miles away where the REA lines stopped, so I can assure you it was a 6V radio. (Bank of several old 6V auto batteries in parallel in the basement, kept topped off by a windcharger atop the barn.) "Catherdral" may be the wrong term, but the radio was a table-top wood cabinet affair with a pointed round top. Large round dial in the center, with the prominent Zenith "Z" designed into the pointer. Don't remember the band layout, but my recollection is that it went to at least 13 Mc (maybe higher). 4, 8, and 12 Mc marine bands were my favorites, and may have influenced my decision to go to sea as a Navy radioman.

Above E-7? Up to E-7 you can get by on decent performance and fitness
reports, awards and decs, and TIS/TIG.

But beyond E-7, you need an O-6+ benefactor.

And there were 'farm' sets that worked off of 32 volts, some had
vibrator power supplies but some used 32 VDC as the B+. The 32 volt
systems used outlets just like 110vac outlets.

Steve, calling names and stretching out words with lots of extra letters lends nothing to your non-existent credibility.

And you plugging into an aircraft intercom is not communications experience.

I do not beleive you when you claimed having held a leadership position in MARS. Had you ever actually held such a position, you would have been given a letter of appointment. That's how its done. So show it.

Tsk, I know...but the choice of one or two S is optional in use
(depending on the editor).

In English, using one S would tend to have the word pronounced
"foe-cues-ed" while two S would tend to prounounce "foe-cuss-ed."
With one S it also sounds like a nastyword..."foe-cue-ess." :-)

>Shall we assume that the decision has been made?
>
>Option 1?

Nah...he hasn't "chosen" anything but "business as usual."

Jimmie's technique goes something like this:

He picks out phrases, sentences, or (rarely) whole paragraphs
and then asks "pointed questions" as if he is a "prosecuting
attorney" or as the "judge" of this less-than-noble Moot Court.
Then he will belabor those specific points in long, voluminous
postings, probably hoping the subject will get tired, get angry,
make a dumb comment. If a "dumb comment" is made, he will then
belabor THAT in the usual absurb minutae. The subject eventually
just gives up bothering to post and Jimmie feels vindicated; he
has established HE is "right." Smirk time.

If challenged on any point, he will belabor that with/without
misdirection onto similar but not directly related subjects.
Or he will simply state the challenger is "in error," "doesn't
have 'parenting experience'," or just doesn't know as much as
the "judge/prosecutor." That goes into minutae and misdirection
again until the challenger just gives up. More smirks, more
feelings of Jimmie's vindication. He emerges "triumphant."

Now, in his reply to challenges on his partly wrong statement,
plus misdirection into some American national politics (out of
place, but then that doesn't matter to USA amateur extras), he
does NOT acknowledge he was in error of anything. He simply
issues the imperious "you are right" or "you are incorrect" or
(in some mollifying attempt at partial appeasement from another
thread) he STATES "that's not exactly correct!" He has fashioned
his personna into the LAWGIVER, the one who judges but is never,
ever himself judged.

Radio regulation in the USA is governed by the entirety of Title 47, Code of Federal Regulation. Amateur radio is not solely confined to Part 97 of that Title...yet he keeps referring solely to that one Part. [that one Part is available on the ARRL web-site...but in various pieces, albeit complete, on the U.S. Government Printing Office archives page for Titles of the Codes of Federal Regulations] He regards only the ARRL copy as "the reference," thus forgetting several other Parts in Title 47 which do, definitely apply in LAW here.

But, if Jimmie is challenged again, he goes deeper into absurd minutae, perhaps wandering into phrase meanings in the law as if he is one of the Supreme Court judges. [Lawgivers get like that] [in the U.S. Army we called them "barracks room lawyers"] [but Jimmie was never IN the military in the USA] [we don't even know how many children he has "parented"...he won't say, yet demands that of others]

Lawgivers sometimes get lost in their own self-appointed, self-grandiose rhetoric...such as the one who started this particular thread using what amounts to a Consultant to the FCC in the Enforcement Bureau Spectral Enforcement Division...Riley Hollingsworth. Hollingsworth has law credentials. The Lawgiver does not. Hollingsworth is NOT a Commissioner, isn't on any of the Commissioners' special Staffs, yet the Lawgiver makes Riley a big, important guru status. A status almost as great as the ARRL's "CEO" (probably "President for Life" soon), Dave Sumner. One can almost see the editorial page in QST forming as the Lawgiver extolls his mighty rhetoric upon the masses at the beginning of this thread.

Woe be unto the Disbelievers of the Lawgiver, for they shall be forever known as WRRRONNNNGGGGGG.

"Ask not for whom the bel tolls, it tolls for thee, A. G."

[the humor impaired will not notice the "bel" so I won't explain]

Business as usual.

buy, buy,

LenAnderson@ieee.org

> bands ---

Geeez, OK, understood, that's roughly the same way I ran into
on-the-air Morse for the first time. A couple old-maid aunts had a big
wooden console radio which tuned bands above the AM BC band which I
messed with and heard the "beeps and boops". Which did not particularly
light my fires. Listening to the BBC and hams yakking on AM phone did
light my fires.

> we didn't get REA until I was in high school) at about age 8 or 9.

Ye gawds Hans, no 115vac until you were 8-9 years old??! That would
have been in the 1958-59 timeframe and REA had just gotten to your
neighborhood then?? WTF . . ?!! Or were you in Guatemala??

I was in my early twenties at that point in history and already had a
gazillion confirmed and my *grandparents* had been getting around on
'lectric trains and trolly cars most of their lives.

Sheesh: This 'ole city boy can't even start to imagine . . . . ! Talk
about "coming up" in different worlds.

Where did the six volts come from out in your boonies?

> Wanted to know what all those beeps and boops were about on what turned out to
> be the 8 and 12 MC marine bands. Fascinating stuff for a kid thousands of miles
> from any ocean.

Of course, but something is missing here. How did you learn to copy CW
by just *listening* to the stuff?

I've been wracking (what little is left of) my brain about when and how
I started to learn the code. I dimly remember a Christmas around the
end of WW2 when I got a pair of widgets made by, I think, Lionel. They
were battery powered "code buzzers" which were connected by a pair of
the usual cotten-wrapped copper wires normally used between the the
Lionel or American Flyer xfmrs and the clips on the track.

The idea was to connect the two code buzzers located a room or two away from each other and yak via the code with somebody. The code was printed on the box next to the key. Problem was that I didn't have a sombody to join the fun so I buzzed to myself and finally started to get it.

> Ham radio interest came much later, introduced by my roomate as a college

Often houses that had the 32V system were wired with standard 110v
outlets, then when REA came along all one had to do was disconnect from
the 32V system and hook up to REA. Those 32V radios would have 110v
plugs and it isn't too unsual to find one where somone plugged it into
110 volts.

There's no "genitalia fixation" or mocking of your "relingion",
Mark.

Did you not say you participatre in sex with men?

Did you not say you are pagan?

Did you not say you were allegedly drafted into the Army, then
forcibly commissioned into the "chemical corps"...?!?!

Your words, Markie...not mine...

No...It shows I was doing my job in a professional and military
manner.

That's fine for flag rank officers, Markie.

I was not one.

"GIGO" is about right...Nothing but "garbage out" from Mark
Morgan.

THAT was my point, and you do so well substantiating it for me.

More deceitfulness, Brain.

Why do you lie so prolifically?

You mean you need to be a suck-up, don't you, Brain?

Perhaps in the Weather Service of the Blue Crew, but USMC and USN
promotion citeria is very specific.

You misrepresent the character of a deceased honest man.

Why do you do that, Brain? (Sheesh..now I AM "losing it"...I'm
asking a pathological liar why he's lying...Get me beer, someone!)

```

The simple answer to your suggestion that the NCT's have all been chased away is that they've NOT been all chased away.

> Probably because further dialog confirms an already negative viewpoint
> of No Code Techs.

I again insist that this must be a North of the Mason-Dixon line issue. No such "negative viewpoint" exists here.

Maybe because we go out of the way to include them?

> Probably because Dan and Dave chimed in with negative responses as
> well.
>

>
> Probably because Robber's Son keeps asking who chased away the Techs
> when the answer is so plainly visible.

No, it's not.

You insist it's happened. I say it hasn't.

Even casual observation reveals that's not an accurate assessment. Again I acknowledge that that is probably a regional experience.

Why do you continue to defame the character of a deceased honest man?

"...wouldn't time the ####ing time..."

Angry, aren't you?

> The FCC DOES NOT SERVE THE PUBLIC INTREST...(SNIP)

That's your opinion.

However they did, in their best judgement, keep YOU off the public
airwaves, and as far as I am concerned that was worth almost all the
other grief they could possibly promulgate for any radio service.

> (UNSNIP)...the only interest the FCC serves is the BIG companies.

Gee, Todd...there's a couple of LPFM stations near me, and none of
them seem to have any problems with "big companies" >>OR<< the FCC.

> That's all I really have to say because in my opinion
> your nothing but a waste of space, a sadist control freak, with a god

> don't can ahrdly see howthat is possible

I didn't miss anything.

Todd's the one missing the point.

He didn't meet licensing requirements. The FCC said NO. Todd
thinks that "just because" he filed a "waiver" he has a right to an
LPFM license. He doesn't.

> > You just haven't got what it takes to step up to the plate and

Wrong again, Mark. There have been occassions in this forum where
I have made an error, and when shown that error, acknowledged it and
issued an apolgy where due. Ask Cecil, Hans, Kim, etc...

It's not your family's interest, Mark. It's yours.

You need help. Someone needs to get you to it since you won't go
on your own.

> > Do you lie to your wife and kids like you do in here?

> > have that
> > but you don't back it up for anyone else.

Sure I do.

Brain insisted that I was never in MARS and know nothing about it.
I made one error as it pertainted to Chief MARS, and he now claims my
lack of knowledge on MARS is "vast".

I gave him sepcific dates, times, places, callsigns, even military
units of assignment where pertinent.

Then he said, "Oh, I need "DOCUMENTATION".

Whelp, he's got far more information to verify MY claims than any
he's ever provided for any claim he's ever made.

As far as I am concerned, the information's been delivered.

> You don't use our own word
> you make stuff up, or you distort the context, or at best you start
> assume, and if you were ever a maraine you know what ASSuME means

Nothing's made up, Mark.

Even YOU have the resources to verify anything I've ever said in
this forum except that I won't discuss my combat service in the Corps.
If Lennie and Brain want to subsequently say "it didn't happen", well,
they can have fun doing it but they'd still be wrong.

> Now I will never try to stop you from making an ### of yourself, that
> is your right, but you don't have the right to make others make the
> trip with you

Coming from the "Drafted At Age Eight And They Won't Let Me Resign
Colonel In The Chemical Corps..."...?!?!?!

ROTMFFLMMFAO! ! ! ! ! ! ! ! ! ! !

> > As for my affiliation with MARS, well, you have the dates,

>
> No it is evidence of your guilt

Guilt of what?

> > So far you've not made good on substantiating THAT claim.
>
> No need you do that for him

No, I've not.

However Brain HAS made MY point that he's a pathological liar.

Over and over and over and over and.....................

> > Do you not see why it's so easy to prove you a liar, Burke?
>
> I don't. I'll wager he doesn't, since you haven't proven anything.

Sure I have. Repeatedly.

His suggestion that comments I made about how Internet antagonists
like Lennie Anderson have incited people to do the aforementioned
violent acts was a "thinly veiled threat" being one of them.

Brain could defend his accusations then, he can't do it now.

Then we can recycle his "ARES is overblown" comments, followed up
with reams of reports of how ARES teams are being lauded and the
federal government is pouring in $100's of thousands of dollars to
support ARES programs.

Let's not forget his "Unlicensed devices play a major role in
emergency comms" rant, along with his "I was legal DX from Somalia"
stories.

> None even yur membership in Mars, not that I realy doubt it (or care)
> but you have not proved it, You are too lazy to do that you want him to
> prove it for you.
>
> Well I know I will not carry your baggage I doubt brain will either

You're not man enough to carry MY "baggage", Mark, and Brain
couldn't find it.

Brain was given information so he could independently verify it.
I am quote sure that even if I got replacemtn copies of old licenses
and authorizations, he'd claim them "altered" or other such silliness.

He'd have a hard time calling the folks in the various MARS or
USMC offices liars, though.

> > Do these posts need to wind up in your wife's hands so SOMEone can
> > get you into the help you need to stop your erratic behaviour...?!?!
>
> And there is a Blackmail threat Steve

It's only blackmail if I stand to gain from the act, Mark.

Brain (and you, for that matter) are in need of definitive care.
Sometimes it takes the insistance of the family to push a person to do
what's right.

> > (Please don't give me any more of that cock-of-the-walk "You
> > better not.." language either, Brain...You need help...lot's of it...)
>
> More of your genital obsession again

Nope.

Sorry, Mark..."cock" does NOT exclusively refer to male genitalia.

Do some research on what "cock-of-the-walk" means.

Poor Woger. Still think that the Paranoia Remailer's servers are
located on the island of Aruba? Still unable to compute RMS voltage?
Still suffering from negative SWR?

You can find out the truth about all those things and more by simply
going to NIM Busters and asking the experts there.

Oops! I momentarily forgot: You've been banned from there.

: Nice to see you value his words so. Think the CIA is still running
: "anonymous remailers?" BWHAHAHAHAHAHAHAHAHA!!!!!!

Some posters in alt.privacy.anon-server seem to think so. They have
even claimed that the CIA was involved in the Paranoia Remailer
takedown. You know how it goes: The CIA is tasked to keep track of
terrorist communications; the terrorists use the net to keep in touch,
and the CIA and police agencies do things like establishing phony
remailers and compromiseing other remailers in order to track the
terrorists' email.

Woger's been hanging out on the wrong part of the net it seems.

Hi Mike:

I think you know I don't "hate" Morse Code. I, personally, never really wished to try it out; just like I have never really tried SCTV, anything digital (except for APRS--if that can be considered digital), ATV, etc. I think you get my point. Since I have ever first perused this newsgroup, except for a few real jerks, I'd believe that most of "us" who just don't wander into other means of communication--including Morse Code--are pretty much the same as I am. I absolutely support those who use the mode (as I do anyone who uses and/or invents any other modes), am willing to honor the tradition of Morse Code (as I honor the tradition of other steadfast things in amateur radio), and hold no animosity for anyone--OTHER than the "idiots" on both sides of the floor (as it would be stated in political terms :o).

For me, it was never a matter of wanting HF privileges that much, and I learned the 5wpm needed to get the privileges I was happy with. So, could you do me a favor? Please rethink your phrase "Morse Code Haters." I don't think most of us feel that strongly about it.

Analogys are never perfect. But as it goes, we are not allowed to pick
and choose what we need to learn to get the license. If we want the
license, we have to learn what is required.

I won't deny it can be done - obviously, since my problems are similar.
I doubt I'll ever be proficient at Morse though. To get an idea of what
it is like for me, imagine concentrating as hard as you can on
something. Can I do it? Sure. But not for extended periods.

Certainly turning up the headphones helps, but the levels I use are
fatiguing, and they sometimes annoy the other ops.

Yeah, "haters" was the wrong choice of word in retrospect.

Actually it's NOT a "restructuring" proposal as the term has been adopted here
(restructuring of license classes).

Rather it is a proposal to rid us of FCC/ARRL-imposed bandplans.

Strictly speaking, you are correct, Hans.
>
> Rather it is a proposal to rid us of FCC/ARRL-imposed bandplans.

FCC imposes subbands; ARRL and others suggest bandplans. The former are
not voluntary!

In any event, it's possible that any restructuring NPRM would include
provisions from this proposal if FCC thinks it has merit. Which might
slow down the whole NPRM process in the bargain.

No RM number yet, last time I looked.

--

I think it's a terrible idea for a whole bunch of reasons.

Where did the B+ come from? Dynamotor, vibrator, batteries?

Most of the classic windcharger systems I know of were nominally 32
volts. When I lived in a rural part 2-land, windmill towers were still
plentiful, although most held TV antennas.

<N2EY@AOL.COM> wrote

> I think it's a terrible idea for a whole bunch of reasons.

I think it still needs some work, especially the liberal/social-engineering part where they arbitrarily segregate hams to frequency segments based on license classes.

In the republican/conservative spirit of "less government is better government", here is a better proposal:

----------&#65533;----------&#65533;---------

97.1 To get an Amateur Radio license, you are required to pass a technical test to show that you understand how to build simple equipment which meets spectral purity specifications of (.....blah, blah, blah). You will be issued a license and callsign when you pass the test. Transmit your call sign once every 10 minutes when on the air.

97.2 Your power limit is 1.5KW to the antenna.

97.3 Here are your authorized frequency bands. (list)
Stay inside of them.

97.4 Your are encouraged to tinker and experiment and communicate and do public service and talk to strangers in far away lands and launch communications satellites into space and any other cool technical "radio stuff" you may think up. The government doesn't care what mode you use for any of this. (See 97.3)

97.5 Play nice. We'll try to keep the CBers out of your hair. Deliberate interference, unresolved dirty signals, or other asinine behavior on your part will cause Riley Hollingsworth to come and permanently kick your ass off the playground. Have fun.

Love always,
/signed/ FCC

You have made lots of stuff Not in position to say what you made up vs
what you distorted beyond all reason w.r.t. Brain Idon't eneough about
him

>
> Even YOU have the resources to verify anything I've ever said in
> this forum except that I won't discuss my combat service in the Corps.
> If Lennie and Brain want to subsequently say "it didn't happen", well,

A simple lie I don't have those resourses, not without digging for them
at best, and to say I might be able to dig out of yoour lies and
obfucations the data is being generous in assuimng that your aren't
lying win saying I can.

But I digress it is not MY job to prove YOUR Claims. It is not Brain or Lennies Job either. They are YOUR claims YOU back em up

As your Claims of comabt if memory serves (and it may not) you claims to have served under a General with REALLY big ego problems (to go with a his military skills) MacArther when the Chinesse entered that war, not that I neccesaly believe it that but as I recal that was one of your claims

>

>
> Brain could defend his accusations then, he can't do it now.

They are self eveident when combined with your history of making
threats, or murder and of your powers to have someone crimnal
prosecuted etc,

>
> Then we can recycle his "ARES is overblown" comments, followed up
> with reams of reports of how ARES teams are being lauded and the
> federal government is pouring in $100's of thousands of dollars to
> support ARES programs.

One and this is not an atteck on ARES but simple statement of fact, the
Govt pours Millions into sewer studing the contents therein. Being Govt
funded is NOT eveidence that funded program has merit

Two Hams are certainly overblown inthier beliefs of what they do in the
event of disaster. That we have over blown expectation is in some ways
helpful

three recycling trash that you have already distorted at least is about
all you do

>
> Let's not forget his "Unlicensed devices play a major role in
> emergency comms" rant, along with his "I was legal DX from Somalia"

yep

>
> Sorry, Mark..."cock" does NOT exclusively refer to male genitalia.
>
> Do some research on what "cock-of-the-walk" means.

I do know but your choice of that phrase still shows your obcession,
with the comon genital reference is still a siagn of your obcession

We have about 8 cocks of the wlak around the yard, roosters
>

Could well have been 32V --- just assumed 6V based on the batteries Dad had in the cellar. They were wired direct to the radio, not through any outlets. Radio was the only "electric" thing in the house.

Actually only about 3/4-mile. Wildwood School, District 28, one room grades 1-8, but rarely kids in every grade, average enrollment about 10 kids. Teacher was Mrs. Isabelle Schneider. At 9th grade you went to "town school" on a yellow bus. During blizzards the bus didn't take you home, so you stayed at your "storm home" --- all the farm kids were assigned one of those.

Hmmm, not enough "action" or "Radio Hero" stuff, if you stick to this story line. When you spin this story down at the Legion Hall, work in how you saved all the kids, using a 32v hand wired radio.

If that's true, I think it already would have happened. The US is one of only a very few countries which has mandated "mode sub-bands".

Stebie has all the charm and warmth of Godzilla on a bad hair
day...

>And you plugging into an aircraft intercom is not communications
>experience.

Yes, it might be...the ASSISTANT NCOIC of MARS may need to ask
the chief NCOIC of MARS how to tune up a tube transmitter:
"Is it peak the plate and dip the grid or the other way around?"

Important, vital, radio communications to keep democracy safe
in the free world...by handling H&W messages to the folks at
home.

>I do not beleive you when you claimed having held a leadership position
>in MARS. Had you ever actually held such a position, you would have
>been given a letter of appointment. That's how its done. So show it.

Stebie no gots da written orders. His word is his "bond." Of course, the bond papers haven't been filed in this court, but that is just a triviality. :-)

In reality, an ASSISTANT NCOIC position might just be on the regular Morning Report of his Company. The ones actually listed for any station would be the KEY people...first the OIC, then the NCOIC. [Officer In Charge, Non-Commissioned Officer In Charge for the civilian readers]

MARS doesn't normally operate IN the USA ham bands but that seems a minor technicality in here. All is pomp and circumstance and medals and titles with Stebie. In fact, Stebie seems to regard this entire newsgroup as his personal blog to carry on the endless nastygrams he sends chewing out those he no like.

We no gots Stebie papers, no evidence, no proof. We all take his "word" for everything. Stebie RULES. :-)

>
> Yeah, "haters" was the wrong choice of word in retrospect.

No, it wasn't "wrong." It got exactly what you wanted to get
in here...more polarization on a topic already rife with
polarized "opinions" and personal pontifications.

It is no different than the self-ascribed "representative" of ALL
radio amateurs saying a challenger "hates ham radio" when all the
challenger did was dislike the opinion of the "representative."

The hobby activity of amateur radio is supposedly about personal recreation of the hobbyist (which includes personal daydreams of being in a "service to the nation"...if the daydreamer is a bit over the edge). That means they get the OPTION of doing anything they want as allowed by the FCC.

Ya know what? The FCC has long since abandoned any necessity of hams being required by law to show evidence of "CW" contacts in a year's time! [How about that...and...Sunnuvagun!] Every single allocated mode is perfectly optional to use at the licensee's OPTION!

Isn't that "terrible!" OPTION! Why, with all the nastywords and implied impropriety of all those who do not choose the beloved, honored, revered, treasured, adored "CW," all those who don't bother with "CW" ought to turn in their ham licenses and make public apologies for not "holding tradition!"

But, the olde-fahrts still shout and holler for "tradition" and demands to keep the test for "CW" that is adored, treasured, revered, honored, beloved, etc., because "that is how it should be!" [in their tight little fantasy world] Every ham, according to those olde-fahrt wunderkinder of long-ago days, MUST do good morsemanship! :-)

One MUST "show dedication, etc., to the 'amateur community'" by doing as all those olde-fahrts DEMAND. ["it is only right" cry the olde-fahrts] They think they "rule." No problem. Well, one problem...no forwarding address to send all that "dedication and committment" to the "community" as required by the unwritten law...

Meanwhile, the newcomers (who don't seem to count to the olde-fahrts or the league of distinguished, nearly extinguished gentlemen of Newington) are getting IN to amateur radio through the NO-CODE-TEST class. Many more than are "flocking" to the "CW faithful" churches of the lesser-day saints of "CW." They take the OPTIONS available by law. Nearly half of all ham licensees by now...

Option is no failure.

Continue to shun AC and keep the polarization going. Ask them pre-loaded questions.

How many CONSUMER ELECTRONICS radios had "dynamotors," oh great
graduate of the ivy leagues?

Show your "radio history" expertise at work. Remember, CONSUMER
electronics, sold to civilians not the military.

>---
>
>Most of the classic windcharger systems I know of were nominally 32
>volts. When I lived in a rural part 2-land, windmill towers were still
>plentiful, although most held TV antennas.

Oh, my, the great guru of radio was how old circa 1958? Was
the great guru born with radio knowledge already implanted?
Or was familiarity already pre-programmed at birth?

"Not all windmills pumped water" was already stated by Hans.
A cross-country travel NOW will show there are plenty of
windmill structures still up and still doing something. STOP
and ASK for details if you need to show "expertise."

Non-electrified rural communities had all sorts of self-electrical
systems. Open any Sears Roebuck catalog of the 1950s and see.

The "nominal 32 Volt" systems might have been common to MARINE
applications. General Radio Company said so in their description
of their 1950s-era Frequency/Time Standard...which used 16 large
lead-acid batteries in series as AC back-up. One was put into
service at the Ramo-Wooldridge Corporation Calibration Lab when
I worked there in 1958-1960. Helped put it in, did the weekly
checks with the old east coast WWV stations on Saturdays (nice
little overtime addition to paycheck).

There's lots of "experts" on 1950s-era "power systems" in here,
such as the "knowledgeable about military surplus" who claim

WW2 Jeeps had 28 V ignition systems. No problem. They will all have errors which will please your "correctness" syndrome. Feel free to ruler-spank the naughty, sister Nun of the Above.

pump, pump

The US is also one of the few countries with a large and relatively
affluent amateur radio population licensed to use relatively high
powered transmitters.

Canada, IIRC, has less than 1/10th the number of hams as the USA,
spread out across a larger area. Of course Canada also has a
proportionately smaller population. Yet the Canadian HF ham bands are
virtually the same as the US ones. Perhaps Leo can give us a more
precise comparison, and the Canadian amateur power limit.

--

The problems of repeater coordination on 2 meters (a band wider than
all amateur HF/MF bands put together!) show the difficulties of
depending solely on informal agreements. And repeaters are relatively
local!

It seems to me that it's more spectrum-efficient to have like modes
together, rather than mixed.

There's also the robot station situation to consider.

--

IMHO, narrow and wide modes do not coexist well. That alone is a good
reason to have subbands-by-mode, or at least subbands-by-bandwidth, on
the ham bands.

--

btw, Hans, when are you going to submit your restructuring proposal to FCC?

I said most of the hams I knew. I did not say the average ham.

I've QSO'd with several 90+ year old hams. Who says just because they are 90+ that they are in a nursing home? Who says that they are not interesting? I had the pleasure of talking with W5BQU, who was over 100 and he was still quite sharp.

3/4 mile? The schools I went to from Grades 1-12 were a mile away!
Little kids took the bus; after 3rd grade or so we just walked. Grades
1-8 was uphill all the way to school but downhill all the way home.
Grades 9-12 was a little rolling.

We did have 110/220 VAC, though. Sidewalks too! And the RESCO store was
on the way home. I still have some of the parts and books I bought
there.

Again you read in what is not there.

> Probably because further dialog confirms an already negative viewpoint
> of No Code Techs.
>

You read in what is not there. If you had been around for a while, you would know that I have repeatedly expressed positive viewpoints of the no code Techs. There are many of them who are heavily involved in the club to which I belong and contribute a great deal to our club. Several of our officers are no code Techs. Our satellite guru was a no code Tech until he took time out to upgrade. Many of our no code Techs are johnny on the spot in supporting public service events. Several becames ham solely because they were interested in this aspect of ham radio. None of them are whining about how tough it is to learn the code. Many of our public service people have no interest in upgrading and that's no problem. We do not push them to do so as they are getting what they want out of ham radio. Those who wish to upgrade get our full support and help.

> Probably because Dan and Dave chimed in with negative responses as

Again it is only the whiners that get their hackles up not the no code Techs in general.

> Probably because Robber's Son keeps asking who chased away the Techs
> when the answer is so plainly visible.
>

It is not at all "so plainly visible". All of us have reached out to those who wanted/needed help to upgrade. Unfortunately all of us have experienced those "know it all" individuals who think they know more than the experienced amateurs.

I understand that completely. If my ex was practicing code without the headphones, I had to leave not only the room, but that floor of the house. If he was using headphones, I could hear it more than well enough to copy his practice sessions. The point is that he passed the test.

Besides that, Kim, you did what people like myself and Mike and so many others advocate. That is you took the testing in place at the time that was required for the privileges that you wanted. You didn't sit on your hands and wait for the testing procedure to change.

There were a lot of rural areas like that. I lived on a farm in Iowa from the age of 6 months to 10 years old and there was no electricity or running water there. It was kerosene lamps and carry water from the pump. There were electrical lines in the area, just not to our farm. And from the numbers above, I see that I am about 10 years younger than Hans.

Hey Hans, looks like there's a bunch of city slickers in here!

It certainly does many of the techs get tired of being told how we NED
to upgrade, just at at your own words.

My first contact from the ARRL was a letter telling me how I needed to
upgrade

I'll try!

Canadian population - approx. 33 Million.

Current number of Amateur operators: approx. 55 thousand or so....the vast majority reside in Ontario, Quebec and British Columbia (in that order)

Power limits: Basic licence: 250W; Advanced licence: 1KW.

This is a link to the recommended HF bandplans (please note that these are not legislated by government - they are administered and published by the RAC (our equivalent of the ARRL), and adhered to by the Canadian amateur community by 'gentlemen's agreement' (and -um- peer pressure, for those who stray....!)

Out Morse band area tends to be smaller than the US allocation - for example, you'll hear the Trans-Canada Net on LSB at 7.055 MHz.

"Storm homes" sounds like a good idea. In our area, they just cancelled the buses and the farmers came into town on their tractors pulling wagons to get the kids home.

The US also has one of the highest ham populations in the world. And human nature being what it is, there needs to be some type of discipline on the bands as to what goes where.

Nope, never told anyone that they need to upgrade just for upgrading's sake.
I have however helped them learn what privileges are available should they
choose to do so.

> My first contact from the ARRL was a letter telling me how I needed to
> upgrade

Never received such a letter myself and do not know its content so cannot
comment on it.

90% of all Canadians live within 75 miles of the USA, a distance trivial to HF propagation.

> Yet the Canadian HF ham bands are virtually
> the same as the US ones.

Yes, they share the same bands with us, and without arbitrary in-band segments based on mode or bandwidth. On 160M, 80M, 40M, 20M, 17M, 15M, and 12M they are limited to a 6kHz bandwidth signal anywhere inside the band. On 30M they are limited to 1kHz bandwidth, and on 10M they are limited to 20kHz bandwidth.

Since, as you point out, their bands are virtually the same ones we use right next door, certainly we'd know about any problems with their style of regulation.

> the Canadian amateur power limit.

2.25 KW PEP output on SSB, 750W output on other modes. Certainly sufficient to spill outside their southern border.

> It seems to me that it's more spectrum-efficient to
> have like modes together, rather than mixed.

Our HF bands are hardly congested, and as the "worldwide-except-USA" experience shows, hams have pretty well figured out how to share the spectrum without governments imposing mode/bandwidth segments on them.

> IMHO, narrow and wide modes do not coexist well. That alone
> is a good reason to have subbands-by-mode, or at least
> subbands-by-bandwidth, on the ham bands.

Morse (a "narrow" mode) is allowed on all MF/HF frequencies except the 60M channels. Have you seen any problems caused by that?

In Canada SSB is allowed anywhere on any MF/HF frequency. Have you heard reports of problems with that? Europe (much more densly populated than US or Canada) doesn't seem to have mode coexistance problems.

It's time FCC quits micromanaging our assigned spectrum.

> btw, Hans, when are you going to submit your restructuring proposal to
> FCC?

It's in their hands.

Industry Canada RIC-2, Article 10.2 states this:

" The holder of an Amateur Radio Operator Certificate with Basic and Advanced Qualifications is limited to a maximum transmitting power of:

(a) where expressed as direct-current input power, 1,000 W to the anode or collector circuit of the transmitter stage that supplies radio frequency energy to the antenna; or

(b) where expressed as radio-frequency output power measured across an impedance-matched load,

(i) 2,250 W peak envelope power for transmitters that produce any type of single sideband
emission, or

(ii) 750 W carrier power for transmitters that produce any other type of emission."

Been following this thread with increased interest....just have to throw in my two cents worth.

Years ago.,..must have been in the mid to late 50s I would spend time with my Aunt Kay and Uncle Frank. They lived in the old original family home in Leetonia Ohio. No indoor plumbing, no heat, a shed for the Model T that still ran, and a special place with the Sears catalog.

Winters were the most interesting...with the feather beds and pillows and quilts so thick it would bury my little body so deep I looked like I was part of the bed.

Frozen bed pans, contemplation of the ''quick'' run to the Sears catalog shed in the middle of the night. Brrrrrrrrrrrr......

And yes I had to walk to school ....but it was only a mile or so.

That is the full version alright - which applies to our Advanced
licence. I prefer to use the 'input to the final' limits myself, as
they are easily calculated using the plate voltmeter and ammeter.

RIC-2's wording is odd - 10.2 refers to the holder of 'both the Basic
and Advanced" license. As you cannot hold the Advanced without first
obtaining (and continuing to hold - you collect the whole set up
here!) the Basic, these are therefore the limits for holders of the
Advanced licence.

The limits for those holding only the Basic licence are covered under
10.1:

10.1 Amateur Radio Operator Certificate with Basic Qualification
The holder of an Amateur Radio Operator Certificate with Basic

Qualification is limited to a maximum transmitting power of:

(a) where expressed as direct-current input power, 250 W to the anode or collector circuit of the transmitter stage that supplies radio frequency energy to the antenna; or

(b) where expressed as radio-frequency output power measured across an impedance-matched load,

(i) 560 W peak envelope power for transmitters that produce any type of single sideband emission, or

(ii) 190 W carrier power for transmitters that produce any other type of emission.

I should have clarified that I was referring to 'input power' in my reply - my omission there!

73, Leo

Sounds like an excerpt from a religious catechism!

Is "human nature" different in the USA? For that matter, is "human nature" different between 1.8 and 2.0 MHz, where US hams themselves provide the "type of discipline" to sort things out without FCC micromanaging it?

Pactor is already in the HF bands, it's a royal pain in the tush and the FCC will probably bring it's use under control based on all the griping about it.

Considering the rapid pace of development work in the field of high-speed wireless comms I expect it'll become technically much easier as time goes on to get some form or another of wireless broadband hardware running in the HF ham bands. Which would immediately raise more hell on the bands than anything we've seen in the modern era. Which it hasn't and it won't because those modes are not allowed to happen under the current regs. So I disagree with your "unregulated equal opportunity mode playground" concept.

> The US is one of only a
> very few countries which has mandated "mode sub-bands".

No counter, we've been very pointedly marching to our own drummer since 1776 and I sure hope we never become international sheep.

We have a whole pile of sweeping "restructuring" schemes before the FCC and everybody is all atwitter over the minutia and their parochial hot buttons, etc. The usual. Lotta nonsense, I have yet to read one of 'em which if implemented wouldn't make conditions on the bands *worse* in some way or another than what we have now. The bands ain't broken, why are we so hell-bent on "fixing" something which ain't broke??

Bleh.

My wife is a city girl. After we were married we spent some time (in February) visiting the folks on the farm. First morning it was a wonder to see her hurrying to get dressed before parts were frozen. Then I asked her to toss me my shirt and trousers and I demonstrated how to get fully dressed >BEFORE< crawling out from under the quilt!

Of course. Passing the test is the main point. My XYL-who has very,
very, good hearing, can actually listen to the television by the
residual sound coming out of my headphones! Problem is it is a little
biased toward the high frequencies that way. Most of the time we
compromise and turn on the closed captioning.

The acuteness of her hearing is such is that she can hear soap bubbles
in the dishwater "popping" in the living room, which is about thirty
feet from the kitchen.And I cannot hear them under any circumstances. We
both feel bad for each other! 8^)

Within 75 miles of the border, maybe. But not within 75 miles of most
US hams.

But they do have arbitrary bandwidth limits.

They have far fewer hams than the USA, spread out over a larger area.

If they're not congested, why change the rules?

> and as the "worldwide-except-> USA" experience

What works in the country (low-density-of-hams places) won't
necessarily work in the city (high-density-of-hams places).

An analogy:

Most of the rest of the developed world places far more restrictions on
the ownership of firearms than the USA. And they have far less violent
crime, too. Since that seems to work for them, would you propose the
USA adopt such restrictions?

> channels. Have you seen any problems caused by that?

Nope - because Morse operators, in general, voluntarily stay out of the
'phone/image subbands.

> In Canada SSB is allowed anywhere on any MF/HF frequency. Have > you heard
> reports of problems with that?

I've experienced problems with that personally on 40 meters, from hams
both north and south of the USA. Region 2 hams, who have 7000 to 7300,
but operate high-power SSB on 7050 and lower.

'Bandplan? We don't need no steenkin' bandplan!'

> Europe (much more densly populated than US or
> Canada) doesn't seem to have mode coexistance problems.

How many hams in Europe? How many with HF stations?

> It's time FCC quits micromanaging our assigned spectrum.

I disagree.

The proposal is similar to the idea of allowing walkers, runners,
skateboarders, cyclists, motorcycles, cars, light trucks, buses and 18
wheelers to all use the interstates - with no speed or lane limits.
>
> > btw, Hans, when are you going to submit your restructuring

You mean it was formally submitted as a restructuring proposal in the
past year or two?

Or do you mean your comments of several years ago?

So? we concentrate on the group of folks that have the TIME to do Ham Radio
these days. The retired or soon to be retired group. Let the youth text
all they want, chase women, find drugs....so what.

> 80% of young people 2-day have text messaging cellphones.

Ham Radio is and always has been a group of radio geeks. Only recently has
this become a "problem". I see no problem with a much smaller, more
dedicated group. We don't need 700,000 licensed hams if only a small

percentage are actually licensed. As a matter of fact I believe you will find that the membership of the ARRL are the REAL ACTIVE AMATEURS. Not the give a way Tech ticket. These are the folks that wanted a free cell phone. Go for it.
Real hams know what this hobby/service is supposed to be. The rest of you are at the bottom of the learning curve.

Perhaps if you would pay attention to those that have been there and KNOW what its about....your life would be a bit easier (?).

Which is exactly how 75 has been since the 1950s. Or earlier for all I know.

YOUR POINT IS?

> Read the handwriting boys. At this rate Ham Radio will be dead
> by 2030.
>
No it wont. Changed.....but not dead. You of course will be long gone. Good riddance.

I talk with a lot of late 80 and early 90 year old hams. You need to wake
up and smell the roses me boy.
